Abstract- In spite of the fact that research on the Toyota Production System in Indian industry in swell economies is slowly progressing, its implementation has been emphasized by various researchers and practitioners. Micro, Small and Medium Enterprises are the most important economical unit for the developing country or it is called economic backbone of any country. In comparison with large organization these MSMEs provide more jobs, added value and contribute to GDP of any country. Research on this scope is very limited, particularly when compared to the massive amount of enthusiastic studies contributed to successful implementation of TPS in the developing country. To anchor the narrow body of knowledge on this researched scope, this paper presents the current decreases of implementation of TPS in terms of motive, barriers, challenges, success factor and application. To address these issues, a methodological approach was used in two step. First, a comprehensive reviews of state of the arts literature on the issues was performed followed by an analytic approach using a survey of 120 companies in India basically in Northern part of India to complete the research. On validation of the analysis, the results evident that most of the TPS companies agreed that the reasons of TPS implementation are to increase efficiency, to clean up and organized the workplace, to increase customer satisfaction and increase utilization of space and resources. Non-TPS companies believe that issues related to knowledge and awareness/skills are the main reasons for not understanding the TPS implementation. The TPS companies believes that the barriers are the more about employee-related issues and managerial related issues, which includes, lack of labor resources, lack of knowledge and skill to know-how to implement and employee resistance to change, top management always concern about in investment and middle management have dame issues, there were lack of knowledge in managerial level also. TPS company also face challenges in the form of technical knowledge, training and financial resources during the implementation phase of TPS implementation. In addition, only six applications were found- 5S, Kanban, JIT, employee training and quality control found in Northern part of Indian Industries. These finding represent a critical view of the current decrease of TPS implementation in Indian industry and other spring economies.

Keywords- Toyota production system, Toyota production system tools, success factors, barriers and application

I. INTRODUCTION

After the publication of a book “The Machine that Change the World” Womack et al., (1990), Toyota Production System underwent a significant and remarkably evaluation over the years, subsequently being consistently accepted as a highly beneficial practices Bhim and Singh Sangwan, (2014). Over the course of time, a numerous number of researcher have explained the various ranges of tools for Toyota production system (TPS), since it has successfully proved in a large variety of industries with many successful cases recorded in study Pearce et al., (2018).

As increasing number of literature studies have found that TPS has significantly contributed to the success of companies in developing countries (e.g. Japan, UK, US, Germany and Italy). Till now this philosophy has been only applied in developing countries and there is little effort taken to investigate TPS implementation in developing country Nawanir et al., (2013). On other hand, the implementation of TPS in Indian industry is not promising. An evidence show there is little respondents from Indian company has implemented TPS practices. Till now, TPS is a new manufacturing methodology especially for Indian industries. This condition bring out a fundamental question: “what are the barriers for the TPS manufacturing adaptation?”
Unfortunately, a majority of micro, small and medium enterprises (MSMEs) have rejected the idea of adopting TPS Bhamu and Singh Sangwan, (2014). Irregardless prior evidence of the benefits of TPS implementation, there are several barriers to it as well including perception, lack of tangible benefits and issues with shop floor employee Melton, (2005). This may largely be due to:

1. The fear of investment cost and the successive benefits of lean Bhamu and Singh Sangwan, (2014)
2. There are scarcity of job security among employees and the risk of losing their jobs if it is non-value added Khaba and Bhar, (2018)
3. There is lack of a supportive organizational culture to overcome the fear of failure, change and uphold the greater responsibility Coetzee et al., (2018)
4. There is lack of governmental or financial support, which is a significant factor of success of TPS implementation Thanki and Thakkar, (2018)
5. Lack of knowledge/skill and training Pearce et al., (2018)

