Abstract
In chemical graph theory, a topological descriptor is a numerical quantity that is based on the chemical structure of underlying chemical compound. Topological indices play an important role in chemical graph theory especially in the quantitative structure-property relationship (QSPR) and quantitative structure-activity relationship (QSAR). In this paper, we present explicit formulae for some basic mathematical operations for the second hyper-Zagreb index of complement graph containing the join $G_1 + G_2$, tensor product $G_1 \otimes G_2$, Cartesian product $G_1 \times G_2$, composition $G_1 \circ G_2$, strong product $G_1 \ast G_2$, disjunction $G_1 \lor G_2$ and symmetric difference $G_1 \oplus G_2$. Moreover, we studied the second hyper-Zagreb index for some certain important physicochemical structures such as molecular complement graphs of V-Phenylenic Nanotube $VPHX[q,p]$, V-Phenylenic Nanotorus $VPHY[m,n]$ and Titania Nanotubes $TiO_2$.

1 Introduction

A graph can be recognized by a numeric value which represent the whole graph. Topological indices are numerical quantity which are used to correlate the physico-chemical properties of a molecule with its structure such as boiling point, stability, strain energy etc. There are a wide range of topological descriptors which based on degree-based, distance-based, eigenvalue-based, matching-based and mixed-based. The topological indices which based on degree-based play a vital in chemical sciences and computing these topological indices is one of the recent areas of research in chemical graph theory. In our study, we have computed the degree-based topological indices of some graph operations and some nanostructure. All graphs in this paper are finite and simple, let $G$ be a finite simple graph on $V(G) = n$, vertices and $E(G) = m$, edges, the degree of a vertex $v$ is the number of edges incident to $v$, denoted by $\delta_G(v)$. The first and second Zagreb indices have been introduced by Gutman and Trinajstić in 1972 [1]. They are respectively defined as:

$$M_1(G) = \sum_{v \in V(G)} \delta_G^2(v) = \sum_{u \in E(G)} [\delta_G(u) + \delta_G(v)],$$

$$M_2(G) = \sum_{u \in E(G)} \delta_G(u) \delta_G(v).$$

The first and second Zagreb coindices have been introduced by A.R. Ashrafi, T. Došlić, and A. Hamzeh in 2010 [2]. They are respectively defined as:

$$\Pi_1(G) = \sum_{u \in E(G)} [\delta_G^2(u) + \delta_G^2(v)], \quad \Pi_2(G) = \sum_{u \in E(G)} \delta_G(u) \delta_G(v),$$

In 2013, Shirdel et al. [3] introduced degree-based of Zagreb indices named Hyper-Zagreb index which is defined as:

$$HM(G) = \sum_{u \in E(G)} (\delta_G(u) + \delta_G(v))^2,$$

In 2016, M. Veylaki et al. [4] introduced degree-based of Zagreb coindex named Hyper-Zagreb coindex which is defined as:

$$\Pi M(G) = \sum_{u \in E(G)} (\delta_G^2(u) + \delta_G^2(v)),$$

Furtula and Gutman in (2015) introduced forgotten index (F-index) [5], which defined as:

$$F(G) = \sum_{u \in E(G)} (\delta_G^2(u) + \delta_G^2(v)),$$

Furtula et al. in (2015) defined forgotten coindex (F-coindex)[6] as the following:

$$\mathcal{F}(G) = \sum_{u \in E(G)} (\delta_G^2(u) + \delta_G^2(v)),$$

Ranjini et al. [7] defined the redefined first, second and third Zagreb indices for a graph $G$ and these are manifested as:

$$ReZG_1(G) = \sum_{u \in E(G)} \frac{\delta(u) + \delta(v)}{\delta(u)\delta(v)}, \quad ReZG_2(G) = \sum_{u \in E(G)} \frac{\delta(u)\delta(v)}{\delta(u) + \delta(v)}.$$
In 2020, Alameri et al. \cite{8,9} presented new degree-based Zagreb index and coindex denoted by (Y-index, Y-coindex) and defined respectively as:

\[
Y(G) = \sum_{u \in V(G)} \delta^4_G(u) = \sum_{u \in E(G)} [\delta^2_G(u) + \delta^2_G(v)],
\]

\[
\overline{Y}(G) = \sum_{v \in E(G)} [\delta^2_G(u) + \delta^2_G(v)],
\]

