A Proposed Training Program for Developing Reciprocal Teaching Skills For Secondary School English Language Teachers

A research derived from a master thesis at the Department of Curricula and Teaching Methods. College of Education, King Khalid University

Ahmed Awad Ali Asiri
Educational supervisor at the Ministry of Education, Kingdom of Saudi Arabia

Dr. Ahmed Atif Alshehri
Associate professor at the Department of Curricula and Teaching Methods, College of Education, King Khalid University

Abstract:

This research aims to prepare a proposed training program for developing reciprocal teaching skills for secondary school English language teachers. To achieve this goal, the researcher prepared a list of reciprocal teaching skills. In the light of this, a questionnaire was prepared to identify the training needs of English language teachers at secondary school and their level of the 315 English language teachers in the secondary school which affiliate to the department of education in Asseer Region. The researcher used the descriptive approach in preparing the research tool. The results of research resulted in a list of training needs in the light of reciprocal teaching skills for secondary school English language teachers and were generally high level of need. Accordingly, a proposed training program was prepared to develop the reciprocal teaching skills of secondary school English language teachers.

Keywords: Training Program, Reciprocal Teaching Skills, English Language Teachers.

Introduction:

There is no doubt that the world, today, witnesses many changes in various areas of life, one of the most important of these areas is "public education institutions"; since education is a process that
constantly evolving through knowledge and technological progress in research and studies, and this is what make education keep pace with these changes, and face these challenges which stand in front of progress, by improving and developing the educational process.

It is not possible to talk about educational reform in isolation from teacher reform, because the future teacher accounts for a large area in this issue, as the teacher is one of the basic components of the future system. The educational curricula, whatever quality, lose value at the hands of an unskilled teacher. Consequently, "teacher development" has the attention of educational institutions at all levels; due to the importance role the teacher plays in the educational process, and because the teacher represents the main element in any educational system, and the active power in the educational system. Hence, this issue became a basic input for educational reform (Al-Mady, 2013).

Some recent trends have emerged in the field of teacher preparation, which emphasizes the need to keep up with these changes, and pursue scientific, educational and technical developments, and perhaps the most important of these trends is that which emphasizes the preparation of the teacher and his qualification in accordance with professional standards and requirements, which help to perform his roles and carry out his duties at the fullest extent, in order to keep pace "age developments" and dealing with future challenges (Al-Mady, 2013).

Studies such as Al-Jeaid (2008) and Qadi (2014) also called for "teacher development" in order to keep
pace with the demands of the modern era, considering that the teacher will remain an essential element in the educational process, and the educational system will not be able to face challenges of contemporary globalization without giving the teacher the priority of care and attention, in all stages "selection, preparation, and training", with the aim of raising teacher's level, and helping him achieve the necessary interaction and adaptation to contemporary developments.

(Al-Sayegh, 2002) study found that the teacher preparation and training programs in the Kingdom of Saudi Arabia suffer from shortcomings and weaknesses, and they need to be developed and improved to fit the modern era and multiculturalism.

The issue of teacher development in general, and the development of the English language teacher in particular, received the attention of the educational policy in the Kingdom in an attempt to bridge the gap between performance and skill, and work to develop teacher's skills continuously during service through training programs. The studies have also emphasized the importance of developing English language teacher, and determining the teaching performance level, and meeting his training needs, one of these studies is "Al-harby study" (2012).

Consequently, there is an ongoing need to raise the effectiveness of teaching and the efficiency of learning situations for English language teachers in this rapidly developing world in the cognitive and technological aspects, which requires that teaching development processes has to go hand in hand with developments in the field of educational research (Ministry of Education, 2003).
On search for a modern teaching method, the reciprocal teaching strategy emerges as one of the metacognitive strategies that depends on learning based the principle of positivity and interaction; so that the learner engages in a number of activities through which he acquires information, concepts and skills in a targeted and functional manner, which leads to the achievement of a meaningful learning (Sulaiman, 2010).

Reciprocal teaching strategy is considered one of the modern teaching strategies, and an educational thought based on designing educational situations in the form of co-operative groups interacting with the teacher and with each other, under the supervision and guidance of the teacher leading the learner to become a thinker and interacting with problemsolving (Bayoumi, 2011).

