## PRISMA-DTA Checklist

| Section/topic | # | PRISMA-DTA Checklist Item                                                                                                                                                                                                 | Reported on Page Number/Line Number | Reported on Section/Paragraph |
|---------------|---|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------|-----------------------------|
| **TITLE/ABSTRACT**                                                                                     |                                            |                                                                                                                         |                                    |                              |
| Title         | 1 | Identify the report as a systematic review (+/- meta-analysis) of diagnostic test accuracy (DTA) studies.                                                                                                                   | Page 1/Line 2-3                   | Title/Paragraph 1           |
| Abstract      | 2 | Abstract: See PRISMA-DTA for abstracts (Table 2).                                                                                                                                                                       | Page 2-3/Line 36-64              | Abstract/Paragraph 1-4      |
| **INTRODUCTION**                                                                                         |                                            |                                                                                                                         |                                    |                              |
| Rationale     | 3 | Describe the rationale for the review in the context of what is already known.                                                                                                                                           | Page 5/Line 107-109              | Introduction/Paragraph 5    |
| Clinical role of index test |                      | State the scientific and clinical background, including the intended use and clinical role of the index test, and if applicable, the rationale for minimally acceptable test accuracy (or minimum difference in accuracy for comparative design). | Page 4-5/Line 89-105             | Introduction/Paragraph 3-4  |
| Objectives    | 4 | Provide an explicit statement of question(s) being addressed in terms of participants, index test(s), and target condition(s).                                                                                           | Page 5/Line 109-110              | Introduction/Paragraph 5    |
| **METHODS**                                                                                              |                                            |                                                                                                                         |                                    |                              |
| Protocol and registration                               | 5 | Indicate if a review protocol exists, if and where it can be accessed (e.g., Web address), and, if available, provide registration information including registration number.                                                    | No registration                  |                              |
| Eligibility criteria                                    | 6 | Specify study characteristics (participants, setting, index test(s), reference standard(s), target condition(s), and study design) and report characteristics (e.g., years considered, language, publication status) used as criteria for eligibility, giving rationale. | Page 6/Line 130-147              | Methods/Paragraph 3-5       |
| Information sources                                     | 7 | Describe all information sources (e.g., databases with dates of coverage, contact with study authors to identify additional studies) in the search and date last searched.                                             | Page 5-6/Line 120-128             | Methods/Paragraph 2         |
| Search                                                  | 8 | Present full search strategies for all electronic databases and other sources searched, including any limits used, such that they could be repeated.                                                                     | Page 5-6/Line 120-128             | Methods/Paragraph 2         |
| Study selection                                         | 9 | State the process for selecting studies (i.e., screening, eligibility, included in systematic review, and, if applicable, included in the meta-analysis).                                                              | Page 6/Line 130-147              | Methods/Paragraph 3-5       |
| Data collection process                                 | 10| Describe method of data extraction from reports (e.g., piloted forms, independently, in duplicate) and any processes for obtaining and confirming data from investigators.                                              | Page 6-7/Line 149- 155           | Methods/Paragraph 6         |
| Definitions for data extraction                         | 11| Provide definitions used in data extraction and classifications of target condition(s), index test(s), reference standard(s) and other characteristics (e.g. study design, clinical setting). | Page 6-7/Line 149- 155           | Methods/Paragraph 6         |
| Topic                                      | Section | Description                                                                                                                                                                                                 | Page/Line       | Methods/Paragraph |
|--------------------------------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|-------------------|
| Risk of bias and applicability             | 12      | Describe methods used for assessing risk of bias in individual studies and concerns regarding the applicability to the review question.                                                                      | Page 7/Line 157-175 | 7-9               |
| Diagnostic accuracy measures               | 13      | State the principal diagnostic accuracy measure(s) reported (e.g. sensitivity, specificity) and state the unit of assessment (e.g. per-patient, per-lesion).                                                      | Page 8/Line 179-194 | 10-11             |
| Synthesis of results                       | 14      | Describe methods of handling data, combining results of studies and describing variability between studies. This could include, but is not limited to:  a) handling of multiple definitions of target condition.  b) handling of multiple thresholds of test positivity.  c) handling multiple index test readers.  d) handling of indeterminate test results.  e) grouping and comparing tests.  f) handling of different reference standards. | Page 8-9/Line 187-210 | 11-13             |
