ESM Fig. 3

Determination of cardiac triacylglycerol and glycogen content in response to HFD intervention.

(a, c) WT (white bars), Lxrα-Tg (black bars). (a) Cardiac triacylglycerol; n=5-7/group. (b) Representative LV histological sections stained with Oil red O for the detection of neutral lipids. (c) Cardiac glycogen content; n=6/group. Data are means ± SEM; p=NS.