Reciprocal teaching strategy is, also, one of the important strategies in teaching the English language, because it improves the linguistic skills of learners and improves the level of speaking and listening. It also develops deep reading comprehension, captures meaning from a written text, and enhances the level of discussion among learners. Studies that have focused on the use of reciprocal teaching in teaching English language include (Shahhosseini, 2011) and (Sun, L, 2010) that showed the effectiveness of this strategy in teaching English language.

Based on the importance of reciprocal teaching strategy in teaching the English language, and based on the role of training needs in determining the required knowledge and skills to provide the trainees with, this research sought to design a training program for developing reciprocal teaching skills for secondary school English language teachers.
Problem of the research:

The feeling of the problem stems from the researcher's work as a teacher of English at secondary school and his teaching of English language courses for a period of more than five years, where the researcher noticed that there are deficiencies in the training programs for English language teachers dealing with modern teaching strategies.

This was confirmed by previous studies that indicated the importance of developing an English teacher and training him in modern teaching methods in order to be in line with modern-day variables such as Al-harby Study (2012) which addresses identifying the training needs of English language teachers in the field of foreign language teaching, and (Kusoumoto, 2009) that revealed the training needs of English language teachers for modern teaching methods.

The importance of the strategy is also clarified through the researcher's use at secondary school, showing its effectiveness and relevance in teaching English to students and its positive results. The studies also confirmed the importance of reciprocal teaching such as Al-Yasiri (2013), which aimed to examine the effect of reciprocal teaching strategy in developing language skill.

In light of what has mentioned above, and what previous studies and research have emphasized on the importance of developing the English language teacher and training him in modern teaching methods, and a desire of the researcher to contribute in developing the English language teaching skills of teachers through training programs. The current research seeks to design a training program for developing reciprocal teaching skills for secondary school English language teachers.
Questions of the research:
The research seeks to answer the following questions:
- What are the training needs based reciprocal teaching for secondary school teachers of English in Asseer?
- What is the proposed training program based reciprocal teaching for secondary school teachers of English in Asseer?

Objectives of the research:
The researcher aims to determine training needs based reciprocal teaching for secondary school teachers of English, and to propose a training program based reciprocal teaching for secondary school teachers of English in Asseer.

Importance of the research:
The importance of the current research lies in supporting the English language teacher recognizes reciprocal teaching strategy that enables him to develop his performance, and to develop his teaching skills. In addition to proposing a training program aimed at meeting the training needs of English language teachers at secondary school in the light of reciprocal teaching skills.

Terminology of the study:
The training program:
Al-gamal(2017) defined it as "All educational and instructional experiences that are presented in the light of an organized and proposed educational plan that includes objectives, content, methods of teaching and evaluation, and aims to provide workers with teaching skills" (p. 9). The researcher defines it procedurally as: An organized and intended activity that aims at
developing English language teachers's knowledge and improving their teaching skills in the English language subject duringa specific time period.

• Reciprocal Teaching:
  Zaitoun (2003) defined it as "An educational activity that takes the form of a dialogue between teachers and students, or between students with each other, so that they exchange roles according to the sub-strategies included (prediction - questioning - clarification - summarization) in order to understand a written text, and to control this understanding through monitoring " (p. 224). The researcher defines it procedurally as:"An educational activity based a positive dialogue between the teacher of English and the student, and between students with each other towards learning the English language using the stages involved (prediction, questioning, clarification, and summarization).

Theoretical framework
Firstly: Reciprocal Teaching

(A): Advantages of reciprocal teaching:
Reciprocal teaching has several advantages, and the most important of these advantages according to (Zaitoun, 2003; Lindblom, 2000) are:

• Improving academic achievement of students.
• Arousing students’ previous experiences.
• Developing the skill of dialogue and discussion.
• Raising the level of deep understanding among students.
• Helping students gain the following skills:"prediction, questioning, clarification, and summarization".
• Developing social skills.
• Improving the teaching and learning process by generating motivation.
It can be used in accumulated classes.

**(B): The importance of reciprocal teaching**

Studies and research agree on the importance of reciprocal teaching, such as the study of Al-Shuaibi (2006) and Al-Muntashiri (2008). The importance of reciprocal teaching can be summarized as follows:

- Depends on cooperative learning, which leads to providing the appropriate atmosphere for education.
- Based on student work through groups, each student plays a role in the group to which he belongs.
- It works to reduce the teacher's effort and his students on the one hand, and the effort made by the students with each other on the other hand in order to achieve the goal of the lesson.
- Ease of application in different classes and in most subjects.
- Develops the ability for discussion.
- Develops students' ability to predict events.
- Increase students' motivation towards learning.
- Spread fun and joy among students.
- Develops students' ability to summarize.
- Develops students' ability to ask questions.
- Enable Students to gain the skill of eliciting important information from the presented text.