On the behalf of these two companies (TPS and non-TPS companies), a very important questions rise “to what are the motive of TPS implementation adaptation?” The study by Pearce et al., (2018) stresses the importance of knowledge management in the early phase of TPS implementation, which is according to Chay et al. (2015) who published that the lack of technical knowledge among the shop floor employees present the biggest challenges in TPS implementation. Similarly Achanga et al., (2006) also identified the lack of skills among the shop floor employees as an obstacles in TPS implementation, believes that,

1. Adaptation of new environment is dependent on the management considering that TPS is a sustainable philosophy.
2. Technical knowledge and managerial commitment are crucial in ensuring its full implementation

It was also observed that managerial resistance to change, TPS is stunt and TPS is unsustainable Pearce et al., (2018). Shah and Ward (2007) claimed that TPS is multifunctional concept, i.e. it is not scarcely dependent on single principle. This claim was further supported by Achanga et al., (2006), who concluded that the implementation of TPS must not be carried out as separate practices.

To achieve these considerations, this paper is arranged as follows; Section 2 provide literature review; Section 3 addresses the research methodology; Section 4 present the comprehensive results and discussion and in last section conclusion, limitation and recommendation for future research.

II. LITERATURE REVIEW

To deals with the studies purpose, this take a look at reviewed the literature that investigates the TPS implementation in phrases of motives, barriers, challenges, success factors and applications. This review gives an understanding of the TPS problems through the scenarios performed in developing countries (e.g. the Indian scenarios). In this regards, firstly, this segment affords a background of TPS in context. Following, it present an inclusive issue that drive Indian manufacturing sectors put in force in order to research the reasons and barriers that keep companies form working towards TPS.

III. BACKGROUND OF TOYOTA PRODUCTION SYSTEM

Incorporative sector and have various definitions among researchers who have diverse perspective of ideas and different point of views, plans, thought and suggestions Bhamu and Singh Sangwan, (2014)). In generals TPS means manufacturing without waste. Various researchers have pointed TPS is an approach to eliminate waste. On other hand, Shah and Ward (2007) defined TPS as a methods to deliver the extreme value to customers by removing waste through process and human design elements.

TPS can also be defined on the basis of benefits or intension of implementation Melton, (2005). Hallgren et al., (2009) defined TPS as an approach of increasing efficiency of operations, identifying both value and waste, developing knowledge and creating a working culture of continuous improvement to promote sustainability in the process of operation and business management. Other researchers defined TPS based on philosophy of TPS tools. TPS is defined as a people-oriented production system Chay et al., (2015). Besides that, TPS philosophy is not only a multi-dimensional approach consisting of production with minimum amount of waste (JIT), continuous and unremitting flow (cellular manufacturing), well organized equipment (TPM), well-established quality system (TQM) and well-trained and empowered work force (HRM) that positively impacts operation/competitive performance Al-Ashraf; Singh and Singh, (2012; 2009). Conjunction, Samuel et al., (2015) identified that many researchers do not agree with any one solid definition for TPS. Their conflict have eventually led to the involvement of TPS definition. Even though it lacks in certain areas, this deficiency has provided an opportunities for researchers to explore for a better TPS ideology.

However, the benefits of lean have been published for over three decades Pearce et al., (2018). Powell et al. (2013) proposed that TPS practices have a positive relationship with the four dimens of operational performance, i.e. quality, lead time performance, flexibility performance and cost performance. Chandrasekaran (2008), figure out that TPS is an effective method in improving operational performance by improvement in its quality, minimization of inventory, delivery, productivity and minimization of waste. Toyota production system is also considered as a powerful technique in improving business performance by improving
profitability, sales and customer’s satisfaction Rothere and Shook, (2003).

IV. MICRO, SMALL AND MEDIUM ENTERPRISES

Micro, Small and Medium Enterprise (MSMEs) are well organized around the world, both nationally and internationally; as key and significant contributors to economic development, as job creation and health and well-being of economies. Khaba and Bhar, (2018). In order to facilitate the implementation of LM in MSMEs, a proper understanding of their characteristic will help us in our research.

