National Cancer Institute. Aggressive NK-Cell Leukemia. NCI Thesaurus. Code C8647.

A rare, highly aggressive, Epstein-Barr virus-associated leukemia, also known as aggressive NK-cell leukemia/lymphoma; it may represent the leukemic counterpart of nasal type extranodal NK/T-cell lymphomas. It affects primarily teenagers and young adults. It is characterized by the systemic proliferation of NK cells in the peripheral blood, bone marrow, liver, and spleen.
