## Supporting Information 3: Draft TPP round 1

As used in feedback round 1

| Characteristic                          | Minimal                                                                 | Optimal                                                                 | Notes                                                                 |
|----------------------------------------|-------------------------------------------------------------------------|-------------------------------------------------------------------------|----------------------------------------------------------------------|
| **Scope of the app**                   |                                                                         |                                                                         |                                                                      |
| 1. Intended use                        | The app, after photographing each RDT, will suggest an interpretation of the test to the user, who can either accept that or choose an alternate interpretation. The app will transmit these test data as well as patient data entered by the user and contextual data such as the phone’s location to the health program. |                                                                         |                                                                      |
| 2. Target use setting                  | Community outreach (Level 0) and primary care (Level 1)¹                 |                                                                         |                                                                      |
| 3. Target users of the app             | Community health workers with minimal training and any health worker with a similar or superior training level |                                                                         |                                                                      |
| 4. Target population                   | Total population presenting for care at relevant settings               |                                                                         |                                                                      |
| 5. Training requirements               | Less than ½ hour for existing users of RDTs and mobile devices          |                                                                         |                                                                      |
| 6. Ease of use                         | Less than 30 seconds of additional user time per test                   | No additional user time                                                | Compared to a workflow using paper forms for record-keeping          |
| 7. Required system components for the app to be used | • A mobile device that is already available to the user or the organization  
• An RDT |                                                                         | This app will be compatible with existing RDTs rather than requiring special versions or packages of RDTs |
| 8. Compatible mobile devices          | Android mobile devices (smartphones and tablets) that include a camera | Same plus iOS                                                           |                                                                      |
| 9. Compatible RDT types                | Qualitative lateral flow tests                                          | Same plus Semi-quantitative (threshold) lateral flow tests              | These semi-quantitative tests involve comparison of the intensity of a test line to a reference |

¹ Ghani AC, Burgess DH, Reynolds A, Rousseau C. Expanding the role of diagnostic and prognostic tools for infectious diseases in resource-poor settings. Nature 2015;528:550-52
| Characteristic | Minimal | Optimal | Notes |
|----------------|---------|---------|-------|
| **Functional requirements** | | | |
| 10. RDT instructions given by the app | None | Equivalent to Quick Reference Instructions or a job aid | |
| 11. Quality control | - Check of the RDT’s internal control(s)  
- Check of sufficient capability of the mobile device’s camera | Same plus  
- Analysis of background to check sufficient washing of the sample by the buffer  
- Check of elapsed time to reading of result  
- Check of expiration by date | Failures of these checks will result in warnings to the user and in the record |
| 12. Result determination | The app suggests the result and requires the user to confirm or override | | |
| 13. Diagnostic data reported | - Brand and type of test (possibly by photographing the test and its packaging)  
- Outcome of quality controls  
- Result as selected by user  
- Result as calculated by the app  
- Photograph used to calculate result, without patient-identifiable information | Same plus  
- Lot number and expiration date of the test (possibly by photographing the test and its packaging)  
- RDT instruction version  
- Other relevant diagnostic data as inputted by the user | By removing patient-identifiable information, which might be written on the RDT, from the photograph of the RDT, the photograph can more easily be managed and used for non-clinical purposes like quality control |
| Characteristic                        | Minimal                                                                 | Optimal                                                                 | Notes                                                                 |
|--------------------------------------|-------------------------------------------------------------------------|-------------------------------------------------------------------------|-----------------------------------------------------------------------|
| 14. Patient/case data reported       | • Patient identifier: name, ID number, and/or contact info               | Same plus                                                               | • Other case information such as symptoms and vital signs             |
|                                      |                                                                         |                                                                         | • Additional user information such as age and address                 |
| 15. Contextual data reported         | • User identification                                                  |                                                                         |                                                                       |
|                                      | • Location of test (if enabled by the health program)                   |                                                                         |                                                                       |
|                                      | • Time and date of test                                                |                                                                         |                                                                       |
|                                      | • Model of mobile device                                               |                                                                         |                                                                       |
| 16. Methods for user data entry      | • Typing                                                               | Same plus                                                               | The user can choose from these methods when entering the data types   |
|                                      | • Scanning barcodes                                                   |                                                                         | listed above                                                          |
|                                      |                                                                         | • Photographing printed text (optical character recognition (OCR))     |                                                                       |
| 17. User access rights               | Provides access to specific data and app features for users with     |                                                                       | Roles may include data manager (facility supervisor)                  |
|                                      | different roles                                                        |                                                                         | or RDT user (health care worker)                                       |

