Abstract

Based on a lexicon of Portuguese MWE, this presentation focuses on an ongoing work that aims at the creation of a typology that describes these expressions taking into account their semantic, syntactic and pragmatic properties. We also plan to annotate each MWE-entry in the mentioned lexicon according to the information obtained from that typology. Our objective is to create a valuable resource, which will allow for the automatic identification of MWE in running text and for a deeper understanding of these expressions in their context.

1 Introduction

As it is widely known, the lexicon does not consist mainly of simple lexical items but appears to be populated with numerous chunks, more or less predictable, though not fixed (Firth, 1955). In fact, the development of computer technologies and corpus-based approaches has enabled the identification of complex patterns of word associations, proving that the speakers use a large number of preconstructed phrases that constitute single choices (Sinclair, 1991:110). Several studies have also shown that great part of a speaker’s lexicon is composed by these word associations (Jackendoff, 1997; Fellbaum, 1998). These multiword expressions (MWE)\(^1\) appear in every kind of spoken and written discourse and, despite the fact that they don’t pose any problems from the speaker’s point of view (we easily recognize that they function as a single unit that may have a specific meaning), natural language processing (NLP) applications, on the other hand, find notorious difficulties when dealing with them (Sag et al., 2000).

Bearing in mind the extreme importance of the study of this linguistic phenomenon for the improvement of NLP systems, this paper will address an ongoing analysis that aims to create a typology for MWE in Portuguese (based on a MWE lexicon previously extracted from a 50 million word written corpus) that will be used to enrich that lexicon with extensive information regarding these expressions. This annotated lexicon will be a resource that will allow for the annotation of these expressions in running text (Hendrickx et al., 2010a).

This presentation will briefly discuss compilation of the lexicon and the methodology adopted for MWE selection and organization (section 2), the typology based on syntactic, semantic and statistical criteria (section 3), the annotation proposal of the lexicon (section 4) and applications of the work (section 5).

2 MWE: Corpus and Lexicon

The work we are going to present used the lexicon of word combinations\(^2\) that was created within the scope of the project COMBINA-PT – Word Combinations in Portuguese Language\(^3\). The corpus used for their extraction was 50 million word writ-

---

\(^1\) The term multiword expression will be used to refer to any sequence of words that act as a single unit, embracing all different types of word combinations (collocations, compound nouns, light verbs, institutionalized phrases, idioms, etc.).

\(^2\) The lexicon is available at Meta-Share repository: http://www.meta-net.eu/meta-share.

\(^3\) https://www.clul.ul.pt/en/research-teams/187-combina-pt-word-combinations-in-portuguese-language
ten corpus extracted from the Reference Corpus of Contemporary Portuguese\(^4\), and has the constitution presented in Table 1 (Mendes et al., 2006):

| CORPUS CONSTITUTION |
|----------------------|
| Newspapers          | 30,000,000 |
| Books               | 10,917,889 |
| Magazines           | 7,500,000  |
| Miscellaneous       | 1,851,828  |
| Leaflets            | 104,889    |
| Supreme court verdicts | 313,962   |
| Parliament sessions | 277,586    |
| TOTAL               | 50,966,154 |

Table 1. Constitution of the corpus

The MWE in the lexicon are organized in order to identify a main lemma (from which the MWE was selected) and a group lemma, which corresponds to the canonical form of the MWE and covers all the variants that occurred in the corpus. Concordances lines for each MWE are also available in KIWIC format. Table 2 illustrates some MWE that were identified when analyzing the lemma fogo ‘fire’.

| Main Lemma | Group Lemma | Concordances |
|------------|-------------|--------------|
| fogo ‘fire’| arma de fogo ‘firearm’ | uma arma de fogo relativamente leve ‘a relatively light firearm’ 800 mil portugueses possuem armas de fogo ‘800 thousand Portuguese have firearms’ |
|           | baptismo de fogo ‘baptism of fire’ | teve o seu baptismo de fogo no assalto ‘he had his baptism of fire in a robbery’ |
|           | fogo cruzado ‘crossfire’ | civis apanhados no fogo cruzado entre o exército ‘civilians were caught in a crossfire between the army’ |
|           | fogo de artifício ‘firework’ | espectáculos de fogo de artifício ‘firework shows’ à 1 hora haverá fogos de artifício ‘there will be fireworks at 1:00 a.m.’ |

Table 2. Example of MWE for the lemma fogo ‘fire’

In all, the lexicon comprises 1.180 main lemmas, 14.153 group lemmas and 48.154 word combinations.

