Comparison of GnRH antagonist versus GnRH agonist protocol in poor ovarian responders undergoing IVF

Danhua Pu, Jie Wu, and Jiayin Liu

On page 2748, the discussion regarding clinical pregnancy rate was also incorrect – and should read:

“Additionally, although GnRH antagonists showed a trend towards higher clinical pregnancy rates in IVF patients with poor response, the current analysis did not reach statistical significance – possibly due to limited amount of available data. Many RCTs have shown similar results (Martínez et al., 2003; Cheung et al., 2005; Marci et al., 2005; Schmidt et al., 2005; De Placido et al., 2006; Tian et al., 2008; Wang et al., 2008; Liu et al., 2009). These results are encouraging for the design of further prospective randomized trials with larger sample sizes aimed at evaluating the effect of such protocols on pregnancy rates in patients with poor ovarian response.

The authors would like to apologize for these errors.
