Here, we present the draft genome sequence for the violacein-producing \textit{Janthinobacterium} sp. CG23\_2 isolated from an Antarctic supraglacial stream. The genome is ~7.85 Mb, with a G+\text{C} content of 63.5\%. The genome includes 7,247 candidate protein coding genes, which may provide insight into UV tolerance mechanisms.

\textbf{Acknowledgments}  
Funding for this research came from the National Science Foundation (OPP-0838970 and 1141978), and the Department of Microbiology at Montana State University. H.J.S. was supported by the NASA Earth and Space Science Fellowship (NESSF) program. Logistical support was provided by Raytheon Polar Services and Petroleum Helicopters Incorporated.

Any opinions, findings, and conclusions or recommendations expressed in this do not necessarily reflect the views of the National Science Foundation.
FUNDING INFORMATION

NASA Earth and Space Science Fellowship provided funding to Heidi J. Smith. National Science Foundation (NSF) provided funding to Christine M. Foreman under grant number OPP-0838970. National Science Foundation (NSF) provided funding to Christine M. Foreman under grant number ANT-1141978.