Mendes et al. (2006) describe the criteria used for MWE selection: following the results of previous studies (Evert and Krenn, 2001; Pereira and Mendes, 2002), the authors first selected groups with MI\(^5\) values between 8 and 10, and, throughout manual validation, applied several criteria upon which usually relies the definition of a MWE: a) lexical and syntactic fixedness that can be observed through the possibility of replacing elements, inserting modifiers, changing the syntagmatic structure or gender/number features; b) total or partial loss of compositional meaning, which means that the meaning of the expressions can not be predicted by the meaning of the parts; c) frequency of occurrence, which means that the expressions may be semantically compositional but occur with high frequency, revealing sets of favoured co-occurring forms, which could tell that they may be in their way to a possible fixedness.

### 3 Data Analysis: Towards a Typology

In contrast to languages for which there is a wide range of studies regarding MWE both from a linguistic and a computational point of view, for Portuguese little work has been done so far. Great part of the existing studies had paid more attention to idiomatic expressions and compound nouns in general, relegating the analysis of other types of expressions to the morphosyntactic properties of its elements (Macário Lopes, 1992; Chacoto, 1994; Baptista, 1994; Vilela, 2002; Ranchhod, 2003)\(^6\).

Considering the existence of different types of MWE with different degrees of syntactic and semantic cohesion, our analysis tries to categorize these expressions taking into account their lexical, syntactic, semantic and pragmatic properties. Thus, from a semantic standpoint, three major classes were considered: (i) expressions with compositional meaning (pão de centeio ‘rye bread’); (ii) expressions with partial idiomatic meaning, i.e., at least one of the elements keeps its literal meaning.

\(^4\) CRPC is a monitor corpus of 311 million words, constituted by sampling from several types of written and spoken text and comprising all the national and regional varieties of Portuguese (https://www.clul.ul.pt/en/research-teams/183-reference-corpus-of-contemporary-portuguese-crpc).

\(^5\) Statistical association measure (Church and Hanks, 1990).

\(^6\) Some research has been carried out regarding the identification and annotation of Complex Predicates, usually called in the literature Light Verb Constructions or Support Verb Constructions (Hendrickx et al., 2010b; Duran et al., 2011; Zeller and Padó, 2012).
Expressions with Compositional Meaning

Favoured co-occurring forms – expressions that occurred with high frequency in the corpus, revealing a tendency to co-occur in certain contexts (pão seco ‘dry bread’, desvendar o mistério ‘unravel the mystery’). Expressions with full lexical and syntactic variation.8

Compound nouns – expressions that represent a single concept (noite de núpcias ‘wedding night’, cama de casal ‘double bed’, cavalo alazão9 ‘chestnut horse’, Idade do Ferro ‘Iron Age’). Usually, these expressions are semi-fixed. However, we also observed that some combinations may occur in a small distributional paradigm (cama de solteiro ‘single bed’) that allows for predicative constructions (a cama é de solteiro lit. ‘the bed is single’). Entities are fixed.

Institutionalized expressions – expressions observed with higher frequency than any alternative lexicalization of the same concept (lufada de ar fresco ‘breath of fresh air’, condenar ao fracasso ‘doomed to failure’, abrir um precedente ‘set a precedent’). Apart from inflection, since there are alternative expressions, we also observed lexical variation, such as substitution (rajada de ar fresco ‘rush of fresh air’), insertion of modifiers (condenar este projecto ao fracasso lit. ‘to doom this project to failure’) and change in the syntactic structure (o precedente foi aberto ‘a precedent has been set’, abertura de um precedente lit. ‘the opening of a precedent’).

Light verb constructions – expressions where the noun is used in a normal sense and the verb meaning appears to be bleached (dar um passeio ‘take a walk’). Expressions with lexical and syntactic variation (substitution, insertion of modifiers, change in the syntactic structure).

