Supplementary Figure 2. IL-10 enhances the bacterial phagocytosis ability of alveolar macrophages infected with *A. baumannii*. (A, B) Alveolar macrophages from WT and IL-10-deficient mice were seeded at a density of $2 \times 10^4$ cells/well and infected with *A. baumannii* at 1/10 MOI followed by gentamicin treatment 60 min after infection to remove extracellular bacteria. Live bacteria were then counted by plating onto LB agar supplemented with ampicillin (50 μg/ml) at 1 h after infection. Results are expressed as means ± SD. *$P<0.05$*, **$P<0.01$.**
