Top 20 metatranscriptomic KEGG pathways

A

Carbon metabolism
Ribosome
Biosynthesis of amino acids
Glycolysis / Gluconeogenesis
Methane metabolism
Pyruvate metabolism
Carbon fixation pathways in prokaryotes
Carbon fixation in photosynthetic organisms
Purine metabolism
Pyrimidine metabolism
Citrate cycle (TCA cycle)
Butanoate metabolism
Oxidative phosphorylation
ABC transporters
RNA degradation
Two-component system
Starch and sucrose metabolism
Quorum sensing
HIF-1 signaling pathway
Fructose and mannose metabolism

CPM

B

Significantly different metatranscriptomic KEGG pathways

Xylen degradation
Dioxin degradation
Ubiquinone and other terpenoid-quinone biosynthesis
Focal adhesion
Ascorbate and aldarate metabolism
Synthesis and degradation of ketone bodies
Tryptophan metabolism
Pentose and glucuronate interconversions
Homologous recombination
Valine, leucine and isoleucine degradation
Fatty acid degradation
Tyrosine metabolism
D-Glutamine and D-glutamate metabolism
Selenocompound metabolism
Amino sugar and nucleotide sugar metabolism
Galactose metabolism
Protein export
Biofilm formation - Escherichia coli
Propanoate metabolism
Starch and sucrose metabolism
Glycolysis / Gluconeogenesis
Fructose and mannose metabolism
Butanoate metabolism
Carbon fixation pathways in prokaryotes
Quorum sensing
Pentose phosphate pathway
Oxidative phosphorylation
Pyruvate metabolism
Purine metabolism
Pantothenate and CoA biosynthesis
Carbon metabolism