The Ministry of Industry and Information Technology (MIIT) in India revised the definition of MSMEs which was defined by Small and Medium Enterprise (SMED) Act 2006, the new definition of MSMEs is defined in table 1. It was defined on three categories, (1) on the basic of investment in manufacturing sector (2) on the basic of investment in service sector and (3) on the basic of turnover of that industries.

Table-1. Definition Criteria of MSMEs in India [Times of India]

| Categories     | Manufacturing       | Service           | Turnover          |
|----------------|---------------------|-------------------|-------------------|
| Micro Enterprises | Investment up to Rs. 25 lakhs | Investment up to Rs. 10 lakhs | Up to Rs 5 crore  |
| Small Enterprises | Investment above Rs. 25 lakh and up to Rs. 5 crore | Investment above Rs. 10 lakh and to Rs. 2 crore | Over Rs 5 crore to Rs 75 crore |
| Medium Enterprises | Investment above Rs 5 crore and up to Rs 10 crore | Investment above Rs 2 crore and up to Rs 5 crore | Over Rs 75 crore to Rs 150 crore |

V. THE IMPLEMENTATION OF TPS IN MSMES

MSMEs faced tough competition from global markets every day and higher customer demand. The scope with these changing condition many large companies are implementing TPS. TPS offers a holistic strategy to eliminate waste, achieve good quality products and process quality and reduce lead times. While large companies are able to provide the necessary resources and expert who know how to configure and implement the TPS, while MSMEs have lack of these essential resources and financial problem for the organization and they have technological and labor-related challenges.

According to a study by Ramakrishnan et al. (2019) 42% of MSMEs are those who have tried to implement the TPS methodology in India and only 54% of those companies have set TPS methodology in application targets for all services. (The samples includes 48 MSMEs in the automotive, manufacturing and service sector in India).

VI. METHODOLOGY

The study has chosen in year 1990 as the starting year as the implementation of TPS in SMEs was conducted for the first time in this articles: JIT implementation in small manufacturing firms by Golhar, Stamm, and Smith (1990). In the initial search, there were a list of over 1020 research papers associated with the topic of Lean, collected from four major management science publishers, namely, Emerald online, Science Direct, Springer Link and Taylor & Francis. This list was then narrowed by using different keywords that were related only the main research topic.

VII. BARRIERS IN TPS IMPLEMENTATION

A lot of barriers to TPS implementation have been discussed in the literature; the respondents had been limited to include only employees of companies that are practicing TPS. Panwar et al., (2015) embossing that one item under reasons for not implementing TPS was deleted to increase the value of alpha ($\alpha$) because it is obvious form the customers given that most of the respondent are familiar with Toyota production system. Khaba and Bhar (2018) carried out a study on the cognition of TPS barriers among TPS and non-TPS companies. There was a significant difference in the cognition of four TPS barriers between non-TPS and TPS companies like wise, lack of TPS understanding, resistance to change, financial compelling and lack of TPS trainer and consultant (Khaba and Bhar, 2018). There are some more barriers identified by Abolhassani et al., (2016), lack of technical skills about TPS methods and lack of understanding about its benefits are also restricts in the implementation of TPS for both non-TPS and TPS companies. On the basis of expert’s opinion, there is still lack of awareness and TPS implementation in Indian industries due to the fact that TPS is still new for Indian industrialist Shah and Ward, (2003).

VIII. MOTIVE FOR ADOPTING TPS IN INDIAN INDUSTRIES

The growing need of customer and competitive market environment as well as social and economic. The main motive behind TPS implementation is the self desire stemming from the organization’s objective Simmons and Walden, (2010). From the extensive review on literature, most TPS practitioners agreed that the reasons for TPS
implementation are to improve customer satisfaction Panwar et al., (2015); Pirraglia et al., (2009), to minimize the time it takes to deliver products to the markets or customer and to improve quality Williams, (2015); Coetzee et al., (2018). Moreover, there are some contradictions found on some factors. Panwar et al., (2019) who investigated the status of TPS manufacturing in Indian processing industries and highlighted that cost reduction is a significant factor for adopting TPS methodology. Yet Vilkas et al., (2015) found that there is no significant reason to increase utilization of space and supply chain efficiency.

