Abstract—China has entered a new era with the new normal of economic development which has changed from a "speed priority" to the "high quality development". The higher education development stage in China has gradually entered the mass higher education level. It has carried out vigorous supply-side reforms in the field of higher education under this special background. Therefore, this paper has certain significance in the in-depth study of private college teachers in developed areas of China based on the perspective of happiness. This article takes the 187 teachers from a college in Guangdong Province as the survey object, and uses the questionnaire survey method to investigate based on SPSS23.0 statistical analysis software. The final research results show that the overall sense of happiness of private college teachers in developed areas is still relatively low. The work pressure of private college teachers is mainly from the highest proportion of family income, followed by the school assessment, job promotion, and the lowest factor is from student and interpersonal relationship. Among the most important factors, the influence of material conditions takes the biggest place, followed by physical and mental health, personal value, family life, interpersonal relationship, and the smallest is from social status and leisure life.

Keywords—supply side reform in education; developed areas; the sense of Happiness of Teachers in Private Colleges

I. INTRODUCTION

The emergence of new era items such as Big Data, Internet of Things, Blockchain, and Artificial Intelligence, it means that the current process of industrial modernization in China has entered a stage of rapid development. Since 1999, the enrollment of higher education in China has entered the period of expansion. In the past 20 years, higher education has experienced the expansion of undergraduates, postgraduate and even doctoral students. However, with the increase of college students and postgraduate students of different levels, the number of college teachers has also entered a rapid growth. The definition of happiness of private college teachers refers to the private college teachers who can fully and freely exert their potential to meet the actual spiritual and material needs of private college teachers and promote the realization of their life value. Therefore, it's important and necessary to deeply study the private college teachers in developed areas of China based on the perspective of teachers' happiness.

II. RESEARCH METHODS

A. Basic Situation of the Informants

Through a random survey of 187 private college teachers, there were 58 male private teachers take 31.01% and 129 female private teachers with a 68.99% rate. IV. CONCLUSION AND SUGGESTIONS

A. Conclusion

Finally, through the summary of the above analysis results, the author can further summarize the following main conclusions. At present, the happiness of teachers in private universities in developed regions is still relatively low. Most of the private college teachers have low real living areas which is lower 90 square meters in real life, the work pressure of private college teachers is mainly from the highest proportion of family income, followed by school assessment, job promotion, and the lowest is from student and interpersonal relationships. Among the most important factors affecting the happiness of private college teachers, the author finds that the influence from material conditions is the biggest, followed by physical and mental health and personal value, family life, interpersonal relationship, and the smallest is from social status and leisure life. In the developed areas, the private college teachers have relatively low level of professional respect, and their satisfaction with their family life is generally low. In terms of satisfaction with their professional titles, most college teachers have low satisfaction and sleep. In terms of the situation, it is found through analysis that the current sleep quality of private college teachers is relatively poor overall, and most teachers often stay up late. Among the degree of conformity with who like to get along with students, there are a certain proportion of college teachers and can't get along well with students.

B. Suggestions

The government and relevant departments should further increase the special support for private colleges, and effectively improve the current wage income level of private college teachers through various means and multiple channels.

Teachers in private universities should be given more support and help in the housing need, and constantly improve relevant supporting measures to improve the actual needs of their housing.

Although the current evaluation of university titles is further decentralized, the number of high-ranking titles in private universities is relatively low. Relevant authorities should rationally optimize the evaluation system of teachers' titles in private universities according to local conditions, and further promote the deepening reform of various relevant evaluation systems.

All relevant departments of the university should further strengthen the attention to the family life of the full-time teachers of the school, and achieve more humane care, and provide timely help and support to some full-time teachers whose family condition is not good.

Private college teachers should position themselves in their own aspects. In the process of education and teaching, we should further handle the harmonious and friendly relationship between teachers and students, and strive to be a teacher and model for students.

Private college teachers should recognize the importance of physical health, enhance their awareness of self-protection, try to stay up less or not at all and regularly conduct health checkups on their physical condition.
