This article has been corrected: The correct figure 5A cell line T98G is given below:

The authors declare that these corrections do not change the results or conclusions of this paper.

Figure 5: Suppression of Sirt3 augments the activation of apoptosis and increases the sensitivity of tumor cells to hypoxia. (A) LN229 and T98G cells were transfected with a non-targeting RNA or a siRNA targeting Sirt3, followed by hypoxia treatment for 48h. Apoptosis was determined by flow cytometric analyses of Annexin staining.