Table-1 Extant literature on the TPS issues- motive, barriers, challenges, success factor and application.

| Suggest | Finding/Concept | References |
|----------|-----------------|------------|
| Motives  | The significant motives are to increase customer satisfaction, waste elimination, decrease production cost and enhance productivity, to improve quality and increase demand management efficiency. | Panwar et al. (2015) |
| Motives  | To improve efficiency and improve capacity related to problem-solving and housekeeping. | Vilkas et al. (2015) |
| Motives  | For assist in the achievement of strategic objective to enhance efficiency and maintain marketplace competitiveness. | Pirraglia et al. (2009) |
| Motives  | Indian industries are working towards enhancing the quality of their products, improving customer satisfaction and trying to minimize the lead time. | Achanga et al. (2006) |
| Motives  | Good project quality is ranked highest while reducing construction cost is ranked lowest. | Shah and Ward (2003) |
| Barriers | Significant reason to not option for implementing lean are large batch production is necessary for capacity utilization and lack of education and expertise on lean. Lack of time and lack of financial resources are not the reason for not adopting lean. The “unfamiliar with lean” was detected because most respondents answers that they were with lean manufacturing. | Panwar et al. (2015) |
| Barriers | Insufficient training on lean, insufficient employee recognition applications on lean, underneath-usage of method development statistical tools and ambiguity approximately appropriate lean equipment to be used are the limitations. Employee | Thanki and Thakkar (2014) |

| Barriers | Lack of knowledge about lean philosophy, unskilled human resources and insufficient financial resources are the barriers. Moreover, half of the respondent believed that culture and human attitude issues, lack of government support and resistance to change is the barriers. | Bajjou and Chafi (2018) |
| Barriers | The knowledge and management areas indicated the highest driving power and lower dependent such as inadequate management time as well as deficiencies in supervisory and senior management skills. | Coetzee et al. (2018) |
| Barriers | Employee example: lack of well-trained and experienced staff, knowledge about existing specialist, management commitment, coaching, communication, support, employee development and job security. There is greater focus on lean tools at the expense of the human side of lean management. | Coetzee et al. (2018) |
| Barriers | Cultural difference at workplace are the main for both lean and non-lean organization. There are significant differences in the perception between lean and non-lean organization on the lack of lean understanding, resistance to change, financial capability and lack of consultant and trainers. | Khaba and Bhar (2018) |
| Barriers | 12 vital barriers were identified. Six variables are from high rejection rate (inadequate coaching program, insufficient regular maintenance, inferior quality materials provided by supplier, lowly examination of vendors, deteriorating machine, problematic supervisor-worker communication); two were from the worker absence (un-maintained worker, leader relationship, work boredom); and four were from frequent breakdown factors (overworked machines, work negligence, non-replacement of impaired machine elements and disrespect of warning | Kezia and Sai (2017) |
| Factors                                                                 | Panwar et al. (2015)                                                                                      |
|----------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|
| In order to successful implementation of lean manufacturing concept  | Company need to view training costs as investment, availability of adequate resources for an organization |

