Since January 2020 Elsevier has created a COVID-19 resource centre with free information in English and Mandarin on the novel coronavirus COVID-19. The COVID-19 resource centre is hosted on Elsevier Connect, the company's public news and information website.

Elsevier hereby grants permission to make all its COVID-19-related research that is available on the COVID-19 resource centre - including this research content - immediately available in PubMed Central and other publicly funded repositories, such as the WHO COVID database with rights for unrestricted research re-use and analyses in any form or by any means with acknowledgement of the original source. These permissions are granted for free by Elsevier for as long as the COVID-19 resource centre remains active.

Abstract

Context. Evidence from prior public health emergencies demonstrates palliative care’s importance to manage symptoms, make advance care plans, and improve end-of-life outcomes.

Objective. To evaluate the preparedness and capacity of palliative care services in the Middle-East and North Africa region to respond to the COVID-19 pandemic.

Methods. A cross-sectional online survey was undertaken, with items addressing the WHO International Health Regulations. Nonprobabilistic sampling was used, and descriptive analyses were conducted.

Results. Responses from 43 services in 12 countries were analyzed. Half of respondents were doctors (53%), and services were predominantly hospital based (84%). All but one service had modified at least one procedure to respond to COVID-19. Do Not Resuscitate policies were modified by a third (30%) and unavailable for a fifth (23%). While handwashing facilities at points of entry were available (98%), a third had concerns over accessing disinfectant products (37%), soap (35%), or running water (33%). The majority had capacity to use technology to provide remote care (86%) and contact lists of patients and staff (93%), though only two-fifths had relatives’ details (37%). Respondents reported high staff anxiety about becoming infected themselves (median score 8 on 1–10 scale), but only half of services had a stress management procedure (53%). Three-fifths had plans to support triaging COVID-19 patients (60%) and protocols to share (58%).

Conclusion. Participating services have prepared to respond to COVID-19, but their capacity to respond may be limited by lack of staff support and resources. We propose recommendations to improve service preparedness and relieve unnecessary suffering. Key message
This study addresses an important gap in the preparedness of palliative care services in the Middle-East and North Africa region to respond to COVID-19 pandemic and other outbreaks. Our survey led to seven recommendations aiming at improving their preparedness and supporting the region’s health systems in relieving unnecessary suffering.

Introduction
Elderly people and those with underlying health conditions, such as cancer, are most at risk of developing severe COVID-19 or dying.1–3 Comorbidities such as diabetes and cardiovascular disease are highly prevalent in the Middle-East, raising concerns for the progress of the pandemic in the region.4 In weaker health systems, there is limited capacity to care for COVID-19 patients who require intensive care units because of moderate to severe forms of the disease or complex symptoms such as breathlessness.2,5

Palliative care is explicitly recognized under the human right to health, relieving the suffering of patients and families and improving their quality of life and outcomes while saving health-care costs.6–8 The World Health Assembly has called on countries to provide palliative care in the clinical management of COVID-19 patients.9,10 This would address the emerging evidence for palliative care needs among COVID-19 patients, including physical symptoms (e.g. fever, breathlessness, fatigue, cough),2,11 spiritual distress related to survival, and psychological distress related to prognosis uncertainty.12,13

Under the 2015 International Health Regulations (IHR), countries are required to prepare response plans for public health emergencies of international concern.14,15 However, preparedness plans routinely fail to include palliative care.16–18 The role of palliative care in pandemic responses has been demonstrated, including sharing symptom management protocols and training nonpalliative care health-care workers, supporting patients’ triage and providing psychosocial and bereavement care.19 The “COVID-19 tsunami of suffering” is likely to increase the need for palliative care, especially in low- and middle-income countries.8

In 2012, national health systems in the Middle East region used their influenza surveillance systems to detect the MERS-CoV, and most countries have tested their preparedness plans.14,19–25 In Middle Eastern countries with fragile or limited health-care systems, the COVID-19 pandemic may cause enormous challenges to fragile health systems.36,27

Palliative care in the Middle East and North African region is a relatively new development, with no country having fully integrated it within the health system.28,29 With a Muslim majority in the region, the pandemic may have an additional religious or spiritual impact for populations.30–33 A systematic review of end-of-life care in Muslim-majority countries highlighted the central role of families in the decision-making process, as well as the need for spaces to perform rituals and to address preferences for pain management.34 The preparedness and capacity of palliative care services to respond to COVID-19 in the MENA region is still unknown. To inform policy and appropriate and timely responses, we aimed to evaluate the preparedness and capacity to respond to COVID-19 within palliative care services of the Middle-East and North Africa region.

Method
Study Design and Settings
We developed, piloted, and conducted an exploratory cross-sectional online survey, using WHO’s 2005 International Health Regulations35 and online survey methodological guidelines35,36

Population and Sampling
Nonprobabilistic sampling combining convenience and snowball sampling was used to recruit representatives of palliative care services in the Middle East and North Africa region: Afghanistan, Algeria, Bahrain, Egypt, Iran, Iraq, Jordan, Kuwait, Lebanon, Libya, Morocco, Oman, Palestine, Pakistan, Qatar, Saudi Arabia, Syria, Tunisia, Turkey, United Arab Emirates, Yemen. We aimed to recruit at least one service per country and to have only one respondent per service. The services included hospices, hospital services, and home- and community-based care.

There is no comprehensive formal list, registry, or network of palliative care services for the Middle-East region. There are limited palliative care services and publicly available information on the existing official registry of palliative care services for the countries that could give a framework to draw a representative sample of services. Therefore, we identified services using publicly available information and the research team’s networks as follows. We yielded 60 contacts from the Atlases of Palliative Care,37–39 International Association for Hospices and Palliative Care (IAHPC) directory,40 and a rapid Google and PubMed search. We yielded a further 160 contacts from our professional networks, partners of Research For Health in Conflict in the Middle-East and North Africa (rhema.org), and disseminated our survey through the World Health Organization’s Eastern Mediterranean Region (WHO-EMRO) network for palliative care. Countries from WHO-EMRO located in sub-Saharan
Africa were approached in a separate survey we conducted with the African Palliative Care Association.\textsuperscript{41}

\textbf{Data Collection}

The original survey questionnaire was initially designed by researchers from Italy and the UK for an early assessment of the Italian palliative care response early during the COVID-19 pandemic who shared with us the questionnaire in English.\textsuperscript{42} We further developed it to include existing international recommendations, especially the IHR, and evidence for generic preparedness to respond to infectious disease outbreaks or pandemics,\textsuperscript{19,23–25,35–47} and recommendations for palliative care response and roles in epidemics and pandemics.\textsuperscript{16,17} R4HC-MENA research team members adapted the survey to the region using professional experience and key preparedness literature for the region.\textsuperscript{19,20,26,48} The full questionnaire was available in English and Arabic (see Appendix I and II). It was developed in English then translated into Arabic by a bilinguistic professional translator, and the translations were reviewed by two independent experts. The translation was then tested during the pilot, where two researchers not involved in the translation completed both versions and gave feedback. No corrections were suggested.

Data were collected online using the SmartSurvey\textsuperscript{™} platform, permitting one answer per computer on the online platform, and enabled the anonymity function so IP addresses were not collected. The survey link was emailed to 190 contacts across the region, inviting them to participate (institutions providing care) and disseminate (via professional networks).

Recruitment to the online survey was opened on 05/26/2020 and closed on 06/22/2020, with responses permitted until 06/26/2020. Reminders to complete the survey were sent twice during the period.

\textbf{Data Analysis}

Descriptive analyses were conducted following de-duplication. Quantitative data were analyzed using Stata (version 16): categorical variables described as frequencies and percentage; continuous variables as median and interquartile range (IQR). Open-ended questions were coded thematically, and the dominant themes reported.\textsuperscript{49}

\textbf{Ethics}

Ethical approval was obtained from King’s College London Research Ethics Office (reference LRS-19/20–19,091). Data were collected and stored following the UK 2016 General Data Protection Regulation. Informed consent was obtained online from participants within the survey.

\textbf{Findings}

\textbf{Respondents and COVID-19 Situation in Their Services}

There were \(113\) engagements with the online survey (65 for the English version and 48 for the Arabic one), 69 individuals completed the survey (37 in English and 32 in Arabic) of which 67 gave consent (completion rate: 59\%). The final sample was 43 (33 English and 10 Arabic) after de-duplication. Of 21 countries in the region, 12 had a least one participant (57\%). We received no participation from nine countries (Afghanistan, Algeria, Iraq, Qatar, Tunisia, United Arab Emirates, Yemen) (33\%). For two countries (Libya and Syria), we could not identify a contact (9\%).

Table 1 describes the participants’ characteristics. Half were medical doctors (53\%) and one-fifth were nurses (19\%). Two in five services were public or governmental (40\%) and the majority were hospital based (84\%). Responding services had a median of 500 patients per year (IQR: 200–2500; 4 missing data), and 33 services reported having beds (median: 13; IQR: 8–25).

\begin{table}

*Doctor + Manager or responsible of the service (\(n = 3\)); Nurse + Manager or responsible of the service (\(n = 1\)); Nurse + Psychosocial professional + Manager or responsible of the service (\(n = 1\)).

