Supplementary Figure 1. Matched case analysis. Cumulative incidences of (A) non-relapse mortality and (B) relapse by conditioning protocol are represented. Kaplan–Meier curves represent (C) leukemia-free survival and (D) overall survival by conditioning protocol. NRM, non-relapse mortality; RI, relapse incidence; LFS, leukemia-free survival and OS, overall survival; FluMel140, Fludarabine/Melphalan with a total dose 140 mg/m²; FluTreo42, Fludarabine/Treosulfan with a total dose of 42 g/m².
