S4 Fig. Relationship between Pgp activity and AMG 330-induced cytotoxicity.

Relationship between Pgp activity and drug-induced cytotoxicity with AMG 330 at 250 pg/mL (open symbol) and 500 pg/mL (closed symbol) in the presence of T-cells from a single healthy donor at an E:T cell ratio of (A) 1:3, (B) 1:1, and (C) 3:1, determined by flow cytometry after 48 hours.
