### S4 Table. Causative Agents of Acute Drug-Induced Liver Injury among Subjects from the Acute Liver Failure Registry

| Category                          | Count |
|-----------------------------------|-------|
| Herbals & Supplements             | 2     |
| Isoniazid [INH]                   | 3     |
| Cerivastatin                      | 2     |
| Piperacillin-tazobactam           | 2     |
| Interferon-beta                   | 1     |
| Isoflurane                        | 1     |
| INH+rifampicin                    | 1     |
| MDMA                              | 1     |
| Pravastatin                       | 1     |
| Propylthiouracil                  | 1     |
| Quetiapine                        | 1     |
| Trimethoprim-sulfamethoxazole     | 3     |
| Nitrofurantoin                    | 3     |
| 6-mercaptopurine                  | 1     |
| Amoxicillin-clavulanate           | 1     |
| Anabolic steroid                  | 1     |
| Atorvastatin                      | 1     |
| Bromfenac                         | 1     |
| Carbamazepine                     | 1     |
| Ciprofloxacin                     | 1     |
| Didanosine                        | 1     |
| Disulfiram                        | 1     |
| Disulfiram                        | 1     |
| Doxycycline                       | 1     |
| Fluconazole                       | 1     |
| Gemtuzumab                        | 1     |

Abbreviations: MDMA, 3,4-methylenedioxy-methamphetamine [aka Ecstasy or Molly]
