Correction to: Translational Psychiatry (2015) 4, e491; doi:10.1038/tp.2014.133; published online 6 January 2015

Following publication of the above article, the authors were informed of an error in one of the figures. In Figure 1, the r and P-values were mixed between Figures 1a and c, and between Figures 1b and d. The corrected Figure 1 is shown below. We thank Dr Guillaume Sescousse for informing us about the error.

![Corrected Figure 1](image_url)

**Figure 1.** Temporal discounting and dopamine function in the ventral striatum. Spearman nonparametric correlations between temporal discounting rate ($k$) and dopamine release ($\text{Vstr dBP}_{\text{ND}}$; positive values indicate dopamine release) in pathological gamblers (a) and controls (b). Correlations between the baseline ventral striatum $D2/D3$ availability ($\text{Vstr BP}_{\text{ND}}$) and $k$ in pathological gamblers (c) and controls (d). Solid circles represent PG subjects. Open circles represent healthy volunteers. BP$_{\text{ND}}$, non-displaceable binding potential; Vstr, ventral striatum; PG, pathological gambling.