In 2016, Wei Gao et al. \cite{10} defined the second Hyper-Zagreb index of a graph \(G\), which is defined as:

\[
HM_2(G) = \sum_{u \in E(G)} (\delta_G(u) \delta_G(v))^2,
\]

Therefore, Wei Gao et al. \cite{10} in (2016) computed the second Hyper-Zagreb index \(HM_2(G)\) of Carbon Nanocones CNC\(_n\). M. Farahani et al. \cite{11} studied the second Hyper-Zagreb index of Molecular graphs V-Phenylenic Nanotubes and V-Phenylenic Nanotorus. A. Modabish et al. \cite{12} in (2021) computed the second Hyper-Zagreb index of some special graph and graph operation. Here we continue this line of research by exploring the behavior of the second Hyper-Zagreb index under several important operations such as the tensor product \(G_1 \otimes G_2\), join \(G_1 \cup G_2\) and \(G_1 \oplus G_2\), strong product \(G_1 * G_2\), Cartesian product \(G_1 \times G_2\), composition \(G_1 \circ G_2\), disjunction \(G_1 \vee G_2\) and symmetric difference \(G_1 \oplus G_2\). The results are applied on some molecular complement graphs such as of V-Phenylenic Nanotube \(VPHX[8, p]\), V-Phenylenic Nanotorus \(VPHY[m, n]\) and Titania Nanotubes \(TiO_2\). Any unexplained terminology is standard, typically as in \cite{10,11,13,14,15,16,17,18}.

2 Preliminaries

**Definition 2.1.** \cite{19} The complement graph of a graph \(G\) denoted by \(\overline{G}\), is a graph on the same set of vertices \(V(G)\) in which two vertices \(u\) and \(v\) are adjacent, i.e., connected by an edge \(uv\), if and only if they are not adjacent in \(G\). Hence, \(uv \in E(\overline{G}) \iff uv \notin E(G)\). Obviously \(E(\overline{G}) \cup E(\overline{G}) = E(K_n)\), and \(m = |E(\overline{G})| = (\binom{n}{2}) - m\), the degree of a vertex \(u\) in \(\overline{G}\), is the number of edges incident to \(u\), denoted by \(\overline{\delta}(u) = (n - 1) - \delta_G(u)\).

**Theorem 2.1.** \cite{11,19} The first and second Zagreb and Hyper-Zagreb indices of the V-Phenylenic Nanotubes \(VPHX[q, p]\) (\(q, p \in \mathbb{N} - \{1\}\) ) (Fig. 1) are given by,

\[
M_1(VPHX[q, p]) = 54pq - 10q,
\]

\[
M_2(VPHX[q, p]) = 81pq + 3q,
\]

\[
HM(VPHX[q, p]) = 4q(81p - 20),
\]

\[
HM_2(VPHX[q, p]) = 9q(81p - 29).
\]

**Theorem 2.2.** \cite{11,19} The Zagreb and Hyper-Zagreb indices of the V-Phenylenic Nanotorus \(VPHY[m, n]\) (\(\forall m, n \in \mathbb{N} - \{1\}\) ) (Fig. 3) are given by,

\[
M_1(VPHY[m, n]) = 54mn,
\]

\[
M_2(VPHY[m, n]) = 81mn,
\]

\[
HM(VPHY[m, n]) = 324mn,
\]

\[
HM_2(VPHY[m, n]) = 729mn.
\]
3 Discussion and Main Results

In this section, we study the second Hyper-Zagreb index of various complement graph operations and compute $HM_2$ for some certain important Nano-Structures such as molecular complement graphs of V-Phenylenic Nanotube $VPHX[q, p]$, V-Phenylenic Nanotorus $VPHY[m, n]$ and Titania Nanotubes $TiO_2$.

