Since January 2020 Elsevier has created a COVID-19 resource centre with free information in English and Mandarin on the novel coronavirus COVID-19. The COVID-19 resource centre is hosted on Elsevier Connect, the company's public news and information website.

Elsevier hereby grants permission to make all its COVID-19-related research that is available on the COVID-19 resource centre - including this research content - immediately available in PubMed Central and other publicly funded repositories, such as the WHO COVID database with rights for unrestricted research re-use and analyses in any form or by any means with acknowledgement of the original source. These permissions are granted for free by Elsevier for as long as the COVID-19 resource centre remains active.
Impact of lockdown on learning status of undergraduate and postgraduate students during COVID-19 pandemic in West Bengal, India

West Bengal

ABSTRACT

To assess the impact of lockdown amidst COVID-19 on undergraduate and postgraduate learners of various colleges and universities of West Bengal. An online survey was conducted from 1 May to 8 May 2020 to collect the information. A structural questionnaire link using ‘Google form’ was sent to students through WhatsApp and E-mail. A total of 232 students provided complete information regarding the survey. The simple percentage distribution was used to assess the learning status of the study participants. During the lockdown period, around 70\% of learners were involved in e-learning. Most of the learners were used android mobile for attending e-learning. Students have been facing various problems related to depression anxiety, poor internet connectivity, and unfavorable study environment at home. Students from remote areas and marginalized sections mainly face enormous challenges for the study during this pandemic. This study suggests targeted interventions to create a positive space for study among students from the vulnerable section of society. Strategies are urgently needed to build a resilient education system in the state that will ensure to develop the skill for employability and the productivity of the young minds.

1. Introduction

The novel coronavirus disease (COVID-19) first appeared in Wuhan city of China at the end of last year. Rapid worldwide spreading of COVID-19 prompted the World Health Organization (WHO) to declare it as ‘pandemic’ on 11 March 2020 (WHO, 2020; Pelmin, 2020). Most of the governments around the world have initiated a common goal to curb the spread of this highly contagious disease by imposing lockdown, social/physical distancing, avoiding face-to-face teaching-learning, and restrictions on immigration (Gonzalez et al. 2020). Around 600 million school-going learners are affected across the world due to the closing down of educational institutions (Goyal, 2020). UNESCO (2020) has reported that around 320 million learners are affected in India, of which about 34 million belonged to the tertiary level of education.

The first COVID-19 positive case has been reported in India (Kerala) on 30 January 2020. Currently, India has been experiencing sparkled growth in COVID-19 cases. As of 18 June 2020, India has reported 160,384 active cases, 194,324 recovered cases, and 12,237 death cases (MoHFW, 2020). The government of India along with various state governments have initiated several strategies to control the spread of the disease. Since 25 March, India has observed four phases of nationwide lockdown, which was extended up to 31 May 2020. The ongoing lockdown (fifth phase) is further extended till 30 June 2020 only in containment zones along with essential services are resuming in a planned manner starting from 8 June 2020.

The closures of the educational institution due to the outbreak of COVID-19 lead to an unprecedented impact on education. During the lockdown, teachers are instructed to teach through online learning platforms (Abidah, Hidaayatullaah, Simamora, Fehabutar, & Mutakinati, 2020). Raju (2020) argued that there is a need to adopt innovative teaching for continuing education and to overcome mental stress and anxieties during the lockdown. The outbreak of COVID-19 results in the digital revolution in the higher education system through online lectures, teleconferencing, digital open books, online examination, and interaction at virtual environments (Strielkowski, 2020;
3.1. Participant's characteristics

3. Results and discussion

3.1. Participant’s characteristics

Table 1 displays the profile of the study participants. Of 232 students, almost two-thirds of them were aged below 22 years with a median age of 21 years. The number of male and female students was equal in the sample. Over one-third of the students (35.8%) belonged to the ‘general’ social group. The majority of them were affiliated to the Hindu religion (84.1%), resided in rural areas (70.7%), and had a family income of less than INR 20,000 (65.1%). Most of the students were from the Arts academic background (73.3%). The educational movement of students across different districts of West Bengal is depicted in Table 2. The highest proportion of students was from the Malda district (34.5%), followed by Darjeeling (12.9%) and Dakshin Dinajpur (11.2%). Moreover, the highest concentration of students was found in Malda as an institutional district (42.2%), followed by Darjeeling (32.8%) and Nadia (8.6%). Malda and Darjeeling districts are considered as educational hubs in North Bengal. A large number of colleges and the existence of universities in these two districts constitute a concentration of a substantial proportion of students in this region.

3.2. Knowledge and attitudes regarding COVID-19

Table 3 shows the knowledge and attitudes of students about this current public health emergency. Of 232 participants, 98 students (42.2%) heard about this disease in January 2020. Over half of the students (57.8%) were got information about COVID-19 from social media, which indicates their awareness of various facts about the disease. The majority of the students (81.5%) reported that they were staying in relative’s home, rented house, mess, and as a paying guest) were facing some difficulties related to financial (26.5%), food (51%), and health (22.5%).