\textsuperscript{a}Mixed: public + nonprofit (\(n = 2\)); public + private (\(n = 1\)).

\textsuperscript{b}Multiple choices allowed.
At the time of the survey, two-thirds of respondents had experienced a COVID-19 case within their service, with a median of five cases (IQR: 3–10.5) (see Appendix III and IV). Most cases included patients (81%) and were identified in another service within the hospital (61%).

**Policies and Procedures**

Table 2 describes the policies and procedures available or modified in response to the COVID-19 pandemic. While the vast majority reported having a written procedure for “what to do” in case of COVID-19 in the service among patients, staff, volunteers (77–88%), a third did not have or were unsure (21% and 9% respectively) to have a COVID-19 case definition (confirmed, probable, and suspect).

All but one service had modified at least one of their procedures in response to the COVID-19 pandemic, especially for operators’ protection (91%) and visitors and relatives (88%). However, fewer had modified their volunteer support (56%) and Do Not Resuscitate (30%) policies, with one-quarter not having these policies in place (i.e. N/A response; 23%).

**Infection Control Measures and Resources**

The majority of participants reported having in place several measures to control infection and knew how to access resources in case of outbreak or lockdown (see Tables 3 and 4). All but one had hand-washing facilities at entry points and half of those were there before COVID-19. Four in five provided additional personal protective equipment for palliative care staff (84%) and cleaners (79%) and identified an isolation room (81%). A majority had up-to-date inventories of medicines and medical supplies (86%) and personal protective equipment (81%) available. Respondents knew how to dispose of highly infectious waste in the service (84%), had materials and facilities to dispose of it (91%), and had staff trained in handling highly infectious conditions (90%), of which half were trained before COVID-19. However, one-third had concerns regarding access to essential resources for ensuring safe care: disinfectant products (37%), soap (35%), hand sanitizers (35%), running water (33%), contactless thermometers (33%), and electricity (28%). These concerns were higher for access in the surrounding community.

**Information Systems, Communication, and Technology**

The respondents had communication channels identified for use during the pandemic (see Appendix V). Three in four had a designated focal point for collecting and sharing up-to-date information (72%). The majority would use mobile phones to receive information (77%) and phone calls to share

### Table 2

| Procedures (or Guidance) in Place and Policies Modified (N = 43) | Yes | No | Unsure or Do not Know | Missing or N/A |
|---------------------------------------------------------------|-----|----|-----------------------|----------------|
| Case definition for confirmed, probable, and suspected COVID-19 cases | 30 (70) | 9 (21) | 4 (9) | 0 (0) |
| Written procedure for “what to do” in the service in case of COVID-19 case among Patients | 38 (88) | 4 (9) | 0 (0) | 1 (2) |
| Health-care professional staff member | 35 (88) | 3 (7) | 1 (2) | 1 (2) |
| Volunteers and medical staff | 35 (81) | 5 (12) | 2 (5) | 1 (2) |
| Relatives and visitors | 33 (77) | 6 (14) | 3 (7) | 1 (2) |
| Staff and volunteers going in the community | 28 (65) | 7 (16) | 7 (16) | 1 (2) |
| Written procedure for “what to do” in the service in case of infectious diseases among Patients | 28 (65) | 6 (14) | 5 (12) | 4 (9) |
| Relatives and visitors | 24 (56) | 7 (16) | 7 (16) | 5 (12) |
| Health-care professional staff member | 30 (70) | 4 (9) | 6 (14) | 3 (7) |
| Volunteers and medical staff | 26 (60) | 5 (12) | 7 (16) | 5 (12) |
| Staff and volunteers going in the community | 19 (44) | 8 (19) | 12 (28) | 4 (9) |
| Policies or procedures modified as a measure to avoid contagion Operators’ protection (personal protective equipment) | 39 (91) | 1 (2) | 0 (0) | 3 (7) |
| Visitors/relatives (number of visitors, hours, etc.) | 38 (88) | 0 (0) | 2 (5) | 3 (7) |
| Dead body handling | 35 (81) | 4 (9) | 3 (7) | 1 (2) |
| Patients’ admission to the service | 34 (79) | 1 (2) | 3 (7) | 5 (12) |
| Volunteer support | 24 (56) | 6 (14) | 6 (14) | 7 (16) |
| Care of the relatives after the patient’s death | 19 (44) | 13 (30) | 7 (16) | 4 (9) |
| Do Not Resuscitate | 13 (30) | 16 (37) | 4 (9) | 10 (23) |
| Recommendations to support health-care providers to manage stress | 25 (53) | 16 (37) | 4 (9) | 0 (0) |
| Recommendations if you or someone in your household becomes ill with COVID-19 symptoms | 39 (91) | 3 (7) | 1 (2) | 0 (0) |
information in case of emergency (65% with staff; 91% with patients and relatives).

Almost all services had up-to-date lists of patients and staff (93%), and collected patients’ symptoms, outcomes (95%) and treatment (98%) (see Appendix VI). Two-thirds used electronic records to collect the latter health information (81%). However, two in five services did not collect visitors’ and relatives’ contact details or visit dates (37%).

The vast majority reported having the capacity to use technology to provide remote care (86%). Twenty-seven participants shared perceived advantages and disadvantages of using technology (see Appendix VII–XII). The key limitations were a lack of resources (e.g., lack of Internet coverage or devices for patients) \((n = 9)\); trust issues from users and cooperation from patients’ family \((n = 4)\), appropriateness issues regarding age or condition \((n = 3)\) or a lack of

| In the community                                     | 27 (63) | 9 (21) | — | 7 (16) |
| Cleaning staff included in information sharing and training regarding managing COVID-19 | 34 (79) | 3 (7) | — | 6 (14) |
| Having education material about COVID-19 available    | 36 (84) | 6 (14) | — | 1 (2) |
| Posters displayed where staff, patients, and visitors can see them \((N = 36)\) | 33 (92) | 3 (8) | — | — |
| Education material also available for the surrounding community \((N = 36)\) | 31 (86) | 1 (2) | — | 1 (2) |
body language to effectively communicate \((n = 3)\) were the most reported. One participant was concerned about relatives hiding information from the patients. However, several advantages were also shared, such as the ability to deliver care and manage patients remotely \((n = 8)\); and control of potential transmission \((n = 6)\).

**Palliative Care Staff and Expertise to Support Pandemic Response**

Respondents reported high anxiety among staff, especially risk to them of becoming infected \((\text{median score 8 on 1–10 scale; IQR: 7–9})\) and their ability to care for their relatives \((\text{median score 8 on 1–10 scale; IQR: 6–9})\) (see **Table 5**). However, only half of the services had a staff stress management procedure \((53\%)\).

**Table 6** shows that responding services have the capacity to support the broader health system to respond to COVID-19. Three in five services had plans to support other health-care settings in triaging COVID-19 patients \((60\%)\) and protocols to share for symptom management and psychological support \((58\%)\). Among the 25 respondents who could share those protocols, the majority declared they could train non-specialists in using them \((72\%)\). About half of the services had redeployment plans for palliative care staff and resources, although \(20\%\) did not know if they had such plans. A third of the services did not have or did not know about plans to redeploy volunteers.

**Discussion**

Our survey provides the first comprehensive assessment of the preparedness of palliative care services in the Middle-East and North African region to respond to a pandemic. Responding services have prepared to respond to COVID-19, but their capacity to respond may be limited by the lack of access to infection control basics and community-based services, especially in case of a lockdown. Lack of support to staff in managing their stress and anxiety is a major concern. This is crucial to equip them to deliver sustained care to existing non-COVID and new COVID-19 patients and their families and to fulfill their potential in supporting the wider health service during the epidemic.

In line with findings from our recent survey of African palliative care services, the respondents were aware of the communication channels to be used in case of emergency, had up-to-date lists of staff and patients that would facilitate contact tracing in case of an outbreak, and had modified policies regarding operators’ protection and visits. However, among the MENA region’s respondents, there was a higher proportion of services using electronic records, which would facilitate rapid contact tracing and patients’ monitoring in case of an outbreak. The region has developed electronic medical records, particularly in hospitals) and most respondents were hospital based. However, it is important to note that our rapid survey may be biased toward most advanced services that are part of national or international networks. Further research would be needed to assess the penetration of electronic health information systems in more remote and nonhospital-based palliative care services.

In line with recommendations on the role of palliative care services in responding to epidemics, most services had protocols for symptom management and bereavement to share and were ready to support COVID-19 patients triage. This may be because two-thirds already had a COVID-19 case in the hospital they were based in or had learned from previous experience with MERS-CoV in the region. The lack of plans to redeploy staff, or resources, or of stress management procedures for staff identified threaten staff well-being and sustainability of patient care. The establishment of a regional association collecting and sharing protocols and resources in the languages of the region may help address this gap.

