VIGNETTES
For female participants, the vignette for suicide ideation talked about a girl with the name Sarah and for depression with the name Emily. For all other participants, the vignette for suicide ideation talked about a boy with the “name” Joe and for depression with the name Michael. These are names common among youth and young adults in the Indian American community.

Suicide Ideation
"[Name] has been thinking that life is not worth living, especially when he is alone. He feels like no one really loves him and that his friends and family would be happier if he were not around. He thinks a lot about death and dying, and has even thought about how he would end his life. He has had these thoughts on and off for the past month.

Depression
"For the past several weeks, [Name] has been feeling sad almost every day. He has lost interest in things he usually enjoys like playing basketball and hanging out with friends. [Name] does not want to talk about his feelings with anyone, avoids people and wants to be left alone. He doesn’t eat very much during the day, and he often stays up until late at night because he can’t sleep. [Name] is tired most of the day, skips meals and has trouble concentrating. [Name]’s self-confidence is very low since he stopped playing basketball and he is struggling at school, but he doesn’t feel like he has the energy to do much of anything."
SURVEY DESIGN

Appendix Figure 1. VAS survey question

**VALUING EMILY’S HEALTH TODAY**

The following section will present a case study about the health status of a girl named Emily. The case study will be described to you using both a voice recording and a short text. You will be able to hear and or read the text of what she says. After the case study, you will be asked to rate Emily’s health state. There are two case studies in total.

"For the past several weeks, Emily has been feeling sad almost every day. She has lost interest in things she usually enjoys like playing basketball and hanging out with friends. Emily does not want to talk about her feelings with anyone, avoids people and wants to be left alone. She doesn’t eat very much during the day, and she often stays up until late at night unable to sleep. Emily is tired most of the day, skips meals and has trouble concentrating. Emily's self-confidence is very low since she stopped playing basketball and she is struggling at school, but she doesn’t feel like she has the energy to do much of anything."

---

We would like to know how good or bad you think Emily's health is TODAY.

This scale is numbered from 0 to 100:

100 means the best health you can imagine for Emily.

0 means the worst health you can imagine for Emily.

Please move the slider to indicate how you think Emily’s health is TODAY.

0 is the worst

| 0 | 10 | 20 | 30 | 40 | 50 | 60 | 70 | 80 | 90 | 100 |
|---|----|----|----|----|----|----|----|----|----|-----|

100 is the best
RESULTS

Box-Whisker Plots of QoL and Age