| vision, strategy share your vision throughout.                       | improvement. A good manager and employees never repeat the old procedure in the organization.            |
|----------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|
| Most MSMEs utilize individuals with low aptitude levels and they don’t| Simmons and Walden (2010)                                                                                   |
| encourage the belief system of ability improvement. Low level        | Management should always be concern to improve the efficiency of the organization. Management and       |
| representative abilities would not harness the desire for innovation  | employees make his mind in the way to development or improvement and always try to identify the area of   |
| advancement.                                                        | improvement. A good manager and employees never repeat the old procedure in the organization.            |
|----------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|
| Budgetary limits is a critical factor in the assurance of any        | Abdullah et al. (2008)                                                                                     |
| fruitful projects. This is because of the way that finance covers    | The big challenges are to assist small batch production, lack of training and to arrange TPS             |
| the roads through which other helpful arrangements like consultancy  | implementation experts.                                                                                   |
| and preparing can be made. Training of people to utilize the        |                                                                                                          |
| techniques also requires financial resources.                        |                                                                                                          |
|                                                                      |                                                                                                          |
| Communication in any organization is important, but particularly in  | Osman et al. (2019)                                                                                       |
| a manufacturing environment where multiple shift are employed. When  | The big challenges are ten identified were lack of material requirements planning system, poor core      |
| communication does not occur, products and quality may suffer and    | information, a lack of core material, poor spare parts information and insufficient quality management    |
| displeasure between workers may occur. Lean manufacturing require    | practices, huge inventory and lack of supply chain management.                                            |
| clear communication, not only between shifts but also between all    |                                                                                                          |
| value streams. Lean manufacturing must have                         |                                                                                                          |
| communication pathway that are effective and broad.                 |                                                                                                          |
| Challenges                                                                 | The formation of TPS team need the involvement of the company employees as well as academics or consultants that represent the expert on TPS. | Wahab and Sulaiman (2017) |
|---------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| Challenges                                                                 | There are four challenges identified were to define what is waste, what is value, what is constraints and how to support design process in a TPS oriented way. | York and Chen (2018) |
| Applications                                                               | The highest TPS tools utilized were 5S, visual control, work standardization, Kanban, Poka-Yoke and value stream mapping were used in Indian industries. | Panwar et al. (2015) |
| Applications                                                               | The most successive used of TPS practices are: employee training on TPS principle and practices, integration of quality control into work process, work standardization and 5S. | Vilkas et al. (2015) |
| Applications                                                               | Industries 4.0 and TPS can coincide and complement each other, TPS tools used to assist industry 4.0 and JIT, Kanban, VSM, TPM, SMED, poka-yoke and 5S. | Singh and Sharma (2010) |
| Applications                                                               | Standard operation, continuous flow, Kanban, teamwork, employee training, design of continuous flow and support partnership were suggested for optimization cycle time and lead time. | Coetzee et al. (2018) |

**IX. CHALLENGES WHILE IMPLEMENTING TPS**

This study reviewed the prevailing challenges of TPS implementation, so that the key observation and perception could be summarized to guide Indian industries towards TPS transformation. Rawabdeh (2005) proposed a new TPS framework which was established form the drivers and barriers to TPS implementation. Limitations need to be identified earlier so that industries can take consciousness of their ability, be better equipped for the implementation of TPS and be unaltering consistent process-wise Singh and Singh, (2009). Moreover, TPS deployment requires changes in structure, system, process and employee behavior in accordance to the transformation plan Pattanaik and Sharma, (2009).

**X. SUCCESS FACTORS OF TPS IMPLEMENTATION**

Success factors are those few thing that the majority go well to make sure success for a manager or an organization and thus, they represent those managerial or enterprises areas that must be give special and continual attention to bring high performance by Boynton and Zmud, (1984). Alternatively, it can be said that the SF are the select few overarching requirements that must be present for an organization to be able to attain its vision and to be guided toward its vision. The success depends on customers program, stakeholders, people and process. it was found that the most important success factors to have successfully implemented TPS manufacturing are employees involvement and culture change Petroni, (2002). Top management commitment is one of the most important factor for implementation of TPS manufacturing Floyd and McManus, (2002). Effective and transparent communication one of the most important drives of TPS implementation in manufacturing Panwar and Rathore, (2015). Pearce et al. (2018) conducted case studies on two first industries which were first time implementation of TPS manufacturing. The authors highlighted that the key issues were handling staff and their resistance to change. Melton (2005), pointed that the financial capabilities is also a crucial factor of TPS implementation in Indian industries.

