### Data extraction

#### 1. General Information

| Record title  | First few characters of primary study author’s name |
|---------------|---------------------------------------------|
| Person extracting |                                           |
| Date          | Of study publication                         |
| Study Title   |                                             |
| Authors       | Including lead author contact details        |
|               | Possible conflicts of interest               |

#### 2. Study method/characteristics

| Design       | Cohort – prospective or retrospective        |
|--------------|----------------------------------------------|
| Setting      | May refer to hospital/community, inpatient/outpatient, rural/urban etc. |
| Location     | Country and region                           |
| Participants | age (range; mean), gender (male n, %; female n, %), any other relevant characteristics |
| Exposure(s)  | Latency from vaccine to myositis symptoms, which type of vaccine, |

| 3. Primary Outcome |
|-------------------|
| Myositis after COVID-19 vaccine (symptoms, biopsy, antibodies, diagnosis, treatment) |

| 4. Secondary Aims |
|-------------------|
| Did paper assess predictors of myositis? |
| What were the findings? Description for results |

| 5. Quality Assessment |
|-----------------------|
| JBI Cohort Study Checklist score |