Regarding using technology to avoid face-to-face interactions, while the majority of services reported they had the capacity, it will be important to further investigate some of the barriers identified in the survey.

**Table 5**

| Perceived Effects of COVID-19 on Staff and Risks for the Service \((N = 43)\) | Median (IQR) |
|---|---|
| **Perceived effects on staff** | |
| Anxious about getting infected themselves\(^a\) | 8 (7–9) |
| Anxious about the need to care for their own relatives\(^a\) | 8 (6–9) |
| Anxious about the need to care for their children who may not be at school\(^b\) | 8 (6–9) |
| Worried regarding potential issues for their interaction with the community if the service is known to manage a potential COVID-19 case\(^c\) | 7 (5–8) |
| **Perception of risks in the coming week\(^a\)** | |
| Hospice/palliative care staff are at risk of being infected by COVID-19 | 5.5 (4–7) |
| Hospice/palliative care service is at risk of closing because of an infection in the hospice or service | 5 (2–7) |

\(^a\) 2 missing data.

\(^b\) 1 missing data.
The barriers reported by participants, such as lack of resources or trust issues, reflect those reported in the wider e-health implementation literature. Further research is needed to assess access and reliability of the connectivity required for e-health in MENA countries, focusing on the specificities of the regional and cultural context and related to Muslim-majority countries. Technology has advantages to reducing potential infections and solutions to reaching hard-to-reach groups need to be further explored, especially to reach out to forcibly displaced populations in a region widely affected by conflicts.

Strengths and Limitations
This rapid survey provides the first comprehensive assessment of the preparedness of palliative care services in the MENA region. We used a standardized questionnaire using international guidelines and standards adapted to the region, enabling international comparison. We have insights for 12 countries from the region with a broad geographical range. The lack of a comprehensive list of PC services in the region may have introduced a sampling bias, which may limit the generalizability of our findings, but we developed a plan to identify and include as many eligible participants as possible. It is noteworthy that the limited number of respondents per country may also demonstrate the difficulty in contacting and mobilizing palliative care services in the region in response to public health emergencies of international concern. The questions regarding the availability of medicines that we used were generic as we used the IHR. While detailed investigation into the challenges of drug availability was beyond the scope of this study, further investigation of the potential issues in accessing opioid, especially in MENA countries, is warranted. Finally, while having more than one respondent per service would have allowed capturing potentially different views from various staff, our criteria of sampling the individual responsible for the service gave a rapid assessment in an urgent context. Although we de-duplicated responses based on key characteristics, more than one participant may have responded from a single service.

Recommendations
This study provides urgently needed primary evidence to inform policy and practice in the region. Of utmost importance, we call for appropriate resources to support staff and palliative care services. We propose the following recommendations for policy and practice.

1. Governments and services should ensure that basic water and sanitation are available to ensure a safe provision of palliative care with implementation of infection control measures.
2. Governments and services should also allocate funding to equip their palliative care facilities, staff, and potentially the patients’ access to devices, such as mobile smartphone.
3. All palliative care services need to acquire stress management protocols and offer services to support the staff. Palliative care staff well-being and views should be assessed, especially before deciding to redeploy them.
4. Palliative care services need to be involved in supporting and training nonspecialist health-care workers in complex questions related to the care of the dying. This is particularly relevant in light of the scarcity of resources faced by the health systems and health-care professionals, raising ethical issues and difficult discussions related to the triage and resuscitation.
5. We advise palliative care services in the region to develop DNR policies when absent and adapt them early before the crisis emerge. Such decisions need to be evaluated using a social justice lens and inform ethical discussions on resuscitation debates on COVID-19.

Table 6

| Plans to redeploy at least one of the following outside of the inpatient settings, in case of outbreak COVID-19 or another highly infectious disease | Yes | No | Do not Know or N/A | Missing |
|---|---|---|---|---|
| Health-care providers | 21 (49) | 10 (23) | 8 (19) | 4 (9) |
| Resources (material and supplies) | 19 (44) | 10 (23) | 8 (19) | 6 (14) |
| Volunteers | 12 (28) | 10 (23) | 6 (14) | 7 (16) |
| Plans to support other health-care services in the triage of patients in case of COVID-19 outbreak | 26 (60) | 15 (35) | - (--) | 2 (5) |

| Palliative care protocols for symptom management and psychological support that could be shared with nonspecialist staff and/or COVID-19 response teams in other health-care facilities | 25 (58) | 17 (40) | - (--) | 1 (2) |

| If yes, capacity to train nonspecialist in using these protocols (N = 25) | 18 (72) | 6 (24) | - (--) | 1 (4) |
Palliative care services would need to ethically allocate their resources while maintaining dying patients’ dignity, and ensure appropriate communication with caregivers.

6. We call on governments to integrate palliative care into the preparedness plans as recommended in the WHO publications, to prevent unnecessary suffering and foster a rapid and flexible response in case of public health emergencies. We also call on the WHO to revise the IHR to support and evaluate countries’ preparedness progress and reflect the necessity of palliative care into the emergency.16

7. Finally, we propose the development of the National Palliative Care Reference Center in the MENA region based on the model of National Reference Laboratories in the WHO-IHR.15 Such centers could be rapidly mobilized and foster the achievement of Universal Health Coverage. The National Palliative Care Reference Center could collect, compile, and share the most up-to-date information and protocols with other palliative care services within their countries and the region; but also train non-specialists and less advanced or resourced palliative care providers in case of emergency, and beyond. They could be coordinated by a regional association or an existing network such as the WHO-EMRO palliative care expert network.

Disclosures and Acknowledgments

The authors have no conflicts of interest to disclose. The authors would like to thank Shayma’a Turki, Ayman Issa and Dr. Nour Horanieh for their help in English-Arabic translations; Ghadeer Al-Arja and Waled Alrjoob for their help in piloting the survey; and the World Health Organization’s Eastern Mediterranean Region (WHO-EMRO) network for palliative care for their support and help in data collection.

Sabah Boufkhed, Richard Harding (RH), Tezer Kutluk, and Omar Shamieh are funded through the UK Research and Innovation GCRF Research for Health in Conflict (R4HC-MENA); developing capability, partnerships and research in the Middle and Near East (MENA) ES/P010962/1. The overall vision for the R4HC-MENA partnership is to build sustainable research and policy capacity in the region to address major health challenges arising from conflict. R4HC-MENA activities aim to facilitate more effective translation of research into policy and deliver impact on both the research community and for patients and vulnerable populations. Appendix I

Questionnaire in English

Note: Question with an asterisk were compulsory.
COVID-19 preparedness in hospices and palliative care services in the Middle-East and North Africa.

ABOUT YOU AND YOUR SERVICE

*In which country is your service in?

☐ Afghanistan ☐ Kuwait ☐ Qatar
☐ Algeria ☐ Lebanon ☐ Saudi Arabia
☐ Bahrain ☐ Libya ☐ Syria
☐ Egypt ☐ Morocco ☐ Tunisia
☐ Iran ☐ Oman ☐ Turkey
☐ Iraq ☐ Palestine ☐ United Arab Emirates
☐ Jordan ☐ Pakistan ☐ Yemen

Characteristics of your hospice/palliative care service:

• Approximate number of patients seen per year:
• *Type of hospice and/or service: (tick all that applies)
  ☐ Private ☐ Non-profit charity ☐ Government or public.
  ☐ Within a hospital ☐ Within community
  ☐ Inpatient hospice ☐ Outpatient hospice ☐ Other, please specify:
• Do you have beds: ☐ Yes ☐ No

IF YES, Number of beds:
*What is your current role? (tick all that applies)

☐ Doctor or medical officer.
☐ Nurse.
☐ Psychosocial professional.
☐ Manager or responsible of the hospice or palliative care service.
☐ Other, please specify:

CURRENT COVID-19 SITUATION IN YOUR SERVICE

1. *Did you have a suspected or confirmed cases of COVID-19 in your service or in the hospital you are based in?

☐ yes, confirmed cases ☐ yes, probable cases ☐ yes, suspect cases ☐ no (If no, go to Q.2)

IF YES:

- Who was positive? (tick all that applies)
  ☐ patients.
  ☐ relatives.
  ☐ physicians.
  ☐ nurses.
  ☐ volunteers.
  ☐ other (e.g. administrative or cleaning staff), please specify:
- How many cases did you have (specify numbers for suspected, probable, confirmed)?
- Where were the cases identified?
  ☐ your service or hospice ☐ another service of the hospital you are based in.
- How were they identified? (e.g. who informed you, which communication means (phone, email, etc.)
- What was done? (e.g. reporting, referral, containment measures, protection of and communication with staff and users, etc.)
- What were the consequences? (e.g. for your service, yourself, your interaction with the community, etc.)

WRITTEN PROCEDURES (OR GUIDANCE)

2.1 *Do you have a case definition for confirmed, probable and suspected COVID-19 cases?

