# Data Sharing Statement

| Item | Question                                                                 | Authors’ Response (place “-” if not applicable) |
|------|--------------------------------------------------------------------------|-------------------------------------------------|
| 1    | Would you like to share data collected for your study to others?         | We are willing to share raw (anonymized) data from our study, if requested. However, since the original data are derived from electronical medical records, they should be handled carefully considering privacy issues. |
| 2    | If not, would you like to share the reason for your decision?            | -                                               |
| 3    | What data in particular will be shared?                                  | Time of follow up, time of (progression free) survival, patient characteristics, responses to treatment. |
| 4    | Any other documents will be share? Such as study protocol, statistical analysis plan, informed consent form, clinical study report, analytic code. | -                                               |
| 5    | When will data availability begin?                                       | Data may be requested after publication of this study. |
| 6    | When will data availability end?                                         | -                                               |
| 7    | To whom will you share the data?                                        | Other researchers that are, for example, studying long term follow up on a larger (combined) cohort of patients. |
| 8    | For what type of analysis or purpose?                                   | Long term follow up on a larger (combined) cohort of patients. Or other shared studies. |
| 9    | How or where can the data/documents be obtained?                         | Data may be requested by contacting the corresponding author. |
| 10   | Any other restrictions?                                                 | Privacy issues regarding the nature of the data should always be carefully considered. If needed, ethical committees should review study plans and/or sharing of data. |
