**Toll-like receptor-2 is essential for the development of palmitate-induced insulin resistance in myotubes.**

Joseph J. Senn

After careful review of the files, Dr. Senn agrees that there was an error in the MyD88 mass Western blot in Fig. 2A. It appears that it is in fact the same scan as that used for the p38 mass blot in Fig. 1B. This error was due to the similarity in molecular weight of these two molecules, which led to the inadvertent placement of the same scan when composing the figures. The corrected Fig. 2 is shown below.

**AMP-activated protein kinase contributes to UV- and H2O2-induced apoptosis in human skin keratinocytes.**

Cong Cao, Shan Lu, Rebecca Kivlin, Brittany Wallin, Elizabeth Card, Andrew Bagdasarian, Tyrone Tamakloe, Wen-ming Chu, Kun-liang Guan, and Yinsheng Wan

This article has been withdrawn at the request of the authors. Reason: To demonstrate that the activation of AMPK is mediated by EGFR activation, the authors included data in Fig. 2 (A, G, and H) that had been used in a previous publication. After publication of the above article, the authors were made aware of this and are therefore withdrawing this paper. Despite these errors, the authors stand by the reproducibility of the experimental data and the conclusion.