**Operational requirements**

| 18. Lighting of the operating        | Any setting in which the user can see well enough to run the test.     | Example settings:                                                       |                                                                       |
| environment                           |                                                                         | • dim indoors without artificial lighting                               |
|                                      |                                                                         | • window-less indoors with fluorescent lighting                         |
|                                      |                                                                         | • mixed lighting                                                         |
|                                      |                                                                         | • outdoors in direct sun                                                |
|                                      |                                                                         | • outdoors in dappled, moving shadows from a tree                        |
|                                      |                                                                         | • outdoors in shade with indirect sunlight off a red wall               |

Example settings:
- Dim indoors without artificial lighting
- Window-less indoors with fluorescent lighting
- Mixed lighting
- Outdoors in direct sun
- Outdoors in dappled, moving shadows from a tree
- Outdoors in shade with indirect sunlight off a red wall
## Data characteristics

| Characteristic                          | Minimal                                                                 | Optimal                                                                 | Notes                                                                 |
|----------------------------------------|-------------------------------------------------------------------------|-------------------------------------------------------------------------|----------------------------------------------------------------------|
| 19. Data ownership                     | All data collected via the app in the implementation setting is owned by the app owner (i.e. the healthcare program or research establishment) |                                                                         | For connections to systems such as LISs, DHIS2, EHRs, national registries and surveillance systems |
| 20. Data flow                          | De-identified output data can be exchanged with different authorities with authorization by local authorities |                                                                         |                                                                      |
| 21. System access (public API)         | Publicly available application programming interface (API) for data access protected by authentication and authorization. Technical standards are adhered to. | Same plus HIE/HL7 standards are adhered to. |                                                                      |
| 22. Handling of intermittent connections | The user shall be able to perform tests offline, in which case the app shall transmit that data when back online | Same plus The app shall synchronize automatically (without user action) in the background when back online |                                                                      |
| 23. Security and privacy               | The app operates under secure connectivity, which meets data protection regulations of individual countries to avoid loss and corruption of sensitive data, and mitigate cyber-attacks, whether data are at rest or in transmission. Conforms to national privacy laws. | Encourages GDPR (should no national data security policies exist) to ensure a system that: • preserves data integrity • identifies and mitigates risks • provides relevant parties clear security processes | Implementation is expected to include processes such as: • Two-factor authentication • De-identified data • Data encryption |
| 24. Data storage                       | Any data stored in a server/cloud shall be accessible to high-level country authority on a web interface | Any data stored in a server/cloud shall be stored only within that health program’s country |                                                                      |
### TPP: RDT-reading mobile app

| Characteristic                                      | Minimal                                                                 | Optimal                                                                 | Notes                                                                 |
|-----------------------------------------------------|-------------------------------------------------------------------------|-------------------------------------------------------------------------|----------------------------------------------------------------------|
| **Performance requirements**                        |                                                                         |                                                                         |                                                                      |
| 25. Accuracy of results as calculated by the app (for non-clinical purposes) | > 95% concordance with a trained target user                            | > 98% concordance with a trained target user                            |                                                                      |
| **Pricing and accessibility**                        |                                                                         |                                                                         |                                                                      |
| 26. Pricing within the public sector in LMICs       | The pricing structure should be adapted to LMICs (including open-source and open-access solutions), and strategies for further cost reductions should be in place | Details to be established in a Global Access agreement. For applicable markets, see [https://www.finddx.org/find-negotiated-product-pricing/](https://www.finddx.org/find-negotiated-product-pricing/) |                                                                      |
