Figure S2

A

![Graph showing ZIP1 and ZIP8 expression levels with NTC and siRNA treatments. The x-axis represents the siRNA, with ZIP1 and ZIP8, and the y-axis represents the ZIPS/GAPDH ratio. The graph includes error bars indicating variability.]

B

![Images showing fluorescence microscopy of cells treated with different conditions. The images are labeled NTC, ZIP1, and ZIP8 under Mock and DENV conditions. The images show cell structures with green and blue staining.]
