Abstract

Explicit formulae for the Bézier coefficients of the constrained dual Bernstein basis polynomials are derived in terms of the Hahn orthogonal polynomials. Using difference properties of the latter polynomials, efficient recursive scheme is obtained to compute these coefficients. Applications of this result to some problems of CAGD is discussed.

AMS classification: Primary 41A10. Secondary 65D17, 33D45

Keywords: Dual Bernstein basis; Constrained dual Bernstein basis; Bézier polynomial form; Jacobi polynomials; Hahn polynomials.
