Supplemental Online Material for:

Allelochemicals of the phenoxazinone class act at physiologically relevant concentrations

Sascha Venturelli¹*, Sebastian Petersen², Tobias Langenecker², Detlef Weigel², Ulrich M. Lauer¹, Claude Becker²§

Supplemental Figure Legends

Figure S1.
Effects of solvents on growth of A. thaliana seedlings. Root length was measured 7 days after germination on control medium or on medium supplemented with 5µl DMSO and 15µl EtOH, respectively. Per replicate, 12-15 roots were measured. Asterisks indicate the corresponding P-value (two-tailed unpaired Student’s t-test; *=0.01<P<0.05; **=0.001<P<0.01; ns=non-significant).