3.1 Second Hyper-Zagreb index of complement graph binary operations

**Theorem 3.1.** Let $G$ be a graph with $n$ vertices and $m$ edges. Then,

$$HM_2(G) = m(n-1)^4 - 2(n-1)^3 M_1(G) + (n-1)^2 F(G) + 4(n-1)^2 M_2(G) - 2(n-1) M_1(G) F(G) + HM_2(G).$$

**Proof.** By definition of the second Hyper-Zagreb index, we have

$$HM_2(G) = \sum_{uv \in E(G)} [\delta_G(u)\delta_G(v)]^2$$

$$= \sum_{uv \in E(G)} [(n-1)^2 - 2(n-1)\delta_G(u) + \delta_G^2(u)][(n-1)^2 - 2(n-1)\delta_G(v) + \delta_G^2(v)]$$

$$= \sum_{uv \in E(G)} [(n-1)^4 - 2(n-1)^3 \delta_G(v) + (n-1)^2 \delta_G^2(v) - 2(n-1)^3 \delta_G(u) + \delta_G^2(u)]$$

$$+ 4(n-1)^2 \delta_G(u)\delta_G(v) - 2(n-1)\delta_G(u)\delta_G^2(v) + (n-1)^2 \delta_G^2(u) - 2(n-1)\delta_G^2(u)\delta_G(v) + \delta_G^2(u)\delta_G^2(v)$$

$$= (n-1)^4 \sum_{u \in V(G)} 1 - 2(n-1)^3 \sum_{u \in V(G)} [\delta_G(v) + \delta_G(u)]$$

$$+ (n-1)^2 \sum_{u \in V(G)} [\delta_G^2(v) + \delta_G^2(u)] + 4(n-1)^2 \sum_{u \in V(G)} \delta_G(u)\delta_G(v) - 2(n-1)\sum_{u \in V(G)} \delta_G(u)\delta_G^2(v) + \delta_G^2(u)\delta_G^2(v).$$
**Theorem 3.2.** The second Hyper-Zagreb index of complement $G_1 \otimes G_2$ is given by:

$$HM_2(G_1 \otimes G_2) = 2m_1m_2(n_1n_2 - 1)^3 - 2(n_1n_2 - 1)^3M_1(G_1)M_1(G_2)$$

$$+ (n_1n_2 - 1)^3F(G_1)F(G_2) + 8(n_1n_2 - 1)^2M_2(G_1)M_2(G_2)$$

$$- 2(n_1n_2 - 1)M_1(G_1)M_1(G_2)F(G_1)F(G_2) + 2HM_2(G_1)HM_2(G_2).$$

**Proof.** By (Theorem 3.1) we have

$$HM_2(G) = m(n - 1)^3 - 2(n - 1)^3M_1(G) + (n - 1)^2F(G) + 4(n - 1)^2M_2(G)$$

And $M_1(G_1 \otimes G_2) = M_1(G_1)M_1(G_2)$, $M_2(G_1 \otimes G_2) = 2M_2(G_1)M_2(G_2)$ given in [22]. $F(G_1 \otimes G_2) = F(G_1)F(G_2)$ given in [23]. $HM_2(G_1 \otimes G_2) = 2HM_2(G_1)HM_2(G_2)$ given in [12]. and since $|E(G_1 \otimes G_2)| = 2m_1m_2$, $\text{deg}(G_1 \otimes G_2) = n_1n_2$. Then,

$$HM_2(G_1 \otimes G_2) = |E(G_1 \otimes G_2)|(|V(G_1 \otimes G_2)| - 1)^3 - 2(|V(G_1 \otimes G_2)| - 1)^3M_1(G_1 \otimes G_2)$$

$$+ (|V(G_1 \otimes G_2)| - 1)^3F(G_1 \otimes G_2) + 4(|V(G_1 \otimes G_2)| - 1)^2M_2(G_1 \otimes G_2)$$

$$- 2(|V(G_1 \otimes G_2)| - 1)M_1(G_1 \otimes G_2)F(G_1)F(G_2) + HM_2(G_1 \otimes G_2)$$