| Meta-analysis                              | D2      | Report the statistical methods used for meta-analyses, if performed.                                                                                                                                           | Page 7-9/Line 177-210 | 10-13             |
| Additional analyses                        | 16      | Describe methods of additional analyses (e.g., sensitivity or subgroup analyses, meta-regression), if done, indicating which were pre-specified.                                                               | Page 8/Line 179-185 | 10               |
| RESULTS                                    |         |                                                                                                                                                                                                             |                 |                   |
| Study selection                            | 17      | Provide numbers of studies screened, assessed for eligibility, included in the review (and included in meta-analysis, if applicable) with reasons for exclusions at each stage, ideally with a flow diagram. | Figure 1         |                   |
| Study characteristics                      | 18      | For each included study provide citations and present key characteristics including:  a) participant characteristics (presentation, prior testing).  b) clinical setting.  c) study design.  d) target condition definition.  e) index test.  f) reference standard.  g) sample size.  h) funding sources. | Table 2          |                   |
| Risk of bias and applicability             | 19      | Present evaluation of risk of bias and concerns regarding applicability for each study.                                                                                                                      | Page 10/Line 234-250 | 5-6               |
| Results of individual studies              | 20      | For each analysis in each study (e.g. unique combination of index test, reference standard, and positivity threshold) report 2x2 data (TP, FP, FN, TN) with estimates of diagnostic accuracy and confidence intervals, ideally with a forest or receiver operator characteristic (ROC) plot. | Page 11-12/Line 261-290 | 8-9               |
| Synthesis of results                       | 21      | Describe test accuracy, including variability; if meta-analysis was done, include results and confidence intervals.                                                                                         | Page 11-12/Line 261-290 | 8-9               |
| Additional analysis                        | 23      | Give results of additional analyses, if done (e.g., sensitivity or subgroup analyses, meta-regression; analysis of index test: failure rates, proportion of inconclusive results, adverse events). | Page 11-12/Line 261-290 | 8-9               |
| DISCUSSION                                 |         |                                                                                                                                                                                                             |                 |                   |
| Summary of evidence                        | 24      | Summarize the main findings including the strength of evidence.                                                                                                                                          | Page 12-13/Line 292-311 | Discussion and conclusions/Paragraph 1 |
| Limitations                                | 25      | Discuss limitations from included studies (e.g. risk of bias and concerns regarding applicability) and from the review process (e.g. incomplete retrieval of identified research).                           | Page 16-17/Line 403-408 | Discussion and conclusions/Paragraph 9 |
Table 2 PRISMA-DTA for Abstracts Checklist

| Section/topic | # | PRISMA-DTA Checklist Item                                                                 | Reported on Page Number/Line Number | Reported on Section/Paragraph |
|---------------|---|------------------------------------------------------------------------------------------|------------------------------------|------------------------------|
| TITLE and PURPOSE |   |                                                                                          |                                    |                              |
| Title         | 1 | Identify the report as a systematic review (+/- meta-analysis) of diagnostic test accuracy (DTA) studies. | Page 1/Line 2-3                    | Title/Paragraph 1             |
| Objectives    | 2 | Indicate the research question, including components such as participants, index test, and target conditions. | Page 2/Line 37-41                  | Abstract/Paragraph 1         |
| METHODS       |   |                                                                                          |                                    |                              |
| Eligibility criteria | 3 | Include study characteristics used as criteria for eligibility.                          | Page 2/Line 44-48                  | Abstract/Paragraph 2         |
| Information sources | 4 | List the key databases searched and the search dates.                                    | Page 2/Line 43-44                  | Abstract/Paragraph 2         |
| Risk of bias & applicability | 5 | Indicate the methods of assessing risk of bias and applicability.                       | Page 2/Line 48-49                  | Abstract/Paragraph 2         |
| Synthesis of results | A1 | Indicate the methods for the data synthesis.                                             | Page 2/Line 50                     | Abstract/Paragraph 2         |
| RESULTS       |   |                                                                                          |                                    |                              |
| Included studies | 6 | Indicate the number and type of included studies and the participants and relevant characteristics of the studies (including the reference standard). | Page 3/Line 52                     | Abstract/Paragraph 3         |
| Synthesis of results | 7 | Include the results for the analysis of diagnostic accuracy, preferably indicating the number of studies and participants. Describe test accuracy including variability; if meta-analysis was done, include summary results and confidence intervals. | Page 3/Line 52-57                  | Abstract/Paragraph 3         |