☐ yes ☐ no ☐ do not know/not sure.
2.2 Do you have a written procedure for “what to do” if you have a confirmed, probable and/or suspected COVID-19 case in your service among:

| Procedure Specific to COVID-19 | Procedure for Infectious Diseases in General or to Another Specific Highly Infectious Disease (e.g. Influenza, Ebola, Tuberculosis, etc.) |
|--------------------------------|-----------------------------------------------------------------------------------|
| - patients                     | □ yes □ no □ don’t know                                                             |
| - relatives and visitors       | □ yes □ no □ don’t know                                                             |
| - healthcare professional staff member | □ yes □ no □ don’t know                                                             |
| - volunteers and medical staff | □ yes □ no □ don’t know                                                             |
| - staff and volunteers going in the community | □ yes □ no □ don’t know                                                             |
| - Other, please specify:       | □ yes □ no □ don’t know                                                             |

2.3 Do you have a procedure to support healthcare providers to manage stress? □ yes □ no □ don’t know

(optional) Please specify or comment:

(optional) Additional thoughts on policies and protocols?

MEASURES IN PLACE (TO AVOID CONTAGION)

3.1 Did you modify any of the following policies or procedures as a measure to avoid contagion?

- Policy for visitors/relatives (number of visitors, hours etc.) □ yes □ no □ not sure □ N/A
- Policy for operator protection (personal protective equipment) □ yes □ no □ not sure □ N/A
- Policy for patients’ admission to the hospice □ yes □ no □ not sure □ N/A
- Volunteer support policy □ yes □ no □ not sure □ N/A
- Policy on how to handle dead patients □ yes □ no □ not sure □ N/A
- ‘Do Not Resuscitate’ (DNR) policy □ yes □ no □ not sure □ N/A
- Policy regarding care of the relatives after the patient’s death □ yes □ no □ not sure □ N/A
- Other policy modified, please specify:

Please tick N/A if you do not have the corresponding policy or procedure in place.

IF YOU ANSWERED YES TO ANY OF THE ABOVE:

Did you change the policies following the instructions from health management or regional authorities, or did your hospice take them spontaneously?

□ following the instructions □ spontaneously □ both.

3.2 Do you have in place any of the following measures to protect staff and patients:

- Hand washing facility for all at points of entry (soap and running water or hand sanitizers with 60% alcohol): □ Yes, we put additional ones □ We already had them in place before COVID-19 □ No, we do not have such facility.
- Personal Protection Equipment (PPE) for:
  - palliative care staff: □ Yes, we put additional ones □ Not more than usual □ No, we do not have PPE
  - cleaning staff: □ Yes, we put additional ones □ Not more than usual □ No, we do not have PPE
- Isolation room identified in case of infectious conditions, like COVID-19: □ Yes □ No □ N/A (outpatient service only)
- Recommendations if you or someone in your household becomes ill with COVID-19 symptoms □ yes □ no □ don’t know.

IF YOU ANSWERED YES TO ANY OF THE ABOVE:

Did you put the measure in place following the instructions from health management or regional authorities, or did your hospice take them spontaneously?

□ following the instructions □ spontaneously □ both.

3.3 Have all healthcare providers been trained in handling highly infectious conditions such as COVID-19?

□ Yes, trained before COVID-19 pandemic □ Yes, trained because of COVID-19 pandemic □ Not trained.

3.4 Do you know how to dispose of highly infectious waste?

- in the hospice or service □ Yes □ No □ N/A (outpatient service only)
- in the community □ Yes □ No □ N/A (inpatient/hospice service only)
3.5. Was the cleaning staff included in information sharing and training regarding managing COVID-19?

(e.g. adapting practice in case of COVID-19 suspected)  □ Yes  □ No  □ Don’t know/Not sure.

(optional) Additional thoughts on measures in place to avoid contagion:

COMMUNICATION AND COORDINATION

4.1 How would you be informed if there is a confirmed or suspected case in the hospice or in the locality?

- Who or which institution will inform your hospice or service?
- Who will be informed in your hospice or service (position or job title)?
- Communication system(s) that will be used (tick all that applies)
  □ Mobile phone available 24/7.
  □ Telephone (in the service)
  □ Email.
  □ WhatsApp/Viber group.
  □ Other, please specify:

4.3 Is there a focal point person identified in the hospice or service responsible for collecting and sharing up-to-date information (about health recommendations, cases, protocols to use):  □ yes  □ no  □ not sure

Please specify (job title/position):

4.4 What communication means are in place to share COVID-19 or other urgent information with … (tick all that applies)

- the staff?: □ Text message □ WhatsApp/Viber □ Phone call □ Email □ None □ Other, specify
- patients?: □ Text message □ WhatsApp/Viber □ Phone call □ Email □ None □ Other, specify
- relatives, visitors?: □ Text message □ WhatsApp/Viber □ Phone call □ Email □ None □ Other, specify

4.5 Do you have an up-to-date contact list of …

| all staff | □ Yes, a paper-based registry □ Yes, an electronic record □ No □ Other: |
| all patients | □ Yes, a paper-based registry □ Yes, an electronic record □ No □ Other: |
| all relatives | □ Yes, a paper-based registry □ Yes, an electronic record □ No □ Other: |
| patients visited in the community? | □ Yes, a paper-based registry □ Yes, an electronic record □ No □ Other: |

4.6 Do you have a system collecting information about …

- Patients’ symptoms?
- Patients’ outcomes?
- Treatment given?
- Dates of patients’ visits or stay?
- Dates of relatives’ visits?

(□ Yes, a paper-based registry □ Yes, an electronic record □ No □ Other:)

(optional) Additional thoughts on communication and coordination?

5. RESOURCES

5.1 Do you have concerns about access to …

| In Your Hospice or Service? | In the Surrounding Community? |
|----------------------------|-----------------------------|
| running water? | □ yes □ no |
| -soap? | □ yes □ no |
| -hand sanitizers (with at least 60% alcohol)? | □ yes □ no |
| -electricity? | □ yes □ no |
| -thermometers (contactless, Thermoflash-type)? | □ yes □ no |
| -accessing disinfectant products to continue providing care safely? | □ yes □ no |
| -other, please specify: | □ yes □ no |

5.2 Do you have adequate material and facilities to dispose of highly infectious waste …

- in the hospice? □ yes □ no □ don’t know/not sure
- in the community? □ yes □ no □ don’t know/not sure
5.3 Do you have an up-to-date inventory of …

- protection material available for staff, patient and visitors (hygiene and sanitation materials, protection material like masks, etc.)
  □ yes □ no □ not sure
- medicines and other medical supplies available to care for the patients?
  □ yes □ no □ not sure

5.4 Do you have the capacity to use technology instead of face-to-face appointment to provide some care remotely?
  □ yes □ no

IF YES, please specify:
- which technology? (tick all that applies): □ Phone call □ Video call □ Other, please specify:
- which service can be provided remotely? (e.g. psychological support, spiritual care, grief and bereavement, managing the end of life phase, etc.)
- what has worked well when using virtual technologies?
- what was difficult when using technologies?

IF NO, please specify:
- what are your limitations to use technology?
- what would facilitate your use of technology?

5.5 In case of emergency, lockdown or quarantine, do you know how your hospice would access to:
(e.g. Local/national authorities’ stocks, private supplier, transportation, etc.)
- food (for inpatient services only)
  □ yes □ no
- medicines and other medical supply?
  □ yes □ no
- additional staff (e.g. if staff self-isolates or becomes ill)
  □ yes □ no

(optional) Please specify:

5.6 Do you have education material about COVID-19 available?
  □ yes □ no

IF YES, are there posters displayed where staff, patients and visitors can see them?
  □ yes □ no

are they also available for the surrounding community?
  □ yes □ no

Please specify:
- Which education material do you have?
- How did you get the education material?

(optional) Additional thoughts on resources:

6. EFFECTS ON STAFF

6.1 Did you observe that some staff suddenly did not come to work without justification (i.e. more than usual)
  □ yes □ no □ not sure.

6.2 In your opinion, how anxious are your staff about the need to care for their children who may not be at school? From 1 to 10 (1-not at all anxious; 10-extremely anxious)

□ 1 (Not at all)  □ 2 □ 3 □ 4 □ 5 □ 6 □ 7 □ 8 □ 9 □ 10 (extremely)

6.3 In your opinion, how anxious are your staff about the need to care for their own relatives?
From 1 to 10 (1-not at all anxious; 10-extremely anxious)

□ 1 (Not at all)  □ 2 □ 3 □ 4 □ 5 □ 6 □ 7 □ 8 □ 9 □ 10 (extremely)

6.4 In your opinion, how anxious are your staff about getting infected themselves?
From 1 to 10 (1—not at all anxious; 10-extremely anxious)

□ 1 (Not at all)  □ 2 □ 3 □ 4 □ 5 □ 6 □ 7 □ 8 □ 9 □ 10 (extremely)

6.5 How worried are you regarding potential issues for your interaction with the community if your hospice or service is known to manage a potential COVID-19 case?
From 1 to 10 (1-not at all worried; 10-extremely worried)

□ 1 (Not at all)  □ 2 □ 3 □ 4 □ 5 □ 6 □ 7 □ 8 □ 9 □ 10 (extremely)

(optional) Additional thoughts on other potential effects of the COVID-19 on you and your staff:
7. PERCEPTION OF THE RISK

In the coming week ....

