1. Introduction

The town of Multan, one of Asia's oldest subcontinent cities, which is regarded the "Santa Zone," is located in Central Pakistan about 562 km from the capital, Islamabad. Hindu legends mention Multan in the battle with the Hindu Epic, as the capital of Kingdom of Trigarto and the dynasty of Katoch. In 1947, Multan became a member of Pakistan and of the old buildings Multan dated to the 17th and 18th Century after the partition of the Indian Subcontinent. (Day 2012) (Day 2012) (Dawn 2012) (Dawn 2012) Starting with the parents who always took him/her to another place to get Islamic knowledge to be a village, city or city. In culture in particular, food and shelter are traumatic in their lives. Beggars can be seen as a group of people who rely on the livelihood of their lives. Any beggars are found at a younger age. Four of them are 10 years of age, and in some places you can find excavators in their own homes up to the age of five years. Under one (teacher) control, there are two to hundred beggars, and sometimes more than 100, the teacher cannot handle them.
appropriately as he is intended. Due to the dirty garments they wear and the place they sleep and feed, drinking is also a contaminated body of these bags which can easily provide for some diseases. (Extract from French).

**An Honor for a Special Person**

Islamabad, Jan 4: Dr Aamir Hanif Raja, who has completed his PhD, is the first visually blind teacher in history. The Organization for Islamic Cooperation (OIC) and European Union are compared in its research paper (EU). Dr. Aamir, 39, was a member of Kirpa, a rural region of the federal capital and facing all the obstacles, completed his studies. (Dawn 2013) (Dawn 2013) He was chosen as an instructor in Asghar Mall College, RaWalpindi, and he now teaches as an adjunct lecturer. He also travelled to United Kingdom when talking to Dawn that he finished his PhD from Punjab Uni. He said. He said. "I earned a 2006 Higher Education Commission scholarship in merit and received PhD financing," he said. "In Great Britain, blind people had plenty of services. I researched at a research centre specifically designed for visually disabled persons," he said. "I had to face a lot of critique when I began studying, but I kept on going and finished my doctorate. I conclude that people begin to give him value and reverence in our society when an individual shows himself to be. The same happens to me, I get appreciation from other people at least now," he said. "I have ensured each student at my college that I am his good friend and am teaching them in a nice atmosphere whereby my topic results are more than 90%," (Dawn 2013) (Dawn 2013) We are currently working similarly, however, to compare bagging methods for easy division of massive datasets. In districts, Multan started a new counter-Beggary operation. Recently, TMA officers started to seize all male beggars and handed over tens of beggars to police officers. More than 200 beggars fought at the Faisalabad police station on Monday and hurled stones and bricks. In all districts we need an organised camp, and the police must be involved," said Sadiq official of TMA in Multan. TMA officials in Sialkot, Faisalabad, and Multan have already carried out a brief survey showing that most beggars are located on street crossings, on sites and in shopping areas in both districts. (Forum 2011) These citizens do not have institutions or detox centres, so they go back to the streets," said an official. Recently, over 300 professional beggars including women and excavators were joined by the Social Welfare Department of Faisalabad but were permitted to go to the markets a couple of days later. "This is because laws and bagger refurbishing facilities allow us to intervene but it is much tougher to do the same thing for adults," said Welfare Department official Rahmat Javed. "They have the power to give bagger to the Child Protection Office (CPB). In the efforts made at different phases of programme implementation, and most importantly, evaluating the severe and increasing disability and how individuals with disabilities can be included in development process, the seriousness of a community in the treatment of persons with disabilities reflects the efforts made.

**Procedure of the Study**

This research is qualitative in nature. The case studies were taken to collect data. The logics behind this was the less population of the disable married bagger. The universe of this study was the Multan city and surrounding areas.

**Significance of the Study**

The present study deals with the issues of Social and marital life of special: people who are Bagger in Multan. In Pakistan majority of the population living below the poverty line Special people as a bagger are there in Pakistan at risk for behind their limited access to basic
facilities, such as health, education, and recreation. However, has found that the greater the exposure to stressful events, the greater the probability of deviant behavior when special people as a beggared are faced with later stresses.

**Limitations of the Study**

The present research has its own limitation in terms of resources, scope and time frame. Following are the limitations for the present research.

- The study was limited to Multan city.
- Married beggars.
- Beggars are the area of disabilities i.e. mental retarded, physical handicap, and visual impaired were included in this study.

