Table 4. (Supplemental material) Diagnostic performance of 3D stress perfusion with CMR in octogenarians

|                      | < 80 years | ≥ 80 years | p value |
|----------------------|------------|------------|---------|
|                      | n = 390    | n = 26     |         |
| FFR                  |            |            |         |
| Sensitivity, % (95% CI) | 87 (82-91) | 89 (65-99) | 0.853   |
| Specificity, % (95% CI) | 81 (74-86) | 75 (35-97) | 0.706   |
| Positive predictive value, % (95% CI) | 83 (79-87) | 89 (70-96) | 0.539   |
| Negative predictive value, % (95% CI) | 85 (79-89) | 75 (43-92) | 0.441   |

FFR: fractional flow reserve; CI: confidence interval.

Figure 3. (Supplemental material)

ROC curve of octogenarians aged ≥80 years for the prediction of pathological FFR using 3D stress perfusion CMR and MIB.

MIB: myocardial ischemic burden; ROC: Receiver operating characteristic; AUC: area under the curve.
