Abstract. This text describes the content of the Takagi Lectures given by the author in Kyoto in 2017. The lectures present some aspects of the theory of sharp thresholds for Boolean functions and its application to the study of phase transitions in statistical physics.

Keywords and phrases: percolation, discontinuous phase transition

Mathematics Subject Classification (2010): 82B43, 82B27

* This article is based on the 19th Takagi Lectures that the author delivered at Research Institute for Mathematical Science, Kyoto University on July 8 and 9, 2017.