7.1 How much do you think hospice/palliative care staff are at risk of being infected by COVID-19? From 0—10 (0 no risk - 10 maximum risk you can imagine)

☐ 1 (none) ☐ 2 ☐ 3 ☐ 4 ☐ 5 ☐ 6 ☐ 7 ☐ 8 ☐ 9 ☐ 10 (maximum)

7.2 How much do you think the hospice/palliative care service is at risk of closing because of an infection in the hospice or service? From 0—10 (0 no risk - 10 maximum risk you can imagine)

☐ 1 (none) ☐ 2 ☐ 3 ☐ 4 ☐ 5 ☐ 6 ☐ 7 ☐ 8 ☐ 9 ☐ 10 (maximum)

7.3 Do you have any security concerns for yourself or your staff? ☐ yes ☐ no

IF YES, please specify ...

(optional) Additional thoughts on other potential effects of the COVID-19 on your staff:

8. PREPARING TO OFFER SUPPORT

8.1 Do you have palliative care protocols for symptom management and psychological support that could be shared with non-specialist staff and/or COVID-19 response teams in other healthcare facilities? ☐ yes ☐ no

IF YES, do you have the capacity to train non-specialist in using these protocols? ☐ yes ☐ no

Optional: what are your limitations to share your expertise?

Optional: what could facilitate the sharing of your expertise?

8.2 In case of outbreak COVID-19 or another highly infectious disease, do you have plans to redeploy the following outside of the inpatient settings?

| -Healthcare providers | ☐ yes ☐ no ☐ don’t know ☐ N/A |
| -Volunteers | ☐ yes ☐ no ☐ don’t know ☐ N/A |
| -Resources (material and supplies) | ☐ yes ☐ no ☐ don’t know ☐ N/A |

IF YES to any of the above:

Please specify in which settings they be re-deployed (e.g. community settings, another service, etc.)?

8.3 Do you have plans to support other healthcare services in the triage of patients in case of COVID-19 outbreak? ☐ yes ☐ no

(optional) Comment:

ADDITIONAL COMMENTS

What do you foresee will be the biggest challenges for COVID-19 in your service over the next 1—2 months?

What would help you most to overcome these?

Do you think there are relevant information we have omitted to ask you?

What are your biggest worries or concerns?

Feel free to share any additional thought or comment:

OPTIONAL:

Would you like to receive the results of this survey via e-mail? ☐ yes ☐ no

Would you like to be contacted in the future about opportunities about research on or advocacy for palliative care? ☐ yes ☐ no

If yes to any of the above, please share your contact details (name, organization, email):

Please note: We will separate this information from your responses to the questions, and only selected team members at King’s College London (KCL) will access it. Please note that if you agree to share your contact details, your reply will no longer be anonymous to the KCL research team. Your answers will be treated confidentially, and your data will be held securely.
FINAL INFORMATION

You can find information about COVID-19 and Palliative Care in the following resources:

- Cicely Saunders Institute for Palliative Care and Rehabilitation, King's College London www.kcl.ac.uk/cicelysaunders/resources/links
- Worldwide Hospice Palliative Care Alliance www.thewhpca.org/covid-19
- European Association for Palliative Care www.eapcnet.eu/publications/coronavirus-and-the-palliative-care-response

You can find information about COVID-19 in the following resources:

- World Health Organization (WHO) www.who.int/emergencies/diseases/novel-coronavirus-2019
- WHO EMRO www.emro.who.int/health-topics/coronavirus/information-resources.html
- WHO EURO www.euro.who.int/en/health-topics/health-emergencies/coronavirus-covid-19

If you have questions or concerns, please contact Sabah Boufkhed: sabah.boufkhed@kcl.ac.uk.
Thank you very much for your time and for taking part in the survey.
Appendix II. Questionnaire in Arabic

جاهزية دور الرعاية وخدمات العناية التلطيفية لفيروس كورونا المستجد كوفيد-19 في الشرق الأوسط وشمال أفريقيا

 أسئلة عنك وعن الوحدة التي تعمل بها

في أي دولة تقع الوحدة التي تعمل بها?

- أفغانستان
- الكويت
- الجزائر
- لبنان
- البحرين
- ليبيا
- مصر
- المغرب
- إيران
- العراق
- فلسطين
- الإمارات
- الأردن
- البحرين
- قطر
- السودان
- سوريا

مواصفات دار الرعاية/وحدة العناية التلطيفية:

عدد المرضى الذين يتم معاينتهم سنوياً: ...

نوع دار الرعاية أو وحدة العناية التلطيفية (قم باختيار جميع الخيارات المنطبقة على إجابتك):

- خاص
- خيري غير ربحي
- حكومي
- جزء من مستشفى
- مجتمعي
- دار رعاية للمرضى المنومين
- عيادات دار رعاية
- أخرى، قم بذكرها:
هل هناك أسرة في الوحدة التي تعمل بها؟

نعم/لا

في حالة الإجابة نعم، لطفاً قم بكتابة عدد الأسرة:

ما هو دورك الحالي؟

(قم باختيار جميع الخيارات المنطقة على الإجابة)

طبيب أو مسؤول طبي/مدير أو مسؤول عن دار الرعاية أو وحدة العناية التلطيفية / الأخصائي النفسي والاجتماعي/أخرى، قم بذكرها

الوضع الوظائي لفايروس كورونا المستجد كوفيد-19 في الوحدة التي تعمل بها

1. هل لديك حالة مؤكدة أو مشكوك بإصابتها بفايروس كورونا المستجد كوفيد-19 في الوحدة أو دار الرعاية التي تعمل بها؟

نعم، حالة مؤكدة

نعم، حالة محتملة

نعم، حالة مشكوك بإصابتها

لا

لا تعلم متأكدًا، لطفاً قم بذكرها...

إذا كانت الإجابة لا، انتقل إلى السؤال التالي.

إذا كانت الإجابة نعم(حالة مؤكدة، حالة محتملة، حالة مشكوك بإصابتها):
Men's Palliative Care Services Preparedness

Vol. 61 No. 2 January 2021

من هم المرضى الذين يعانون من كوفيد-19؟

(قم بتحديد جميع الخيارات المتناسبة على الإجابة)

分享
家庭
兄弟姐妹
护士
医生
专业人员
病人
另一位 (كالإدارة أو طرق التنظيف)، فقم بذكرها.

أين تم تشخيص الحالات؟

في الوحدة أو مركز الرعاية التي تعمل بها
وحدة أخرى في ذات المستشفى الذي تعمل به.

كم حالة تواجدت لديك؟

(قد يذكرها بالتفصيل من حيث المشكوك بإصابتهم أو المحتمل إصابتهم أو المؤكد إصابتهم).

كيف تم التقصي عنهم؟

(مثال: من قام بتلقيحك؟ ما هي طريقة التلقيح؟ عبر الهاتف أم عبر البريد الإلكتروني؟ الخ).

ماذا كان الإجراء المتبع؟

(مثال: التقرير، التحويل، إجراءات الاحتواء، حماية الطاقم والتواصل معهم، الخ).

ماذا كانت النتائج؟

(مثال: النتائج على وحدتك، عليك شخصياً، على تعاملك مع المجتمع، الخ)
2. الإجراءات أو الإرشادات الخطية

2.1 هل لديك تعرف للحالات المؤكد إصابتها والمحتمل إصابتها والمشكوك إصابتها بفايروس كورونا المستجد كوفيد-19؟

| الرسالة | الإجابة |
|------|--------|
| نعم | لا |

لا أعرف / ليست متانداً

2.2 هل لديك إجراءات خفية لتعامل مع الحالات المؤكد إصابتها والمشكوك بإصابتها والمحتمل إصابتها في الوحدة التي تعمل بها لكل من:

| إجراء للأمراض المعدية بشكل عام أو لأمراض معينة محددة بشكل كبير (كالإيبولا أو السل) | إجراءات كوفيد-19 على وجه الخصوص |
|------|--------|
| لطفاً قم بتحديد المرض | للمرضى |
| نعم/لا لا أعلم | نعم/لا لا أعلم |
| الأقارب والزوار | موظفو الرعاية الصحية |
| نعم/لا لا أعلم | نعم/لا لا أعلم |
| المتطوعون والطواقم الطبية | المتطوعون والتطوع أنفسهم للمجتمع |
| نعم/لا لا أعلم | نعم/لا لا أعلم |
| الموظفون والموظفات المتعاطون | أخرى، فمثلاً |
| نعم/لا لا أعلم |
2. هل لديك إجراءات لدعم موظفي الرعاية الصحية للتعامل مع التوتر والقلق؟

(اختياري) بذكرها وأكتب تفصيلاً

(اختياري) يتم ذكر أية أفكار أو الاقتراحات فيما يتعلق بالسياسات والبروتوكولات

3. الإجراءات المتبقية لتجنب التفشي

3.1 هل قمت بتعديل أي من السياسات أو الإجراءات التالية بهدف تجنب التفشي؟

لطفاً قم بالإشارة على (غير متوفر) إذا لم يكن السياسة أو الإجراء متبعًا

- سياسات الزوار والأقارب (عدد الزوار وساعات الزيارة)
  - نعم/لا/لاست متاحة/غير متوفر
- سياسات حماية العاملين (معدات الوقاية الشخصية)
  - نعم/لا/لاست متاحة/غير متوفر
- سياسات إدخال المرضى إلى دار الرعاية
  - نعم/لا/لاست متاحة/غير متوفر
- سياسات التطوع
  - نعم/لا/لاست متاحة/غير متوفر
- سياسات التفاعل مع المرضى المتوفين
  - نعم/لا/لاست متاحة/غير متوفر
- سياسات عدم الإشعال
  - نعم/لا/لاست متاحة/غير متوفر
- سياسات العناية بالأقارب المتوفي بعد وفاته
  - نعم/لا/لاست متاحة/غير متوفر
- سياسات أخرى للطاقة يمكن بذكرها...