**(C): Teacher's role in reciprocal teaching strategy**

The teacher has several roles to perform during reciprocal teaching, (Sulaiman, 2010) mentioned these roles as follows:

- Modeling the four full stages at the beginning of the lesson, then gradually decreasing his role to pass to the students.
- Organizing the classroom environment and dividing students into heterogeneous cooperative groups.
- Distribution students into (leader - summarizer - questioner - clarifier - predictor).
• Explaining the lesson objectives to students to know what is expected of them.
• Distributing tasks and activity cards to students.
• Directing students to cooperate and participate in all tasks and activities and not to keep any information to themselves because the final score is for everyone.
• Monitoring ongoing conversations and discussions within groups.
• Intervening to facilitate learning when needed.
• Allocating a suitable time to perform the tasks of each paragraph according to its length and degree of difficulty.

second: educational training for in-service teachers:

(A) Definition of educational training for in-service teachers:

Al-Saeed and Saleh (2008) defined in-service teacher training as "A set of experiences that are prepared for teachers in order to develop their competencies and to perform their work better, which helps in achieving training goals or the curricula they are teaching" (p. 10).

Tohri (2016) defines it as “A structured and pre-planned process, aimed at developing the professional competencies of teachers and improving their job performance, by providing a set of strategies, activities, information and skills that are carried out according to specific criteria” (p. 34).

(B) The importance of educational training for teachers during service

The importance of educational training for teachers according to Abd al-Samea and others (2005) is:
• Instructors acquire knowledge, skills, and attitudes directly related to work, which develops their roles.
The learner gains self-confidence, and the ability to work independently.

Training, as a planned and organized effort, helps improving the current and future performance of learners and groups alike.

Training contributes to reducing mistakes; as a well-trained teacher reduces his mistakes.

The trainee acquires new experiences that qualify him to assume greater responsibilities, and may be leadership responsibilities.

Training develops the learner's flexibility and ability to adapt in his working life.

Through training, expenses can be reduced. Increasing skills and competencies leads to a decrease in the percentage of errors in work.

(C): Goals of educational training for in-service teachers

Educational training has several motives for in-service teachers, (Al-Zayyan, 2013) refers to these goals and motives as follows:

Those who join the work for the first time are provided –only- with the theoretical information about that work, So they are in need to a special training in order to raise their level and acquire new skills and knowledge that qualify them to perform work better.

The process of rapid development in science and technology, in addition to the emergence of new technological means needed training order to be able to use them properly in order to adapt to work.

Increasing the effectiveness of the teacher, and providing him with the best methods and the latest educational theories that help him in performing his duties.

Treating deficiencies for those who did not receive a good preparation before enrolling in the teaching profession.
(D): Obstacles in educational training for in-service teachers

Educational training faces some obstacles that limit its success in educational institutions. (UNESCO Regional Office for the Arab World, 2000) listed the obstacles of educational training as follows:

- The disruption of educational policies and the inconvenience of imported and quoted templates to the national circumstances in Arab societies.
- The programs are based on an improvised and descriptive diagnosis, and not on a thorough analysis of the special nature of the educational system and economic reality.
- The absence of an effective organization that adapts the curriculum and prepares teachers to inform the continuous needs of society.
- Lack clarity of goals, or their inadequacy so that there is no clear answer if we ask about what human we want to achieve an appropriate amount of education, and what will be his role in society, and whether the teacher is able to make a difference in society.
- Is the training based on a proper link between thought and work, that is, between theory and practice.

The third dimension: training needs: Definition, importance, characteristics, types, ways of determining:

First: Definition of training needs

Al-Lokani and Al-Jamal (2013) defined the training needs as "A set of changes and developments that must be achieved in teachers' information, skills, and directions to make them able to perform their educational work, and to improve the level of their job performance, which in turn contributes to improving the quality of learning" (p. 10).
Abu al-Hasan (2016) defines it as “the knowledge, skill, and attitudes that must be developed in learner’s behavior or providing it to the teacher, with the aim of improving performance, increasing productivity, or developing a specific behavior, as it is the difference between the actual reality of teacher performance and the desired reality” (p. 65).