2. **Review of Relevant Literature**

Scientific analysis is not an independent hermits' operation that does not recognise other results. It is instead a collection of several researchers who share their findings and who seek expertise as a culture. While certain experiments may be particularly significant and individual studies may become renowned, a new study project is only a small part of the overall mechanism for building information on the basis of previous researchers’ studies to compare replicates or critique them for weakness.

John, J. J. In colleges and universities there are no services in favour of higher education for special persons. (2003) The business is small. The requirements of vocational training programmes are not entirely satisfied for parents and special individuals. What makes people with disabilities wish to beg! (Groce: unpublished interview, 2010) The question of whether many individuals with handicaps decide to beg in this broader literature is lost. Where religious instructions thank people for their gift, begging may be less frowned upon and beggars are seen to contribute to the well-being of society. (Affairs and Austrian Development Agency, 2006) Women’s empowerment was based on economic and financial empowerment but now its concept has been wider which involves Psychological, intra home relational, Socio cultural, legal and political aspects (Majoor, Manders and Femconsult, 2009). Empowerment of women is a mechanism that improves women's ability to make decisions about desired events and outcomes. (Hebrew, 2013). The mechanism to create and improve the capacity of individuals in economic, social and political aspects for structuring their own lives and their communities (Affairs and Austrian Development Agency, 2006). Gender equality The definition refers to the rights of all humans, such that all the wishes of men and women are given equal consideration.(MacMillan, 1850) claimed that a letter of supplication concerns a wealthy or organised individual, normally written by a poor person or by a person who claims to be poor, begging for money or assistance. The letter of supplication was a letter. In the novelist Charles Dickens' post, the begging-letter writer mentions descriptions of the many begging letters he had received over the years and the ruses used by their authors for the purpose of earning funds from the beneficiaries.

The disabilities in Pakistan are classified into physical disabilities, hearing deficiency and mental impairment (Akhtar, 2013). Disabilities of disability are classified as disabilities. In addition, these are graded as mild, moderate, and severe/deep. Since there are many known causes of disability, the precise causes of disability are unclear. Disability is likely due to the effects of different conditions.
3. Research Methodology

Methodology: This research is qualitative by nature and the case studies was taken to collect that. The logics behind this was the less population of the disable married bagger. The universe of this study was the Multan city and surrounding areas. (the main logics behind this was the easily access to the Multan population and better understanding about the culture also customs of Multan especially the language and related information regarding their home and activities of the disable married beggars or their excitement with society.

Population of the study: The target population of this research thesis was the married disabled married baggers. Sample of the study: The sample size was ten cases from the Multan city three male and seven female so necessary changes were brought according the research ethics/ and methods.

Sampling Technique: Purposive and convenient sampling was used for sample selection. Purposive and convenient sampling was logically appropriate for this research. The purposive sampling was necessary to identify the bagger and is he/she was married or not because the study was the explanation of the disable person’s marital problems and other they are associated with them.

Tool of the study: This present study of was the qualitative research involves the use of qualitative data, such as Case studies, In-depth interview with the help of interview guide. So the tool for data collection was interview guide and this is appropriate for this research because some disable married bagger were unable to read and write, so this was the suitable for this research.

Validations of the tool: Tool of this study was validated with the help of expert’s opinions.

Data collection: The data was collected from the Multan city and surrounding from the mentally disable, visual impair, and other disable persons they were involved in bagging and were disable.

Data Analysis: The critical analysis of each case was written by the researcher. The data analysis was used to analyze the data for the present research (case studies). The cause studies were critically analyzed by using the critical descriptive analysis.

4. Data Analysis

The data analysis and the tables were interpreted with the respect of all data results and the all data was explaining about the positions of different responses. The critical analysis was written at the end of every case study.

Case Study No.1

Demographic Data:

| Name          | Kalsoom Bibi   |
|---------------|----------------|
| Age           | 18 Year        |
| Order of Birth| 1st            |
| Marital Status| Married        |
Family Background:

Respondents belong to a lower class family of Khan Multan Kalsoom Bibi was an illiterate woman. She has two brothers and two sisters. Her family monthly income was 3100-4000. Her husband occupation was laborer.

Detail of Case: Respondent name was Kalsoom Bibi. Her age was 18 years. She was a married. Her caste was Rajpoot. She was living near the Multan basically she was belong to village but due to baggers she was living in city area close by BZU. She was a patient of Psychiatric disoriented i.e. Depression. The behavior of her in-laws was nonassertive. They torture her in different forms and she cries.

