Supplementary Figure S2. Symbiodiniaceae genus-specific primer set standard curves. Two standards were generated, (A) cell number based standard (Cell-STD): constructed as 1, 10, 100, 500, 1000, 2000 and 4000 cell per qPCR reaction. (B) ITS copy number based standard (ITS-STD) constructed from a purified ITS gene as serial of 10-fold dilutions $10^2$ to $10^7$ copy number per qPCR reaction. Cq values plotted against (A) Log (Cell number) and (B) Log (ITS copy number). Standard deviation of two plates replicate denoted as error bars.
