SUPREMUM DISTRIBUTION OF BESSEL PROCESS OF DRIFTING
BROWNIAN MOTION

Andrzej Pyć

Tomasz Żak

Abstract: Let us assume that $(B^{(1)}_t, B^{(2)}_t, B^{(3)}_t + \mu t)$ is a three-dimensional Brownian motion with drift $\mu$, starting at the origin. Then $X_t = \|(B^{(1)}_t, B^{(2)}_t, B^{(3)}_t + \mu t)\|$, its distance from the starting point, is a diffusion with many applications. We investigate the supremum of $(X_t)$, give an infinite-series formula for its distribution function and an exact estimate of the density of this distribution in terms of elementary functions.