3.3. Learning status and academic sphere during the lockdown

Several questions were asked to trace out the learning status during lockdown that includes modes of learning, coverage of syllabus, time...
Among the surveyed students who were attending online classes (n = 185), only 26 (14.1%) students were attending online classes daily, while 54% of them were attending online classes less than 3 days per week. Most of the respondents (85.8%) used android mobile for attending e-learning and another 14.2% of students used their laptops or computer for e-learning purposes. Although 73.7% of students used their android mobile for e-learning and 5.3% of students hired gadgets from family members to attend classes at the time of their learning. Fewer (0.9%) students had enriched the subjective knowledge by hiring e-learning gadgets from neighbors. The initiation or conducting digital teaching by teachers using various digital platforms during this lockdown period due to COVID-19 indicates the continuation of the teaching-learning process in this critical situation. University Grant Commission (UGC) and the Higher Education Department of West Bengal instructed to the academic institutions to continue the teaching-learning process through digital platforms. In such a situation, teachers are informing their students to participate in digital classes. In the present study, about 13.4% of students reported that their home tutors contacted them for digital learning. Another 15.5% of students are interested to involve in digital learning by a conversation with their friends. It is also reported that most of the learners (73.7%) were not interested to involve in digital platforms for the study before the COVID-19 outbreak (Table 5).

### 3.4. Information about online classes

Among the surveyed students who were attending online classes (n = 185), only 26 (14.1%) students were attending online classes daily, while 54% of them were attending online classes less than 3 days per week. Most of the respondents (85.8%) used android mobile for attending e-learning and another 14.2% of students used their laptops or computer for e-learning purposes. Although 73.7% of students used their android mobile for e-learning and 5.3% of students hired gadgets from family members to attend classes at the time of their learning. Fewer (0.9%) students had enriched the subjective knowledge by hiring e-learning gadgets from neighbors. The initiation or conducting digital teaching by teachers using various digital platforms during this lockdown period due to COVID-19 indicates the continuation of the teaching-learning process in this critical situation. University Grant Commission (UGC) and the Higher Education Department of West Bengal instructed to the academic institutions to continue the teaching-learning process through digital platforms. In such a situation, teachers are informing their students to participate in digital classes. In the present study, about 13.4% of students reported that their home tutors contacted them for digital learning. Another 15.5% of students are interested to involve in digital learning by a conversation with their friends. It is also reported that most of the learners (73.7%) were not interested to involve in digital platforms for the study before the COVID-19 outbreak (Table 5).

### 3.5. Platforms for online classes, materials sharing, and evaluation

It is found that the students were using various platforms for e-lectures, study material sharing and learning evaluation, such as the Zoom app, Team link, YouTube live, Skype, Google meets/hangout, Google classroom, WhatsApp, etc. (Table 6). The results also show that most of the respondents (34.2%) used the Zoom app for attending online classes or e-lectures, followed by Google classroom (33.4%) and YouTube live (14.7%). The learners also followed many platforms for getting study materials during this lockdown period. It is observed that students were more likely to study through shared study materials than attending online lectures mainly due to poor internet connectivity. The majority of the respondents (39.4%) used the WhatsApp group for getting study materials from teachers and as well as friends and 31.8% of students used Google Classroom for this purpose. However, fewer learners followed institutions/teachers’ website and YouTube lives for study materials. Teachers used many platforms not only for digital teaching and learning but also for learning-evaluation very quickly through WhatsApp group, Google classroom, Google form, Microsoft Kaizala, and so on. The learning of the respondents mostly evaluated through the WhatsApp group (40.5%), followed by Google classroom (24.9%). Additionally, students learning status was also evaluated through Google form (8.0%). It is worth mentioning to report

### Table 3

Knowledge and attitudes regarding COVID-19.

| Knowledge and attitudes                          | Frequency (n) | Percentage (%) |
|-------------------------------------------------|---------------|----------------|
| Time when heard about COVID-19                  |               |                |
| January 2020                                    | 98            | 42.2           |
| February 2020                                   | 69            | 29.7           |
| March 2020                                      | 65            | 28.1           |

| Place residing during the lockdown              |               |                |
| At own home                                     | 189           | 81.5           |
| Other places (i.e. relative home, mess, or rented house) | 43          | 18.5           |
| Difficulties facing during lockdown (who are not at home) | | |
| Financial                                       | 13            | 26.5           |
| Food                                            | 25            | 51.0           |
| Health                                          | 11            | 22.5           |

### Table 4

Learning status and academic sphere during the lockdown.