في حال كنت إجابت "نعم" لأي من الأسئلة أعلاه:
هل قمت بتغيير السياسات تبعاً لتعليمات الإدارة الصحية أو السلطات المحلية، أم أن دار الرعاية التي تعمل بها قامت بتغييرها تلقائياً؟

تبعاً لتعليمات/يشكل تلقائيا/لكلا السبيتين

3.2 هل يتم اتباع أي من الإجراءات التالية لحماية الطاقم والمريض:

- محتاجات تغسيل اليدين في كافة نقاط الدخول (الصابون والماء أو المعقمات اليدوية بنسبة تصل إلى 60%):
  - نعم، قمنا بإضافة محتاجات أخرى/كانت متواجدة قبل وباء كوفيد-19، ليست لدينا أي محتاجات كالمذكورة أعلاه

معادات الوقاية الشخصية لكل من:

- طقم العناية التلطيفية:
  - نعم، قمنا بإضافة معادات إضافية/لا شيء أكثر من المعتمد، ليست لدينا

معادات وقائية لشخصية

- طقم التنظيف:
  - نعم، قمنا بإضافة معادات إضافية/لا شيء أكثر من المعتمد، ليست لدينا

معادات وقائية لشخصية

غرف العزل للحالات المعدية كوفيد-19:

- توسيع على أو واحد أو أكثر / أهل بيتك في حالة إصابة به أعراض كوفيد-19:
  - نعم، نحن لم نذكرها/لا أعلم

إذا كانت إجابة "نعم" لأي من المذكور أعلاه:

هل قمت بتفعيل الإجراءات تبعاً لتعليمات الإدارة الصحية أو السلطات المحلية، أم أن دار الرعاية التي تعمل بها قامت بتغييرها تلقائياً؟

تبعاً لتعليمات/يشكل تلقائيا/لكلا السبيتين

3.3 هل تم تدريب جميع موظفي الرعاية الصحية على كيفية التعامل مع الحالات شديدة العدوى كوفيد-19؟

نعم، تم تدريبهم قبل وباء كوفيد-19/نعم، تم تدريبهم تبعاً لوباء كوفيد-19/لا يتم تدريبهم
3.4 هل أنت على علم بكيفية التخلص من النفايات عالية الدفء؟
- في دار الرعاية أو الوحدة التي تعمل بها: نعم/لا غير متوفر
- في المجتمع: نعم/لا غير متوفر

3.5 هل تم تدريب طواقم التنظيف وإطلاعهم على المعلومات المتعلقة بالتعامل مع وباء كوفيد 19؟
(التكييف مع التعامل مع حالات كوفيد-19 المشكوك بها)
- نعم/لا غير متوفر
- لا أعرف / لست متأكدًا
(اختياري) هل لديك آية أفكار أو اقتراحات بخصوص الإجراءات المتبعة لتجنب التفشي؟

4. التواصل والتنسيق

4.1 كيف يتم تبليغكم بوجود حالات مؤكدة أو مشكوك بأمرها في دار الرعاية أو في المجاورة؟
- ما هي الجهة أو المؤسسة التي تقوم بتلقي دار الرعاية أو الوحدة التي تعمل بها؟
- من هو المبلغ بالأمر في دار الرعاية أو الوحدة التي تعمل بها؟ (مسماه الوظيفي أو منصبه)
- نظام التواصل المتبعة (قم باختيار جميع الخيارات المنطقة على إجابتك)

( ) هاتف نقال متوفر على مدار الساعة
( ) هاتف متوفر في الوحدة
( ) بريد إلكتروني
( ) مجموعات على تطبيق الواتساب أو الفايبر
( ) أخرى، لطفًا قم بذكرها...
4.3 هل هناك موظف ارتباط في دار الرعاية أو الوحدة الخاصة بك معيّن بجمع ومشاركة أحدث المعلومات؟
(تلك المتعلقة بالنصائح الصحية أو الحالات أو البروتوكولات المتصلة)
نعم/لا/باستثناء متاكداً
لطفاً، قم بذكر منصبك أو مسمأ الوظيفي:

4.4 ما هي وسائلم التواصل المتصلة لمشاركة المعلومات المتصلة بkokid-19 أو أي معلومات طارئة مع كل من:
(قم باختيار جميع الخيارات المتصلة على جانبيك)
- رسالة تصميم/واتساب/فأبر/مكالمات
- الهاتفية/بريد الكتروني/لا يوجد وسائل أخرى، ثم بذكرا أدناه
- المرضى: رسالة تصميم/واتساب/فأبر/مكالمات هاتفية/بريد الكتروني/لا يوجد وسائل أخرى، ثم بذكرا أدناه
- الأقارب والزوار: رسالة تصميم/واتساب/فأبر/مكالمات هاتفية/بريد الكتروني/لا يوجد وسائل أخرى، ثم بذكرا أدناه

4.5 هل لديك قائمة جهات اتصال محدثة لكل من:
- الطاقم، سواء العاملين في دار الرعاية أو الوحدة أو العاملين لصالحها (العلامات الطبية أو الإدارية أو طواقم التنظيف)
الإجابة:
نعم، يوجد سجل ورقى/نعم، يوجد سجل الكتروني/لا/أخرى...
- المرضى الذين حضروا إلى دار الرعاية أو الوحدة:
نعم، يوجد سجل ورقى/نعم، يوجد سجل الكتروني/لا/أخرى
- الأقارب الذين قاموا بزيارة دار الرعاية أو الوحدة:
نعم، يوجد سجل ورقى/نعم، يوجد سجل الكتروني/لا/أخرى
- المرضى الذين تمت زياراتهم في المجتمع:
نعم، يوجد سجل ورقي/نعم، يوجد سجل الكتروني/لا/آخر

4.6 هل لديك نظام لجمع المعلومات لكل من:

- أعراض المرضى:

نعم، يوجد سجل ورقي/نعم، يوجد سجل الكتروني/لا/آخر

- نتائج المرضى:

نعم، يوجد سجل ورقي/نعم، يوجد سجل الكتروني/لا/آخر

- العلاجات المعطاة:

نعم، يوجد سجل ورقي/نعم، يوجد سجل الكتروني/لا/آخر

- تواريخ مكوث المرضى:

نعم، يوجد سجل ورقي/نعم، يوجد سجل الكتروني/لا/آخر

- تواريخ زيارة الأقارب:

نعم، يوجد سجل ورقي/نعم، يوجد سجل الكتروني/لا/آخر

(اختياري) هل لديك أي أفكار أو اقتراحات متعلقة بال التواصل والتنسيق؟

5.1 هل لديك قلق أو شكوك فيما يتعلق بتوفر...

5.2...
|                | في المجتمع المحيط | في دار الرعاية أو الوحدة |
|----------------|-------------------|-------------------------|
| الماء           | نعم/لا            | نعم/لا                   |
| الصابون       | نعم/لا            | نعم/لا                   |
| معقمات الأيدي  | نعم/لا            | نعم/لا                   |
| (ب نسبة كحول لا تقل عن 60%) | نعم/لا            | نعم/لا                   |
| الكهرباء       | نعم/لا            | نعم/لا                   |
| موازين الحرارة | نعم/لا            | نعم/لا                   |
| (ب تقنية القياس عن بعد) | نعم/لا            | نعم/لا                   |
| المواد المعقمة لضمان توفير الرعاية الصحية بشكل آمن | نعم/لا            | نعم/لا                   |
| أخرى، لطفاً فم يذكرها | نعم/لا            | نعم/لا                   |

5.2 هل لديك مواد و منشآت كافية للتنخل من النفايات شديدة العدوى؟

- في دار الرعاية: نعم/لا.
- في المجتمع: نعم/لا.