$$= 2m_1m_2(n_1n_2 - 1)^3 - 2(n_1n_2 - 1)^3M_1(G_1)M_1(G_2)$$

$$+ (n_1n_2 - 1)^3F(G_1)F(G_2) + 8(n_1n_2 - 1)^2M_2(G_1)M_2(G_2)$$

$$- 2(n_1n_2 - 1)M_1(G_1)M_1(G_2)F(G_1)F(G_2) + 2HM_2(G_1)HM_2(G_2).$$

**Definition 3.2.** [20],[21] The join $G_1 + G_2$ of two graphs $G_1$ and $G_2$ is a graph with vertex set $V(G_1 + G_2) = V(G_1) \cup V(G_2)$ and edge set $E(G_1) \cup E(G_2) \cup \{uv|u \in V(G_1), v \in V(G_2)\}$, such that $|V(G_1 + G_2)| = n_1 + n_2$, $|E(G_1 + G_2)| = m_1 + m_2 + n_1n_2$ and $\deg_{G_1 + G_2}(a) = \begin{cases} \deg_{G_1}(a) + n_2 & \text{if } a \in V(G_1) \\ \deg_{G_2}(a) + n_1 & \text{if } a \in V(G_2) \end{cases}.$

**Theorem 3.3.** [25] The second Zagreb index of $G_1 + G_2$ is given by:

$$M_2(G_1 + G_2) = M_2(G_1) + M_2(G_2) + n_2M_1(G_1) + n_1M_1(G_2) + n_1^2m_1 + n_2^2m_2$$

$$+ 4m_1m_2 + 2m_1n_1n_2 + 2m_2n_1n_2 + n_1^2n_2^2.$$

**Theorem 3.4.** The second Hyper-Zagreb index of $G_1 + G_2$ is given by:

$$HM_2(G_1 + G_2) = n_1^2F(G_1) + n_2^2F(G_2) + 4n_1^2M_2(G_1) + 4n_2^2M_2(G_2)$$

$$+ 2n_1M_1(G_1) + 2n_2M_1(G_2) + n_1^2m_1 + n_2^2m_2$$

$$+ [4m_1m_2 + n_1^2n_2]M_1(G_1) + [4m_2m_1 + n_2^2n_1]M_1(G_2)$$

$$+ 4n_1^2[m_1 + m_2] + 16n_1n_2m_1m_2 + M_1(G_1)M_1(G_2)$$

$$+ 2n_1M_1(G_1)F(G_1) + 2n_2M_1(G_2)F(G_2) + HM_2(G_1) + HM_2(G_2).$$
Proof. By definitions of the second Hyper-Zagreb index, we have

\[
HM_2(G_1 + G_2) = \sum_{u \in E(G_1 + G_2)} [\delta_{G_1}^2(u)\delta_{G_2}^2(v)]
\]

\[
= \sum_{u \in E(G_1)} [\delta_{G_1}^2(u)\delta_{G_2}^2(v)] + \sum_{u \in E(G_2)} [\delta_{G_1}^2(u)\delta_{G_2}^2(v)]
\]

\[
+ \sum_{u \in V(G_1)} \sum_{v \in V(G_2)} [\delta_{G_1}^2(u)\delta_{G_2}^2(v)]
\]

\[
= \sum_{u \in E(G_1)} [(\delta_{G_1}^2(u) + 2n_2\delta_{G_1}(u) + n_2^2)(\delta_{G_2}^2(v) + 2n_2\delta_{G_2}(v) + n_2^2)]
\]

\[
+ \sum_{u \in E(G_2)} [(\delta_{G_2}^2(u) + 2n_1\delta_{G_2}(u) + n_1^2)(\delta_{G_2}^2(v) + 2n_1\delta_{G_2}(v) + n_1^2)]
\]

\[
+ \sum_{u \in V(G_1)} \sum_{v \in V(G_2)} [(\delta_{G_1}^2(u) + 2n_2\delta_{G_1}(u) + n_2^2)(\delta_{G_2}^2(v) + 2n_1\delta_{G_2}(v) + n_1^2)]
\]