**XI. APPLICATIONS OF TPS IMPLEMENTATION**

There are almost 100 tools for TPS practices and with time, there are going to be more and extensive collections of TPS practices as suggested by various researchers Antony et al., (2016). The selection of TPS practices should be made wisely to guarantee a successful implementation. Chay et al. (2015) identified failure to engage with shop floor employee, poor supervision skills and lack of knowledge Urban and Naidoo, (2012) as the obstacles in lean transformation. According to Anvari et al. (2011), the selection of TPS practices should be made based on the nature of the process or works. It is important that a manufacturing has enough knowledge on lean practices, so that they understand the working of TPS implementation.

Table-2. The summery of published studies on the TPS issues.

| Issues | Motive/Applications | References/Sources |
|--------|---------------------|--------------------|
| 1. Motive of adopting TPS practices | To increase customers satisfaction | Panwar et al. (2015) |
| | Satisfaction of customers | Vilkas et al. (2015) |
| | To improve customers satisfaction | Pirraglia et al. (2009) |
| | To eliminate waste | Vilkas et al. (2015) |
| | Eliminations of wastes | Panwar et al. (2015) |
| | To minimize the production cost | Panwar et al. (2015) |
| | Profit | Vilkas et al. (2015) |
| | Minimizing the planning and design cost | Bajjou and Chafi (2018) |
| | Cost reduction | Pirraglia et al. (2009) |
| | Lower costs and faster turnover | Achanga et al. (2006) |
| | To improve quality | Panwar et al. (2015) |
| | Quality products | Vilkas et al. (2015) |
| | Improvement in service quality | Pirraglia et al. (2009) |
| Improving the quality | Pirraglia et al. (2009) |
|-----------------------|-----------------------|
| New product development | Vilkas et al. (2015) |
| To solve problem | Vilkas et al. (2015) |
| Identification and solving the problems | Vilkas et al. (2015) |
| To increase efficiency | Coetzee et al. (2018) |
| To improve efficiency | Panwar et al. (2015) |
| To increase supply chain efficiency | Panwar et al. (2015) |
| Increase management efficiency | Singh and Singh (2009) |

2. Barriers in TPS implementation

| Middle and Top management resistance to change | Pirraglia et al. (2009), Upadhye (2010), Soon (2016) |
| Deficiency in senior management interest and support | Panwar et al. (2015) |
| Lack of management commitment | Panwar et al. (2015) |
| Management resistance to change | Shah and Ward (2007) |
| Lack of commitment from top management | Kezia and Sai (2017) |
| Lack of senior management commitment | Shah and Ward (2003) |
| Employee resistance to change | Bajjou and Chafi (2018), Khaba and Bhar (2018), Pandiaraj (2008) |
| Employee resistance | Pirraglia et al. (2009) |
| Unwillingness to learn and see | Vilkas et al. (2015) |
| Employee attitude | Pattanaik and Sharma (2009) |
| Lack of empowerment of employee | Rajeev (2008) |
| Attitude of workman | Melton (2005) |
| Lack of expertise on TPS | Panwar et al. (2015) |
| Lack of understanding about TPS | Vilkas et al. (2015) |
| Lack of methodology | Upadhye (2010) |
| Lack of TPS consultant and trainers | Singh and Singh (2009) |
| Inadequate knowledge and TPS expertise | Shah and Ward (2003) |
| TPS is difficult to implement | Coetzee et al. (2018) |
| TPS is difficult to implement | Vilkas et al. (2015) |
| Not easy to implement | Panwar et al. (2015) |