5.3 هل لديك خزينة حديثة من كل من:

- مواد الحماية المتوفرة لكل من الطاقم والمرضى والزوار (مواد النظافة والتغليف أو مواد الوقاية كالكمامات)

(إلا): نعم/لا/لست متأكدًا

- الأدوات والمعدات الطبية الأخرى المتوفرة لرعاية المرضى:

(إلا): نعم/لا/لست متأكدًا

5.4 هل لديك الإمكانية لاستخدام التكنولوجيا كدليل للمواعد ووجهًا لوجه من باب توفير شكل من أشكال الرعاية عن بعد؟

(إلا): نعم/لا.
إذا كانت الإجابة نعم، لطفًا قم بالإجابة عن التالي:
- ما هي التقنية المستخدمة؟ (قم باختيار جميع الخيارات المطبقة على إجابتك): مكالمات هاتفية/مكالمات فيديو/خرى،...
- تطفاً أم تذكرها
- ما هي الخدمات التي يمكن توفيرها عن بعد؟ (كالأعمال النفسية أو الرعاية الروحانية أو الحزن والفجيعة أو الرعاية في الأيام الأخيرة嗤)
- ما هي إيجابيات استخدام التقنيات الافتراضية؟
- ما هي مصاعب استخدام هذه التقنيات؟

إذا كانت الإجابة لا، لطفًا قم بالإجابة عن التالي:
- ما هي المحددات التي تحول دون استخدام هذه التقنيات؟
- كيف يمكن تسهيل استخدام هذه التقنيات؟

5.5 في حالات الطوارئ أو الأغلاقات العام أو الحجر الصحي، هل تعلم كيف ستتمكن دار الرعاية التي تعمل بها من توفير:
(سواء من خلال مخزونات السلطات المحلية أو الوطنية أو من مزودي القطاع الخاص أو جهات النقل العل)
- الأغذية (المرضى المقيمين في المستشفى فقط) نعم/لا
- الأدوية والمواد الطبية الأخرى؟ نعم/لا
- طواقم إضافية (في حال قام إصابة بعض أفراد الطاقم أو قيامهم بالعزل الذاتي) نعم/لا

(اختياري) لطفًا قم بالتوضيح

إذا كانت الإجابة نعم:
5.6 هل لديك آية مواد تثقيفية فيما يتعلق بكوفيد-19؟ نعم/لا
- هل يتم عرض هذه المنشورات في مكان مرن للطاقم والمريض والزوار؟ نعم/لا
- هل هي متوفرة كذلك في المجتمع المحيط؟ نعم/لا
لطفاً قم بتوضيح التالي:

١. ما هي طبيعة المواد التثقيفية لديك؟
٢. كيف حصلت على هذه المواد التثقيفية؟

(اختياري) قم بنذكر أية أفكار أو اقتراحات فيما يتعلق بالموارد.

٦. التأثير على الطاقم

٦.١ هل لاحظت تغيّب بعض أفراد الطاقم بشكل مفاجئ عن العمل دون بيان السبب (بشكل أكثر من المعتاد)؟

نعم/لا/باست متأكدأ

٦.٢ برأيك، ما مدى توتر الطاقم لديك فيما يتعلق بحاجتهم لرعاية أطفالهم من غير الذاهبين إلى المدارس؟ (على مقياس من ١ إلى ١٠، حيث ١ = غير قلق أبداً، ١٠ = قلق بشدة)

٦.٣ برأيك، ما مدى توتر الطاقم لديك فيما يتعلق بحاجتهم لرعاية أقربائهم؟

(على مقياس من ١ إلى ١٠، حيث ١ = غير قلق أبداً، ١٠ = قلق بشدة)

٦.٤ برأيك، ما مدى قلق الطاقم لديك فيما يتعلق بصابتهم أنفسهم؟

(على مقياس من ١ إلى ١٠، حيث ١ = غير قلق أبداً، ١٠ = قلق بشدة)
6.5 ما مدى قلقك بشأن المشكلات المرتبطة على تواصلك مع المجتمع المحيط بك في حال كانت دار الرعاية أو الوحدة التي تعمل بها معروفة بتعاملها مع حالات كوفيد-19 محتملة؟
(على مقياس من 1 إلى 10، حيث 1=غير قلق أبداً، 10=قلق بشدة)
1/2/3/4/5/6/7/8/9/10

(اختياري) قم بذكر أية أفكار أو اقتراحات فيما يتعلق بالآثار المحتملة ل코فيدي-19 عليك وعلى طاقمك

7. إدراك المخاطر

في غضون الأسبوع القادم...

7.1 برأيك، ما مدى فرصة إصابة طاقم دار الرعاية أو وحدة الرعاية التلطيفية بكوفيد-19؟
(على مقياس من 0 إلى 10، حيث 0=ليس هناك خطورة، 10=أقصى خطورة يمكنك تخيلها)
1/2/3/4/5/6/7/8/9/10

7.2 برأيك، ما احتمال إغلاق دار الرعاية أو وحدة الرعاية التلطيفية التي تعمل بها بسبب وجود حالة مصابة فيها؟
(على مقياس من 0 إلى 10، حيث 0=ليس هناك خطورة، 10=أقصى خطورة يمكنك تخيلها)
1/2/3/4/5/6/7/8/9/10

7.3 هل لديك أي مخاوف أمنية فيما يتعلق بك أو بالطاقم؟ نعم/لا
إذا كانت إجابتك نعم، لطفاً قدم التوضيح
(اختياري)

(اختياري) قم بذكر أية أفكار أو اقتراحات فيما يتعلق بأي آثار أخرى محتملة ل코فيدي-19 على طاقمك
8.1 هل لديك أية بروتوكولات للعناية التنظيفية فيما يتعلق بالسيطرة على الأعراض والدعم النفسي ويمكن مشاركتها مع غير الاحتراسيين؟
نعم/لا

إذا كانت الإجابة نعم، هل لديك الإمكانيات لتدريب غير الاحتراسيين على كيفية تطبيق هذه البروتوكولات؟
(اختياري)
ما هي المحددات التي تحول دون مشاركة هذه الخبرات؟
(اختياري)
كيف يمكن تسهيل مشاركة هذه الخبرات؟

8.2 في حال حدوث جائحة كوفيد-19 أو أي مرض معدٍ آخر، هل لديك خطط لنشر الطوارق الثانية خارج المستشفيات؟
-موفرة الرعاية الصحية: نعم/لا/أعلم/غير متوفر
-المتطوعين: نعم/لا/أعلم/غير متوفر
-الموارد (المواد واللوائح): نعم/لا/أعلم/غير متوفر
إذا أجبت بنعم على أي من المذكور أعلاه، هل طفاً قم بتوضيح السياق الذي سيتم نشرها فيه (كالمجتمع أو وحدات العناية الأخرى إلخ)

8.3 هل لديك أية خطط لدعم وحدات الرعاية الصحية الأخرى في تصنيف الحالات في حال حدوث جائحة كوفيد-19؟
نعم/لا
(اختياري) قم بذكر أية تعليقات لديك.
تعليقات إضافية

يرجى، ما هي أبرز التحديات المستقبلية ل코فيد-19 في وحدتك على مدى الشهر أو الشهرين القادمين؟

ما هي أفضل الطرق لمساعدتك على تجاوز هذه التحديات؟

هل تستطيع أن هناك أي معلومات مهمة لم تسأل عنها في هذا الاستبيان؟

ما هي أبرز مخاوفك؟

بما أنك مشترك في أفكاري أو تعليقات:

اختياري:

هل ترغب في تلقي نتائج هذا الاستطلاع عبر البريد الإلكتروني؟

هل ترغب في أن يتم الاتصال بك في المستقبل بشأن فرص البحث أو مناقشة الرعاية التنفيذية؟

إذا كانت الإجابة ينعم على أي مما ورد أعلاه، فيرجى تزويدي بتفاصيل الاتصال (الاسم، المنظمة، البريد الإلكتروني) :

ملاحظة:

سيتم تفريغ نماذج البيانات الشخصية من أجهزتك على الأسئلة و سيسمح فقط لأعضاء معينين من فريق العمل في كلية كينجز في لندن الإطلاع على هذه البيانات.

يرجى الملاحظة أنه في حال موافقتك على مشاركة معلومات التواصل الخاصة بك فإن أجهزتك يمكن أن تكون مجهولة لفريق العمل في كلية كينجز في لندن.

### Appendix III

**COVID-19 Situation in the Responding Services (n = 26):**

#### Description of Cases

| Type of cases reported          | n | % |
|---------------------------------|---|---|
| Confirmed                       | 14| 52|
| Confirmed + suspected           | 3 | 11|
| Confirmed + suspected + probable| 2 | 7 |
| Confirmed + probable            | 1 | 4 |
| Suspected                       | 6 | 22|
| Probable                        | 1 | 4 |

#### Cases reported among

| Cases reported among                  | n | %  |
|---------------------------------------|---|----|
| Patient                              | 8 | 30 |
| Patient + relative + physician + nurse | 4 | 15 |
| Patient + nurse                      | 3 | 11 |
| Patient + relative                   | 2 | 7 |
| Patient + relative + nurse           | 2 | 7 |
| Patient + physician + nurse          | 2 | 7 |
| Patient + physician                  | 1 | 4 |
| Physician                            | 2 | 7 |
| Nurse                                | 2 | 7 |
| Missing                              | 1 | 4 |

#### Location of the cases identified

| Location of the cases identified       | n | %  |
|----------------------------------------|---|----|
| In the service                         | 9 | 33 |
| Another service of the hospital where the palliative care is located | 15 | 56 |
| Both in the service and another service | 2 | 7 |

*a One respondent also specified Other: “Administrative staff”.