Proverbs (no poupar é que está o ganho ‘profit is in saving’). Despite our conception of proverbs as frozen expressions, the fact is that speakers’ lexical creativity may result in the production of expressions such as no anunciar/atacar/descontar/esperar/comparar é que está o ganho ‘profit is in announcing/attacking/discounting/waiting/comparing’.

Expressions with Partial Idiomatic Meaning

Expressions with an additional meaning that can not be derived from the meaning of its parts10, (cinturão negro ‘black belt’ + martial arts expert, abrir a boca ‘open the mouth’ + to speak/to yawn, deixar as mãos à cabeça lit. ‘throw the hands in the head’ (throw one’s hands up) + despair). Nominal expressions are semi-fixed while verbal expressions may undergo inflection and lexical variation, such as substitution (levar/lançar as mãos à cabeça lit. ‘put/lay the hands in the head’) and insertion of modifiers (deitou logo as mãos à cabeça lit. ‘put immediately his hands in his head’).

---

7 Since Portuguese is a highly inflectional language, practically all the verbs and nouns that occur in MWE inflect.
8 More examples of variation will be included in Section 4.
9 “Lexikalische Solidaritäten” (Coseriu, 1967).

10 Quasi-phrasemes or quasi-idioms (Mel’cuk, 1998).
Compound nouns: (i) the meaning does not occur in any other combination (sorriso amarelo lit. ‘yellow smile’ → yellow = wry); (ii) the meaning may occur in different combinations (café fresco ‘fresh coffe’, pão fresco ‘fresh bread’ → fresh = recent); (iii) periphrastic nouns (continent negro ‘black continent’ = Africa); (iv) entities (dama de ferro ‘iron lady’). Apart from inflection, some expressions are subject to lexical and syntactic variation, namely insertion of modifiers (sorriso muito amarelo lit. ‘smile very yellow’), alternation between simple elements and elements with suffixes (sorrisinho amarelo lit. ‘little yellow smile’) and alternation between adjectival and prepositional modifiers (silêncio mortal ‘deadly silence’, silêncio de morte ‘silence of death’). Entities are fixed.

Expressions with Total Idiomatic Meaning

- Expressions transposed to another semantic field by metaphoric process (balde de água fria ‘cold shower’, faca de dois gumes ‘double-edge knife’, esticar o pernil ‘kick the bucket’, deitar água na fervura ‘pour oil on troubled waters’, a sangue frio ‘in cold blood’). Adverbial expressions are fixed. Some of the nominal and verbal structures may undergo lexical and syntactic variation, such as substitution (arma/espada/pau de dois gumes ‘double-edge weapon/sword/stick’), insertion of modifiers (deitar mais água na fervura ‘pour more oil on troubled waters’), permutation (estar de mãos e pés atados ‘bound hand and foot’, estar de pés e mãos atados ‘bound foot and hand’ (helpless)) and occurrence both in negative and affirmative sentences (ter olhos na cara lit. ‘have eyes in the face’ (put things in perspective), não ter olhos na cara lit. ‘do not have eyes in the face’).
- Compound nouns (flor de estufa ‘greenhouse plant’ (delicate person); mão de ferro ‘iron fist’). Apart from inflection, we observed alternation between simple elements and elements with suffixes.
- Proverbs (grão a grão enche a galinha o papo lit. ‘grain by grain the hen fills its belly’ (little strokes fell great oaks)). As in compositional proverbs, we also observed lexical variation (grão a grão enche muita gente o papo lit. ‘grain by grain lots of people fill their bellies’).

In what idiomatic expressions are concerned, it is important to note the fact that the transposition of an expression to another semantic field is a synchronous process that usually implies that at some point in time (including the present day) the expressions may simultaneously present compositional and idiomatic meanings (porto de abrigo ‘harbor’; ‘safe haven’). Curiously, from a statistical point of view, our study showed that the idiomatic meaning is the one that usually presents high frequency of occurrence. This information, together with the interpretation of the context, may help the automatic systems to decide whether they face a compositional or idiomatic expression.

In a sweeping look at the data, we observed that MWE show particular properties according to their syntactic pattern. Thus, at the sentence level (proverbs and aphorisms), MWE usually do not accept syntactic changes (the possible change seems to be lexical, when speakers substitute one or more elements), while verb phrases admit much more morphosyntactic variation. Noun phrases, on the other hand, raise specific issues. Compositional groups can behave as idiomatic ones and it is not always easy to distinguish them. The modifiers of the noun can express different semantic relations (part of, made of, used for) that may interact with the meaning (literal or idiomatic) of the noun.