\[
= \sum_{u \in E(G_1)} \delta_{G_1}^2(u)\delta_{G_2}^2(v) + 2n_2\delta_{G_1}(u)\delta_{G_2}(v) + n_2^2\delta_{G_1}(u) + 2n_2\delta_{G_1}(u)\delta_{G_1}^2(v)
\]

\[
+ 4n_2^2\delta_{G_1}(u)\delta_{G_1}(v) + 2n_1^3\delta_{G_1}(u) + n_1^3\delta_{G_1}(v) + 2n_1n_2\delta_{G_1}(v) + n_2^2
\]

\[
+ \sum_{u \in E(G_2)} \delta_{G_2}^2(u)\delta_{G_2}^2(v) + 2n_1\delta_{G_2}(u)\delta_{G_2}(v) + n_1^2\delta_{G_2}(u) + 2n_1\delta_{G_2}(u)\delta_{G_2}^2(v)
\]

\[
+ 4n_1^2\delta_{G_2}(u)\delta_{G_2}(v) + 2n_1^3\delta_{G_2}(u) + n_1^3\delta_{G_2}(v) + 2n_1n_2\delta_{G_2}(v) + n_1^2
\]

\[
+ \sum_{u \in V(G_1)} \sum_{v \in V(G_2)} \delta_{G_1}^2(u)\delta_{G_2}^2(v) + 2n_1\delta_{G_2}(u)\delta_{G_2}(v) + n_1^2\delta_{G_2}(u) + 2n_1\delta_{G_2}(u)\delta_{G_2}^2(v)
\]

\[
+ 4n_1^2\delta_{G_2}(u)\delta_{G_2}(v) + 2n_1^3\delta_{G_2}(u) + n_1^3\delta_{G_2}(v) + 2n_1n_2\delta_{G_2}(v) + n_1^2n_2^2
\]

Step 1

\[
\sum_{u \in E(G_1)} [...] = \sum_{u \in E(G_1)} [\delta_{G_1}^2(u)\delta_{G_1}^2(v)] + 2n_2 \sum_{u \in E(G_1)} [\delta_{G_1}^2(u)\delta_{G_2}(v) + \delta_{G_1}(u)\delta_{G_1}^2(v)]
\]

\[
+ n_2^2 \sum_{u \in E(G_1)} [\delta_{G_1}^2(u) + \delta_{G_1}^2(v)] + 4n_2 \sum_{u \in E(G_1)} [\delta_{G_1}(u)\delta_{G_1}(v)]
\]

\[
+ 2n_2 \sum_{u \in E(G_1)} [\delta_{G_1}(u) + \delta_{G_1}(v)] + n_2^3 \sum_{u \in E(G_1)} (1)
\]

\[
= HM_2(G_1) + 2n_2 M_1(G_1) F(G_1) + n_2^2 F(G_1) + 4n_2^2 M_2(G_1) + 2n_2^3 M_1(G_1) + n_2^3 m_1.
\]
Step 2

\[
\sum_{uv \in E(G_2)} [...] = \sum_{uv \in E(G_2)} [\delta^2_{G_2}(u)\delta^2_{G_2}(v)] + 2n_1 \sum_{uv \in E(G_2)} [\delta^2_{G_2}(u)\delta_{G_2}(v) + \delta_{G_2}(u)\delta^2_{G_2}(v)] + n_2^4 \sum_{uv \in E(G_2)} [\delta_{G_2}(u)\delta_{G_2}(v)] + 4n_2^4 \sum_{uv \in E(G_2)} [\delta_{G_2}(u)\delta_{G_2}(v)] + 2n_1^4 \sum_{uv \in E(G_2)} [\delta_{G_2}(u)\delta_{G_2}(v)] + n_1^4 \sum_{uv \in E(G_2)} (1)
\]

\[
= HM_2(G_2) + 2n_1M_1(G_2)F(G_2) + n_2^2F(G_2) + 4n_2^2M_2(G_2) + 2n_1^2M_1(G_2) + n_1^4m_2.
\]