| Variables                      | Frequency (n) | Percentage (%) |
|--------------------------------|---------------|----------------|
| Mode of learning               |               |                |
| Both textbook and online       | 88            | 37.9           |
| Online studying                | 73            | 31.5           |
| Reading textbook with own effort | 71          | 30.6           |
| Syllabus covered (%)           |               |                |
| < 30                           | 91            | 39.2           |
| 30–50                          | 57            | 24.6           |
| > 50                           | 27            | 11.6           |
| Just exam completed            | 32            | 13.8           |
| Not yet completed exam         | 25            | 10.8           |
| Following e-pathshala for study materials | | |
| Yes                            | 49            | 21.1           |
| No                             | 155           | 66.8           |
| Don’t know                     | 28            | 12.1           |
| Time spending for study during the lockdown | | |
| Less than normal situation     | 126           | 54.3           |
| More than a normal situation   | 39            | 16.8           |
| Same like a normal situation   | 67            | 28.9           |
| Separate reading room for study|               |                |
| Yes                            | 129           | 55.6           |
| No                             | 103           | 44.4           |

### Table 5

Information about online classes.

| Variables                              | Frequency (n) | Percentage (%) |
|----------------------------------------|---------------|----------------|
| Online classes attended per week       |               |                |
| Above 3 days per week                  | 59            | 31.9           |
| Below 3 days per week                  | 100           | 54.0           |
| Daily                                  | 26            | 14.1           |
| Gadgets for attending online classes   |               |                |
| Android mobile                         | 182           | 85.8           |
| Laptop or Computer                     | 30            | 14.2           |
| Possess of Gadgets for online classes  |               |                |
| Own                                    | 171           | 73.7           |
| Hired from neighbor                    | 2             | 0.9            |
| Hired from family members              | 12            | 5.3            |
| Persons conducted online classes at lockdown | | |
| Institution’s teachers                 | 155           | 64.9           |
| Conversation with friends              | 37            | 15.5           |
| Home tutors                            | 32            | 13.4           |
| Others (family members, relatives)     | 15            | 6.2            |
| Attended online classes before the outbreak of COVID-19 | | |
| Yes                                    | 61            | 26.3           |
| No                                     | 171           | 73.7           |
that over one-fourth (25.7%) of students’ learning status was yet to be evaluated.

3.6. Opinion regarding academic decisions and UGC recommendations

Table 7 shows the opinion of students regarding academic decisions and UGC recommendations during lockdown phases. Out of 232 students, 123 students agreed on the government’s decision for the opening of academic institutions on June 10, 2020. Over one-third of the students (36.2%) did not know about the UGC committee report regarding academic spheres, whereas 148 (63.8%) students had known about UGC report towards academic institutions. Most of the study participants (58.2%) reported a positive response on recommendations of UGC’s proposed academic calendar whereas near about one-fourth students (27.6%) did not know about it. More than half of the students (52.6%) expressed their agreement on UGC recommendation regarding the examination system, evaluation pattern, research, and field study, whereas almost one-third of the students (31.0%) did not know about this UGC recommendation.

3.7. Impact of COVID-19 on economic condition and educational attendance

Out of 232, 181 students reported that their economic condition will be affected by the COVID-19 pandemic and 178 students reported that low family income amidst COVID-19 would have a negative impact on their education. Furthermore, 176 students thought that the current pandemic may cause their educational discontinuation (Table 8).

3.8. Problems related to study during the lockdown

In this lockdown period, it was reported that learners were mostly suffering from stress, depression, and anxiety (42.0%). The students were also facing problems related to poor internet connectivity (32.4%), followed by the absence of a favorable environment to study at home (12.6%). Students residing in rural and remote areas may face poor internet connectivity. Moreover, poor economic conditions might be a reason for the unfavorable environment and lack of separate room for their study (Table 9).

It should be mentioned that the online learning process is often discriminatory. Our study also found that many students face enormous challenges in e-learning and a substantial proportion of students could not attend online classes. Students from remote areas and marginalized sections mainly denied online learning due to the lack of electricity and poor internet connectivity. Poverty further exacerbates the problem of the digital learning process in this unwanted crisis period.

4. Concluding remarks

The lockdown amidst COVID-19 has made significant disruptions in academic activities. The present study assessed the learning status of undergraduate and postgraduate students during this pandemic. Although a substantial proportion of students are using digital platforms for learning, many of them face huge challenges in online study. The present study assessed the learning status of undergraduate and postgraduate students during this pandemic. Although a substantial proportion of students are using digital platforms for learning, many of them face huge challenges in online study. Our study has suggested the following recommendation to the
government, policymakers, and institutional authorities:

There should be made a uniform academic plan for the universities and colleges and also initiate a proper Education Continuity Plan (ECP) to continue the learning process during this pandemic. The infrastructural facilities should be available to the education institutions which can regulate the digital learning process during future health emergencies. There is a need to ensure adequate funding for the improvement of the education system and to provide capacity development training to the stakeholders of higher education institutions. Interventions should be initiated through a targeted approach to create a positive space for study among the students from the vulnerable section of society.

At this critical period, the open-source digital learning and learning management system could be adopted by the institutional teachers to conduct online learning. Finally, the vital multi-prolonged strategies are urgently needed to build a resilient education system in the state that will ensure to develop the skill for employability and the productivity of the young minds.
