Figure S1. Repeated administration of FOP to OMM12 mice is safe

A. Experimental design. OMM12 mice (n = 6) were orally administered FOP (10^9 PFU), black triangles) or PBS (white triangles) on the indicated days. B. Mice were weighed daily. Shown is the percentage of weight loss compared to starting weight of OMM12 mice over time. C. The amount of phage in OMM12 mice feces were quantitated daily. Shown are the PFU counts in OMM12 mice that received the indicated doses of FOP. D. Fecal lipocalin-2 was quantitated (ng/g) over time. The horizontal dash line represents the threshold of inflammation (TOI) as defined in (26).
