To provide more detailed comparisons of the effective and GENIE+νT approaches, in Figs. 1 and 2 we show the calculated distributions of reconstructed energy as functions of true energy.

FIG. 1: (color online). Dependence of the reconstructed energy distributions on true energy obtained for νμ (right) and ¯νμ (left) within the effective approach.

FIG. 2: (color online). Same as Fig. 1 but calculated within the GENIE+νT approach.