*b Two respondents also specified Other: “manager, coordinator”; “cleaning staff, secretary, kitchen staff”.

### Appendix IV

**COVID-19 Situation in the Responding Services (n = 26):**

#### Case Identification and Actions Taken by the Service

| Case identification                                      | n |   |
|----------------------------------------------------------|---|---|
| Phone call                                               | 10|   |
| Hospital dashboard/hospital HIS/infectious diseases teams| 8 |   |
| COVID-19 screening of patients at admission and with symptoms; and of health-care providers | 3 |   |

| Symptoms identified                                      | n |   |
|----------------------------------------------------------|---|---|
| Phone call                                               | 2 |   |
| Hospital dashboard/hospital HIS/infectious diseases teams| 1 |   |
| COVID-19 screening of patients at admission and with symptoms; and of health-care providers | 1 |   |

#### Actions taken

| Actions taken                                           | n |   |
|----------------------------------------------------------|---|---|
| Referral                                                | 14|   |
| Isolation/containment measures                          | 10|   |
| Reporting                                               | 9 |   |
| Communication with staff                                | 6 |   |
| Routine examination                                     | 2 |   |
| Laboratory report                                       | 1 |   |
| Call for support                                        | 1 |   |
| Communication with users                                | 1 |   |
| COVID team managed case                                 | 1 |   |
| Home quarantine (for infected staff and contacts)        | 1 |   |
| Training with staff                                     | 1 |   |
| Contact tracing                                         | 1 |   |
| Testing of all staff                                    | 1 |   |
| Asymptomatic cases were followed up as outpatient       | 1 |   |
| Use of smartphone app to follow-up COVID patients       | 1 |   |
| All cancer hospital entrances were closed except for 1 inpatient and 1 outpatient entrance with triage with symptoms screening | 1 |   |
| All patients and caregivers to wear a mask (offered if do not have one) | 1 |   |
| Informed staff of SOP for COVID protection and case detection | 1 |   |
| Daily update and assessment meeting in the unit          | 1 |   |
| Missing                                                 | 3 |   |

Vol. 61 No. 2 January 2021  MENA's Palliative Care Services Preparedness
### Appendix V

#### Mechanisms in Place to Communicate and Coordinate the Response ($N = 43$)

| Institution/Role | $n$ | %  |
|------------------|-----|----|
| **Receiving information** | | |
| Institutions or person who would inform the hospice/service | | |
| Infection control team | 13 | 30 |
| Ministry of Health (MoH)/provincial health directorate | 7 | 16 |
| Head of hospital and/or department/hospital management/administration | 6 | 14 |
| Medical staff (doctors and/or nurses) | 3 | 7 |
| Laboratory/laboratory review online | 2 | 5 |
| Medical/professional society | 1 | 2 |
| Preventive medicine team | 1 | 2 |
| Emergency service | 1 | 2 |
| Do not know or N/A or missing | 10 | 23 |
| **Person who would be informed in the hospice or service** | | |
| Designated doctor/doctor in chief/medical director/nursing manager | 8 | 19 |
| Head of hospital and/or department/hospital management | 7 | 16 |
| Infection control team | 5 | 12 |
| Medical/clinical chief | 4 | 9 |
| Medical staff (doctors and/or nurses) | 4 | 9 |
| COVID-19 team | 3 | 7 |
| All staff | 2 | 5 |
| Specialist palliative care physician and consultant/consultant in charge of patient | 2 | 5 |
| MoH | 1 | 2 |
| Professor | 1 | 2 |
| Do not know or missing | 10 | 23 |
| **Communication system(s) that will be used to receive information:** | | |
| Mobile phone available 24/7 | 33 | 77 |
| WhatsApp/Viber group | 21 | 49 |
| Telephone (in the service) | 21 | 49 |
| Email | 16 | 37 |
| **Focal point person identified in the service responsible for collecting and sharing up-to-date information** | | |
| Yes | 31 | 72 |
| No | 7 | 16 |
| Unsure | 4 | 9 |
| Missing | 1 | 2 |
| **Sharing information** | | |
| Any communication means in place to share COVID-19 or other urgent information with staff | 41 | 95 |

| Fines for violators                          | 1  |
| Team support                                 | 3  |
| Team work/meeting                            | 1  |
| Psychosocial support                         | 1  |
| More support from service/administration     | 1  |
| Individual behavior                          | 2  |
| Awareness raising                            | 1  |
| Individuals being careful                    | 1  |

### Appendix IX

**Tables Summarizing the Qualitative Analysis of Open-text Questions: Respondents’ Biggest Worries**  
(*N* = 22)

| Topic                                         | n  |
|----------------------------------------------|--|
| Getting infected and transmitting COVID 19   | 11  |
| Getting ill/nosocomial COVID                 | 7  |
| Infecting family and patients                | 4  |
| Impact of COVID on healthcare                | 6  |
| Closing service due to COVID                 | 1  |
| Patient outcome                              | 1  |
| Resources drained for COVID and negative impact on other services including PC | 1 |
| Infection control                            | 4  |
| Asymptomatic transmission                    | 1  |
| Spike in cases that would overwhelm capacity/second | 3  |
| wave/not being able to control the virus     |  |
| Impact of COVID on society                   | 2  |
| The changes after pandemic                   | 1  |
| Related socioeconomic problems and medical problems | 1  |
| Other                                        | 1  |
| To forget                                    | 1  |
### Appendix X

**Tables Summarizing the Qualitative Analysis of Open-text Questions: Limitations to Share Expertise (N = 10)**

| Limitation                                                                 | n  |
|----------------------------------------------------------------------------|----|
| Service overload                                                          | 3  |
| Staff shortage                                                             | 1  |
| Time restraints                                                            | 1  |
| Work pressure                                                              | 1  |
| Training/awareness                                                        | 2  |
| Lack of education of HCP/lack of knowledge of PC role                      | 1  |
| Lack of training                                                           | 1  |
| Lack of integration of PC into oncology                                    | 1  |
| Attitudes of HCP                                                           | 1  |
| Communication problems                                                     | 1  |
| Most of the resources and efforts directed to COVID response              | 1  |
| Limit of consultation because of the use of video conferencing            | 1  |
| Single center experience                                                   | 1  |

### Appendix XI

**Tables Summarizing the Qualitative Analysis of Open-text Questions: Services That Could Be Provided Remotely (N = 33)**

| Service                                                                 | n  |
|------------------------------------------------------------------------|----|
| Nonmedical palliative care                                             | 34 |
| Psychological                                                           | 17 |
| Social                                                                  | 2  |
| Spiritual                                                               | 7  |

| COVID-19 positive consultation/referrals                                | 1  |
### Appendix XII

#### Tables Summarizing the Qualitative Analysis of Open-text Questions: Disadvantages and Advantages of Using Technology for Providing Palliative Care (N = 27)

**Disadvantages of using technology**

- **Resources**
  - Internet connection/accessibility: 4
  - Lack of technology devices for some patients/society: 4
  - Time pressure: 1
- **Trust and cooperation**
  - Cooperation from the patients’ family/relatives hiding information from patients: 2
  - Difficult to build rapport/trust: 2
- **Appropriateness issues**
  - Difficult for elderly patients: 1
  - Difficult for end-of-life care: 1
  - Difficulty or lack of knowledge to use technology: 1
- **Lack of body language when not face-to-face**
  - Communication: 3
- **Difficulty in documenting, medical evaluation or examining patient, and assessing symptoms**
  - Acceptance issues: 2
  - Adaptation: 1
  - Acceptance from society: 1
  - None: 2
  - Other: 3
    - Psychosocial issues: 1
    - Difficulty in reaching individuals: 1
    - Inaccuracy in some appointments and related issues in session program: 1

**Advantages of using technology**

- **Remote care delivery and management**
  - Medical care, pain management: 2
  - Appointment and follow-up: 2
  - Communication between medical care personnel and patients: 2
  - To postpone follow-up: 1
  - Relief and psychological support for patients to face the crisis: 1
- **Mean to control transmission (less risky/enabled to protect ourselves/stay confined at home)**
  - Communication - generic: 2
  - Communication: 1
  - Communication with HCP: 1
- **Other**
  - Support: 2
  - Working well: 2
  - Convenient, easy, practical: 1
  - Direct contact: 1
  - Saves time and effort: 1
  - Missing: 6

---

HCP = health-care provider.
