Reporting Summary

Nature Research wishes to improve the reproducibility of the work that we publish. This form provides structure for consistency and transparency in reporting. For further information on Nature Research policies, see our Editorial Policies and the Editorial Policy Checklist.

Statistics

For all statistical analyses, confirm that the following items are present in the figure legend, table legend, main text, or Methods section.

- n/a  Confirmed

✓ The exact sample size (n) for each experimental group/condition, given as a discrete number and unit of measurement

✓ A statement on whether measurements were taken from distinct samples or whether the same sample was measured repeatedly

✓ The statistical test(s) used AND whether they are one- or two-sided

Only common tests should be described solely by name; describe more complex techniques in the Methods section.

✓ A description of all covariates tested

✓ A description of any assumptions or corrections, such as tests of normality and adjustment for multiple comparisons

✓ A full description of the statistical parameters including central tendency (e.g. means) or other basic estimates (e.g. regression coefficient) AND variation (e.g. standard deviation) or associated estimates of uncertainty (e.g. confidence intervals)

✓ For null hypothesis testing, the test statistic (e.g. F, t, r) with confidence intervals, effect sizes, degrees of freedom and P value noted

Give P values as exact values whenever suitable.

✓ For Bayesian analysis, information on the choice of priors and Markov chain Monte Carlo settings

✓ For hierarchical and complex designs, identification of the appropriate level for tests and full reporting of outcomes

✓ Estimates of effect sizes (e.g. Cohen’s d, Pearson’s r), indicating how they were calculated

Our web collection on statistics for biologists contains articles on many of the points above.

Software and code

Policy information about availability of computer code

Data collection

Bibliometric details of palaeontological publications on Myanmar were downloaded from the Web of Science. The publications for which affiliations data were missing were manually obtained from the publisher’s webpage or from archived version of the manuscript repositioned on servers such as ResearchGate or Academia.edu.

Data analysis

All data were analysed using R

For manuscripts utilizing custom algorithms or software that are central to the research but not yet described in published literature, software must be made available to editors and reviewers. We strongly encourage code deposition in a community repository (e.g. Git-Hub). See the Nature Research guidelines for submitting code & software for further information.

Data

Policy information about availability of data

All manuscripts must include a data availability statement. This statement should provide the following information, where applicable:

- Accession codes, unique identifiers, or web links for publicly available datasets
- A list of figures that have associated raw data
- A description of any restrictions on data availability

All relevant data and code supporting our analyses are available on Open Science Framework through: https://doi.org/10.17605/OSF.IO/P38X5
Field-specific reporting

Please select the one below that is the best fit for your research. If you are not sure, read the appropriate sections before making your selection.

☐ Life sciences  ☐ Behavioural & social sciences  ☒ Ecological, evolutionary & environmental sciences

For a reference copy of the document with all sections, see nature.com/documents/nr-reporting-summary-flat.pdf

Ecological, evolutionary & environmental sciences study design

All studies must disclose on these points even when the disclosure is negative.

Study description: We use bibliometric and affiliation data from the Web of Science to investigate temporal and geographic trends in Myanmar amber research over the last three decades [1990–2021] and explore how research output is related to national and international legal, commercial, and political developments.

Research sample: Bibliometric details of palaeontological publications on Myanmar were downloaded from the Web of Science. The publications for which affiliations data were missing were manually obtained from the publisher’s webpage or from archived version of the manuscript repositored on servers such as ResearchGate or Academia.edu.

Sampling strategy: N/A

Data collection: Data were downloaded from the Web of Science and additional data obtained from publisher’s webpages or from archived version of the manuscript repositored on servers such as ResearchGate or Academia.edu.

Timing and spatial scale: 1990-2022

Data exclusions: N/A

Reproducibility: All relevant data and code supporting our analyses are available on Open Science Framework through: https://doi.org/10.17605/OSF.IO/PZ8XS

Randomization: N/A

Blinding: N/A

Did the study involve field work? ☐ Yes  ☒ No

Reporting for specific materials, systems and methods

We require information from authors about some types of materials, experimental systems and methods used in many studies. Here, indicate whether each material, system or method listed is relevant to your study. If you are not sure if a list item applies to your research, read the appropriate section before selecting a response.

Materials & experimental systems

| n/a | Involved in the study |
|-----|-----------------------|
| ☒  | Antibodies            |
| ☒  | Eukaryotic cell lines |
| ☒  | Palaeontology and archaeology |
| ☒  | Animals and other organisms |
| ☒  | Human research participants |
| ☒  | Clinical data         |
| ☒  | Dual use research of concern |

Methods

| n/a | Involved in the study |
|-----|-----------------------|
| ☒  | ChIP-seq              |
| ☒  | Flow cytometry        |
| ☒  | MRI-based neuroimaging |
