Supplementary figure 1. Venn diagrams of differentially expressed genes shared among strains. A). Venn diagram of all DEGs per strain. B). Venn diagram from all up-regulated genes per strain. C). Venn diagram from all down-regulated genes per strain. From 78 DEGs shared between SE-Sto and iso-1 (A), only 3 are up-regulated in the two strains (B) and none is down-regulated in the two strains (C). Thus, genes shared between these two strains show opposite expression patterns.