Step 3

\[
\sum_{u \in V(G_1)} \sum_{v \in V(G_2)} [...] = \sum_{u \in V(G_1)} \sum_{v \in V(G_2)} [\delta^2_{G_1}(u)\delta^2_{G_2}(v)] + 2n_1 \sum_{u \in V(G_1)} \sum_{v \in V(G_2)} [\delta^2_{G_1}(u)\delta_{G_2}(v)] + n_2^4 \sum_{u \in V(G_1)} \sum_{v \in V(G_2)} [\delta_{G_1}(u)\delta^2_{G_2}(v)] + 4n_1n_2 \sum_{u \in V(G_1)} \sum_{v \in V(G_2)} [\delta_{G_1}(u)\delta_{G_2}(v)] + 2n_1n_2 \sum_{u \in V(G_1)} \sum_{v \in V(G_2)} \delta_{G_1}(u) + n_2^2 \sum_{u \in V(G_1)} \sum_{v \in V(G_2)} \delta_{G_2}(v) + n_2^2n_2 \sum_{u \in V(G_1)} \sum_{v \in V(G_2)} \delta_{G_2}(v) (1)
\]

\[
= M_1(G_1)M_1(G_2) + 4n_1m_2M_1(G_1) + n_1^4n_2M_1(G_1) + 4n_2m_1M_2(G_2) + 16n_1n_2m_1m_2 + 4n_1n_2^2n_2^2 + n_1^4n_2^2M_1(G_2) + 4n_2^2n_2^2 + n_1^4n_2^2.
\]

It is easy to see that the summation of step 1, step 2 and step 3 complete the proof. \(\blacksquare\)

Theorem 3.5. The second Hyper-Zagreb index of complement \(G_1 + G_2\) is given by:

\[

$E_6(VPHY[m, n]) = E_9 = \{ e = uv \in E(VPHY[m, n]): \delta(u) = 3, \delta(v) = 3 \}$

Proof. By using (Theorem 3.1) we have

$$HM_2(VPHY[m, n]) = |E(VPHY[m, n])|(|V(VPHY[m, n])| - 1)^4 - 2(|V(VPHY[m, n])| - 1)^3M_1(VPHY[m, n]) + |V(VPHY[m, n])|^2F(VPHY[m, n]) + 4(|V(VPHY[m, n])| - 1)^2M_2(VPHY[m, n]) - 2(|V(VPHY[m, n])| - 1)M_1(VPHY[m, n])F(VPHY[m, n]) + HM_2(VPHY[m, n]).$$

And $M_1(VPHY[m, n]) = 54mn$, $M_2(VPHY[m, n]) = 81mn$, and $HM_2(VPHY[m, n]) = 729mn$, given in (Theorem 2.2) above. And since $F(VPHY[m, n]) = 162mn$ given in [26] and the partitions of the vertex set and edge set of $(VPHY[m, n])$ nanotubes are given in (Table 2) [11],[19].

$$\sum |V(VPHY[m, n])| = 6mn, \quad \sum |E(VPHY[m, n])| = 9mn$$

Which are complete the proof.

3.4 Second Hyper-Zagreb index of complement Titania nanotubes and nanotorus

Titania nanotubes are considered one of the most studied compounds in materials science. Owing to some outstanding properties, it is used, for instance, in photocatalysis, dye-sensitized solar cells,
and biomedical devices [28], [29], [30]. In the following subsection, we study the second Hyper-Zagreb of molecular complement graph Titania nanotubes and molecular complement graph of nanotorus.

**Corollary 3.13.** The second Hyper-Zagreb index of complement $TiO_2[n, m]$ nanotube (Fig. 4) is given by

$$HM_2(TiO_2[n, m]) = [10mn + 8n][6mn + 6n - 1]^4$$

$$- 2(76mn + 48n)(6mn + 6n - 1)^3 + (840mn + 408n)(6mn + 6n - 1)^2$$

$$+ 1930mn + 362n - 2[6mn + 6n - 1](76mn + 48n)(320mn + 160n).$$

![Fig. 4. The molecular graph of $TiO_2[n, m]$ nanotube](image)

