Cover of the Month

Yasuaki TOKUDOME, Department of Materials Science, Graduate School of Engineering, Osaka Prefecture University.

“Aqueous synthesis of metal hydroxides with controllable nano/macro architectures”
Vol. 125, No. 8, p. 597–602

Various nano/macro structures self-assembled from metal hydroxide nanoclusters: Co-continuous macroporous structure (left); mesoporous structure (upper right); inverse opal structure (lower right).
