Reviewer's report

**Title:** Comprehensive profiling of DNA methylation in colorectal cancer reveals subgroups with distinct clinicopathological and molecular features

**Version:** 3  **Date:** 31 March 2010

**Reviewer:** Beatriz Carvalho

**Reviewer's report:**

Ang and collaborators revised the manuscript according to all reviewers’s comments. The practical application of the results obtained in this study is still not too obvious, it remains a very descriptive study. However, it is a well performed study clearly written that contributes to our knowledge on genome wide methylation in colorectal cancer.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

I declare that I have no competing interests.