**Proof.** By using (Theorem 3.1) we have

$$HM_2(TiO_2[n, m]) = |E(TiO_2)|(|V(TiO_2)| - 1)^4 - 2(|V(TiO_2)| - 1)^3M_1(TiO_2)$$

$$+ |V(TiO_2)| - 1)^2F(TiO_2) + 4(|V(TiO_2)| - 1)^2M_2(TiO_2)$$

$$- 2|V(TiO_2)| - 1)M_1(TiO_2)F(TiO_2) + HM_2(TiO_2).$$

And since $M_1(TiO_2[n, m]) = 76mn + 48n$, $M_2(TiO_2[n, m]) = 130mn + 62n$. $F(TiO_2[n, m]) = 320mn + 160n$ given in [28], [29]. $HM_2(TiO_2[n, m]) = 1930mn + 362n$ given in [30]. and the partitions of the vertex set and edge set $V(TiO_2)$, $E(TiO_2)$, of $TiO_2[n, m]$ nanotubes are given in (Tables 3, 4), respectively. We have $\sum |V(TiO_2[n, m])| = 6mn + 6n$, $\sum |E(TiO_2[n, m])| = 10mn + 8n$.

| Vertex partition | $v_2$ | $v_3$ | $v_4$ | $v_5$ | Cardinality |
|------------------|-------|-------|-------|-------|--------------|
|                  | 2mn + 4n | 2mn | 2n | 2mn |               |

| Edge partition  | $E_6 = E_8^*$ | $E_7 = E_{10}^* \cup E_{12}^*$ | $E_8 = E_{15}^*$ | $E_{12}^*$ | $E_{10}^*$ | Cardinality |
|-----------------|---------------|------------------------|---------------|-------------|-------------|--------------|
|                  | 6n            | 4mn + 4n               | 6mn - 2n     | 4mn + 2n    | 2n          |              |
\( H M_2(TiO_2[n, m]) = \sum |E(TiO_2[n, m])| \left( \sum |V(TiO_2[n, m])| - 1 \right)^4 
- 2M_1(TiO_2) \left( \sum |V(TiO_2[n, m])| - 1 \right)^3 
+ F(TiO_2) \left( \sum |V(TiO_2[n, m])| - 1 \right)^2 
+ 4M_2(TiO_2) \left( \sum |V(TiO_2[n, m])| - 1 \right)^2 
- 2 \left( \sum |V(TiO_2[n, m])| - 1 \right) M_1(TiO_2) F(TiO_2) + H M_2(TiO_2) 
= |E^*_8| + |E^*_9[\{6mn + 6n - 1\}]|^4 
+ 2(76mn + 48n)(6mn + 6n - 1)^3 + (320mn + 160n)(6mn + 6n - 1)^2 
+ 4(130mn + 62n)(6mn + 6n - 1)^2 + 1930mn + 362n 
- 2(6mn + 6n - 1)(76mn + 48n)(320mn + 160n) 
= [10mn + 8n][6mn + 6n - 1]^4 
- 2(76mn + 48n)(6mn + 6n - 1)^3 + (840mn + 408n)(6mn + 6n - 1)^2 
+ 1930mn + 362n - 2(6mn + 6n - 1)(76mn + 48n)(320mn + 160n). 
\]

**Corollary 3.14.** [32] Let \( T = T[p, q] \) be the molecular graph of a nanotorus such that \( |V(T)| = pq, \ |E(T)| = \frac{2}{3}pq \) (Fig. 5). Then,

a. \( ReZG_3(T[p, q]) = 81pq \).
b. \( H M_2(T[p, q]) = \frac{243}{2}pq \).
c. \( H M_2(P_n \times T) = pq \left( \frac{2837}{2}n - 1831 \right) \).

