RESEARCH INTERESTS

I am an experimental condensed matter physicist interested in investigating fundamental problems in quantum materials, as well as in controlling their nonequilibrium properties with light. The goal of my research is to discover novel, emergent physical phenomena and solve long-standing problems in the physics of interacting electron systems. To further these goals, I make use of advanced ultrafast optical methods and of ultrafast scattering probes both in my laboratory and at large-scale facilities (e.g. free electron lasers).
