Supplementary Figure 1: Merged H&E images and violin plots displaying measurements from individual mice at different ages.
A) Example of merged H&E images from a WT female, while B is a Kmt2d+/βGeo female tissue section. C-E) Violin plots of minimum Feret’s diameter measurements. Each violin plot shows data collected from an individual mouse. In each graph WT mice are shown in grey, Kmt2d+/βGeo mice are in green.