![Molecular graph of a nanotorus](image)

**Corollary 3.15.** Let \( T = T[p, q] \) be the molecular graph of a nanotorus such that \( |V(T)| = pq, \ |E(T)| = \frac{2}{3}pq \) (Fig. 5). Then,

a. \( H M_2(T[p, q]) = \frac{3}{2}pq(pq - 1)^4 - 18pq(pq - 1)^3 + 81pq(pq - 1)^2 - 486p^2q^2(pq - 1) + \frac{243}{2}pq \).
b. \( H M_2(P_n \times T) = pq \left( \frac{5}{2}n^2pq - npq - \frac{105}{2}n + 37 \right) + (npq - 1)^2[375n - 370] 
- 2pq(25n - 18)(npq - 1)(125n - 122) + \frac{2837}{2}n - 1831 \).
Proof. To prove (a), by using (Theorem 3.1) we have

\[ HM_2(T[p, q]) = |E(T[p, q])| |(V(T[p, q])| - 1)^4 - 2|(V(T[p, q])| - 1)^3 M_1(T[p, q]) + (|V(T[p, q])| - 1)^2 F(T[p, q]) + 4(|V(T[p, q])| - 1)^2 M_2(T[p, q]) - 2|V(T[p, q])| - 1) M_1(T[p, q]) F(T[p, q]) + HM_2(T[p, q]). \]

And since \( M_1(T) = 9pq \), \( M_2(T) = \frac{27}{2} pq \) given in [15]. \( F(T) = 27pq \) given in [31]. \( HM(T[p, q]) = 54pq \) given in [24], and \( HM_2(T[p, q]) = \frac{27}{2} pq \) given in (Corollary 3.14 (b)) above. Then,

\[ HM_2(T[p, q]) = |E(T[p, q])| |(V(T[p, q])| - 1)^4 - 2|(V(T[p, q])| - 1)^3 M_1(T[p, q]) + (|V(T[p, q])| - 1)^2 F(T[p, q]) + 4(|V(T[p, q])| - 1)^2 M_2(T[p, q]) - 2|V(T[p, q])| - 1) M_1(T[p, q]) F(T[p, q]) + HM_2(T[p, q]) \]

To prove (b), since \( M_1(P_n \times T) = pq(25n - 18) \), \( M_2(P_n \times T) = \frac{1}{2} pq(125n - 124) \), given in [23], and since

\[ F(P_n \times T) = |V(T)| F(P_n) + |V(P_n)| F(T) + 6|E(T)| M_1(P_n) + 6|E(P_n)| M_1(T) = 2pq(4n - 7) + 27pq + 18pq(2n - 3) + 54pq(n - 1) = pq[125n - 122]. \]

By (Corollary 3.14 (c)) \( HM_2(P_n \times T) = pq[\frac{2837}{2} n - 1831] \) and since \( |E(P_n \times T)| = (n - 1)pq + \frac{1}{2} npq = pq(\frac{5}{2} n - 1) \), \( |V(P_n \times T)| = npq \), and by using (Theorem 3.1) we get

\[ HM_2(P_n \times T) = |E(P_n \times T)| |(V(P_n \times T)| - 1)^4 - 2|(V(P_n \times T)| - 1)^3 M_1(P_n \times T) + (|V(P_n \times T)| - 1)^2 F(P_n \times T) + 4(|V(P_n \times T)| - 1)^2 M_2(P_n \times T) - 2|V(P_n \times T)| - 1) M_1(P_n \times T) F(P_n \times T) + HM_2(P_n \times T) \]

\[ = pq\left(\frac{5}{2} n - 1\right)(npq - 1)^4 - 2pq(npq - 1)^3(25n - 18) + pq[125n - 122](npq - 1)^2 + 2pq(npq - 1)^2(125n - 124) - 2p^2 q^2(25n - 18)(npq - 1)(125n - 122) + pq[\frac{2837}{2} n - 1831] \]

\[ = pq\left[(npq - 1)^4\left(\frac{5}{2} n^2 - npq - \frac{105}{2} n + 37\right) + (npq - 1)^2[375n - 370] - 2p^2 q^2(25n - 18)(npq - 1)(125n - 122) + \frac{2837}{2} n - 1831\right]. \]

\[ \square \]

4 Conclusions

This article has presented explicit formulas of some basic mathematical operation for the second Hyper Zagreb index of complement graph operations. Moreover, we computed the second hyper-Zagreb index for some certain important physicochemical structures such as molecular complement graphs of V-Phenylenic Nanotube \( VPHX[q, p] \), V-Phenylenic Nanotorus \( VPHY[m, n] \) and Titania Nanotubes \( TiO_2 \).