3. Challenges while implementing TPS

| Lack of employee commitment | Bajjou and Chafi (2018) |

| Attitude of workman | Sahoo and Yadav (2018) |
| Change in employee behavior | Pearce et al. (2018) |
| Worker resistance to change | Achanga et al. (2006) |
| Employee relations | Pirraglia and Saloni (2009) |
| Lack of senior management interest and support | Antony et al. (2012) |
| Lack of management commitment | Thaki and Thakkar (2014) |
| Lack of TPS awareness program for employee | Sahoo and Yadav (2018) |
| Lack of senior management commitment | Pearce at al. (2018) |
| Lack of management understanding | Achanga et al. (2006) |
| Poor communication and leadership | Bajjou and Chafi (2018) |
| Lack of technical knowledge | Osman and Rahim (2019) |
| Uncertainty regarding the appropriate tools and technique | Panwar et al. (2015) |
| Inadequate knowledge and TPS expertise | Thaki and Thakkar (2014) |
| Lack of skills, knowledge and expertise | Sahoo and Yadav (2018) |
| Lack of understanding of TPS | Pirraglia et al. (2009) |
| Inadequate training | Panwar et al. (2015) |
| Lack of TPS training | Shah and Ward (2007) |
| Poor training | Achanga et al. (2006) |
| Organizational learning | Kezia and Sai (2017) |
| Not easy to implement | Coetzee et al. (2018) |
| Supplier unreliability | Pirraglia et al. (2015) |
| Improper information exchange | Melton (2005) |
| Difficulty of applying TPS technique | Simmons (2010) |
| High process variability | Coetzee et al. (2018) |

4. Application of TPS implementation

| 5S- Five (5S) Method | Bhamu and Sangwan (2014), Melton (20005), Pirraglia et al. (2009), Shah and Ward (2007) |
| 5S (Seiri, Seiton, Seiso, Seiketsu and Shitsuke) | Pirraglia et al. (2009) |
| Workplace organization | Thaki and Thakkar (2018) |
| Workplace management | Vilkas et al. (2015) |
XII. CONCLUSION

The research is among the very limited number of studies, which have investigated the current scenario of implementing the TPS manufacturing in the Indian MSMEs in terms of motives, barriers, challenges, success factors and applications. The following is a summary of the conclusions, which can contribute to support the distressed of knowledge on the under-researched scope.

- This study found that generally the motives for adopting TPS practices are to increase efficiency, utilization of space and maintained organized workplace. In this study, found that most of the TPS tools used in Indian industries are 5S tools which is a basis TPS practices used to increase utilization of space and resources by cleaning up and organizing the workplace. The finding show that the companies believe in the benefits of TPS practices and are willing to change for the sustainability of business.

- Demonstration form the study suggested that implementation of TPS in Indian industries is not an easy task, as it is heavy burden by knowledge and resource related barriers. The most obvious finding to emerge from this study is that both TPS and non-TPS companies believed that the knowledge is the prominent issue. There are lack of implementation knowledge and deficiency of expertise on TPS approach.

- This study also identified the barriers which comparable for both TPS and non-TPS companies, our finding show that the companies do not implement TPS because they are not be able to understand the profit gained from practices of TPS. During our study most of the company believe that employee resistance to change was a big problem for that company.

- During this study identified that the strong leader and management play a vital role in implementing the TPS methodology in Indian industries. The contribution of effective and transparent communication is very high which an important factor of TPS implementation was also.

Despite its exploratory nature, this study offers some insight into TPS implementation consciousness while identifying knowledge areas of strength and deficiencies. The results of this study will help government and private industries in India to make some more mature and careful decision regarding the TPS issues and success factors. More information on TPS implementation from Indian industries would help us to established TPS implementation framework towards the successful implementation of TPS in Indian industries.

This study, have some limitations, which suggest some directions for future research. The study was limited number of industries/companies in Indian context. Only MSMEs are considered in this study including, automobile, manufacturing, services, aviation and food/beverage industries. So for future study, the limitation of industries can be increase for the better result.