Analysis of the case: Researcher observes during interview that respondent was in tension, depression. And this was the cause of her as baggers. The behavior of society was hating. She has not children due to the ill health and disability.

Case Study No.2

Demographic Data:

| Name       | Maqsooda Banu  |
|------------|----------------|
| Age        | 35 Year        |
| Order of Birth | 2nd           |
| Marital Status | Married    |
| Education  | Primary        |
| Profession | baggers        |
| Family Type | Nuclear Family |
| Caste      | Sheikh Ansari  |
| Family Income | 4100-5000    |
| Mental illness | Anxiety, Depression |
| Causes     | Mental disability (Mood dis order) |
| City/Village | Multan        |

Family Background: Respondents belong to a lower class family of Multan. Her education level was primary. She has three brothers and two sisters. Her family monthly income was ranging 4100-5000. Her husband occupation was laborer.

Detail of Case: Respondent name was Maqsooda Banu. Her age was 35 years. She was a married. Her caste was Sheikh Ansari. She lives in urban areas of Multan. She was a patient of Anxiety and Depression and mood disorder. Her husband beats him daily and burns her hand due to this she was facing mood disorder. In depression she cries, gets out from home and has odd behaviors even with friends and family. At last her husband got out from home and she was worried about children.
Analysis of the case: In this case researcher analyses that the behavior of her husband was very cruel with her. The idea of having a home encompasses living in a place that afford physical and psychological safety and security, then a woman experiencing violence in her home was in a very real sense, homeless.

Case Study No.3

Demographic Data:

| Name          | Tabasum Fatima |
|---------------|----------------|
| Age           | 26 years       |
| Order of Birth| 1st            |

5. Summery Finding Conclusion & Suggestions

Summary

Disable women’s bagger knowledge is specific, unlike difficulties to enjoying rights because of gender discrimination. We must redefine each recognized human right, (women’s rights) and profile ‘new’ human privileges from the viewpoint of disable women’s needs. In Islamic point of view, equality between the genders is the prevalent theme in the Quran Pak. Pakistan is also Islamic country but it is still facing the problem of disable oppression especially the women’s due to male governing society and the violation on the base of disability, poverty.
Lack of awareness, child marriages rape and forced beggary. This study has been conducted in the field of special education, an important and modern science to explain the social life of women’s and male particularly the special person’s in this research unfolding the social problems and disparities facing by the disable and violation of disable rights, and the participation in the field of development.

The main objectives of the study were.

1. To determine causes of begging with disability.
2. To determine remedial services for disable bagger.
3. To assess the problems of the bagger with disability.

This study was conducted in in the domain of qualitative research 10 case studies was conducted. Also was unpacked that in what ways the social and customary laws adversely affect the women’s civil rights as a social being. In the other hand this research was explaining anti-women’s rights and anti-women’s custom’s that are prevalent in Multan an interview guide (case studies) was used as a tool for data collection and researcher personally conduct in-dept. interviewed from the respondents. This study also suggested that there is need to remove the all types of violence against the women’s and government must should implement all laws to protect the women’s like strongly implement the act, property act, and women’s protection bill and anti -customary laws ,solved related problems of women’s like the Poverty, educate for all.

Finding

1) All the bagger was compelled by the family due to reach his/ her disability.
2) The married special bagger children’s were facing problems regarding to their future / education.
3) The family members set him / her on the bank of roads for the purpose of bagging because they are disabling and cannot afford the family life so the parents of Special girls were found worry about the future of their children.
4) Most of the bagger has had their residence place but they are living on road along with were in trouble due to financial and physical disparities.
5) The disable people were bagger because they don’t have any other fields to do work and develop their social life.
6) All special persons were willing about their children education but they want to socialize them as a bagger because there were not found any other alternative.
7) The families of disable women’s were facing problem’s according to marital life and adjustment in society.
8) The disable bagger feels this is our right to beg because we don’t have any other source of income.

Conclusion

The disable persons are facing problems regarding their financial position’s, children’s future, marital social life, health, force bagging and the limited information about his /her rights so the family and other members set him or her at roads for bagging some family forcibly compel him/ her for bagging. The BISP programe is also fail because they don’t have CNIC for this need a separate policy at uc level to generate funding for such bagger’s and work for behavior change communication , government empower them through skill and education.
