HYERS–ULAM STABILITY FOR SECOND ORDER LINEAR DIFFERENTIAL EQUATIONS OF CARATHÉODORY TYPE

MASAKAZU ONITSUKA

Abstract. This study deals with the Hyers–Ulam stability (HUS) of the second order linear differential equations \( x'' + \alpha x' + \beta x = f(t) \) without the assumption of continuity of \( f(t) \). In particular, the main purpose of this study is to find a specific exact solution near the approximate solution, and the best HUS constant. Furthermore, the instability is also discussed, and a necessary and sufficient condition is obtained. Finally, a specific application example and a numerical simulation are presented.

Mathematics subject classification (2020): 34A12, 34A30, 34D10, 34H05.

Keywords and phrases: Hyers–Ulam stability, linear differential equation, Carathéodory type, control system, best HUS constant.