4 Annotation of the Lexicon

The information presented on our typology will allow us to enrich the lexicon mentioned in Section 2. Our purpose is to have each MWE entry in the lexicon labeled regarding: (i) canonical form of the expression; (ii) definition of idiomatic expressions through synonyms or literal paraphrases; (iii) grammatical category of both the expression and its elements; (iv) idiomatic property and additional meanings; (v) possible variation; (vi) function of MWE parts (e.g., obligatory, optional, free).

As we have seen before, MWE have different types of variation for which we have to account for. We will briefly discuss our proposal for handling the annotation of some cases of lexical and syntactic variation in the lexicon.

Lexical Variation

- Insertion of modifiers – lexical elements (usually with an emphatic function) that do not belong to the canonical form are not part of the MWE and

---

11 Cf. Sanromán, 2000.
are not labeled (\textit{sorriso muito amarelo} lit. ‘smile very yellow’).

- **Lexical substitution** – This variation is restricted to limited set of alternatives. This set is recorded in the MWE lexicon as ‘obligatory parts of the MWE and member of a set list’ (\textit{comer}/\textit{vender}/\textit{comprar}/\textit{impingir}/\textit{levar gato por lebre} lit. ‘eat/sell/buy/impose/take a cat instead of a hare’ (buy a pig in a poke)).

- **Free lexical elements** – These elements are marked in the lexicon with, e. g., a pronoun (\textit{ALGUÉM} ‘someone’, \textit{ALGUM} ‘something’) or a particular phrase (\textit{NP, PP} (\textit{estar nas mãos de ALGUÉM} ‘to be in the hands of someone’).

There are also cases where parts of the MWE may freely vary, while other parts remain fixed (\textit{a educação é a mãe de todas as civilizações} ‘education is the mother of all civilizations’, \textit{a liberdade é a mãe de todas as virtudes} ‘liberty is the mother of all virtues’). These cases are treated likewise (\textit{ALGO é a mãe de todas as NOUN-PL} ‘something is the mother of all NOUN-PL’).

Also, since creative use of language can lead to MWEs that only partly match the canonical MWE (cf. proverbs), we label these parts as ‘\textit{different from canonical form}’.

**Syntactic Variation**

- **Pronouns/Possessives** – These elements will be marked up as part of the MWE, but will have an additional label to signal that they are optional (\textit{estar nas mãos dele/estar nas suas mãos} ‘to be in the hands of him/to be in his hands’).

- **From active to passive voice** – Auxiliary verbs are not labeled as part of the MWE (\textit{passar ALGO/ALGO foi passado} ‘pass something with a fine tooth-comb’/‘something was passed with a fine tooth-comb’ (to scrutinize)).

According to Hendrickx et al. (2010a), this annotated lexicon could be the basis for the annotation of idiomatic MWE in running text\footnote{The authors’ approach is to annotate CINTIL corpus, a 1M word corpus of both spoken and written data from different sources that has been previously annotated with linguistic information such as part-of-speech, lemma, inflection, proper names, etc. (http://cintil.ul.pt/pt/).}. Each MWE encountered in the corpus would be annotated with a link to the corresponding entry in the lexicon. Linking each MWE to its canonical form would allow for an easier detection of all occurrences of one particular MWE and check its variation in the corpus. The annotation process would combine automatic retrieval with manual validation in order to better account for variable expressions. Without doubt, the corpus would contain many MWE that were not yet listed in the lexicon. Therefore, each sentence would need to be checked manually for new MWE and the newly discovered expression would be manually added to the lexicon.

5 Conclusion

This paper has shown the ongoing research that aims to describe, as detailed as possible, the syntactic and semantic properties of different types of Portuguese MWE. During our analysis, we encountered two major problems: (i) the evaluation of the meaning of certain expressions (compositional or idiomatic); (ii) the attempt to account for all possible lexical and syntactic variation. The information obtained from the typology will be used to annotate a MWE lexicon. Having a resource with such information (that includes additional meanings, possible variation that accounts for obligatory and optional elements, etc.) will be of extreme value for the development and evaluation of automatic MWE identification systems.
