ADDITIONS AND CORRECTIONS

 ΔNp63α protein triggers epithelial-mesenchymal transition and confers stem cell properties in normal human keratinocytes.
Ju-Eun Oh, Reuben H. Kim, Ki-Hyuk Shin, No-Hee Park, and Mo K. Kang

Due to inadvertent error, incorrect loading controls were shown in the original Fig. 6B (page 38764) and Fig. 8E (page 38765). These figures were corrected as shown below. Both figures demonstrate equal loading of proteins, and therefore, this correction does not change the interpretation of data or conclusions.

Authors are urged to introduce these corrections into any reprints they distribute. Secondary (abstract) services are urged to carry notice of these corrections as prominently as they carried the original abstracts.