**Second: The importance of identifying training needs**

Al-Dahshan (2017) stated the importance of identifying training needs, as follows:

- The determination of training needs is the basis for all the elements of the training process, designing the content and activities of the training program, and evaluating training programs. Identifying training needs is an indicator that guides training in the correct direction of these sub-processes.
- Identifying training needs helps to focus on good performance and the primary goal of training.
- Identifying training needs clarifies the learners to be trained, the type of training required, and the expected results from them.
- Wasting time, effort and money in the absence of identifying training needs or inaccurately identifying them.

**Third: Designing educational training programs for teachers during service**

The importance of designing training programs is to achieve the training goals, as it is an effective activity through which the training needs are fulfilled, as it is the main entrance to the process of designing a training plan that is designed based on the revealed training needs (Abbas, 2007). The training program is the tool that links the training needs, the goals required of the program, resources, methods, and training topics with each other in a regular relational manner, and this is
what the training program design process is based on. If we follow the steps and procedures that follow this design process, we would realize that there is agreement between books and scholars, which Qashtan (2007) summarized as follows:

- Determining the objectives of the training program.
- Defining the topics of the training program.
- Determining methods, aids, and techniques appropriate for training.
- Determining the appropriate place for training.
- Selecting the participants in the program, and the standards that must be met for them to join it.
- Selecting competent trainers.
- Preparing the training budget.
- Determining the evaluation tools, their types and times, methods of analyzing, and employing their results.

Procedures of the research:

Methodology of the research:

The research employed the analytical descriptive method through which training needs for secondary school teachers of English are identified in light of reciprocal teaching skills, and then analyzed, to identify training needs for research and to design the proposed training program in light of them.

Population and participants of the research:

Population of the current study consists of all English language teachers at secondary school in Asseer region. Participants were (315) teachers of English language at secondary school in Asseer region.

Tools of the research:

Based on the nature of the data, and based on the method used in the study, a questionnaire was designed to determine the training needs of secondary school
English language teachers in light of reciprocal teaching skills according to the following steps:

**Building the Tool:**

The study tool was built with reference to literature and previous studies related to the subject of the study. The study tool consisted - in its final form - of two parts: first: It deals with participants' primary data such as: academic qualification, type of educational qualification, number of years of experience. second: It consists of (45) items dealing with the training needs based reciprocal teaching among teachers of English language. They are distributed on three dimensions. The first: It deals with the training needs related to lesson planning, and it consists of (13) items. The second: It deals with the training needs related to implementation of the lesson, and it consists of (23) items. The third: It deals with training needs related to evaluation, and it consists of (9) items.

**Validity of the study tool:**

**Face validity (validity of Jury):**

After designing the study tool, which deals with "A Proposed Training Program for Developing Reciprocal Teaching Skills For Secondary School English Language Teachers", it was presented to a number of jury in order to guide their views. The jury were kindly asked to express their opinion about "items clarity" and the relevance of what they were designed for, and suitability of the items for the dimension to which they belong. Modifications and suggestions through which the questionnaire can be developed were taken into consideration.

**Internal consistency validity:**

The researcher applied the questionnaire to an exploratory sample consisting of (315) teacher. Using
the sample data, the researcher calculated the Pearson correlation of coefficient to measure the internal validity of the questionnaire. The correlation coefficient was calculated between the degree of each item by the total degree of the dimension that the item belongs to, as shown in the following tables.

Table (1): Pearson correlation of coefficients for items (training needs based reciprocal teaching among English language teachers) with dimension total score

| Lesson planning skills | Lesson implementation skills | Evaluation skills |
|------------------------|-----------------------------|------------------|
| Item | Correlation coefficient | Item | Correlation coefficient | Item | Correlation coefficient |
| 1 | 0.625** | 14 | 0.772** | 1 | 0.744** |
| 2 | 0.701** | 15 | 0.587** | 2 | 0.615** |
| 3 | 0.708** | 16 | 0.758** | 3 | 0.709** |
| 4 | 0.595** | 17 | 0.670** | 4 | 0.661** |
| 5 | 0.602** | 18 | 0.502** | 5 | 0.490** |
| 6 | 0.622** | 19 | 0.731** | 6 | 0.524** |
| 7 | 0.652** | 20 | 0.469** | 7 | 0.575** |
| 8 | 0.731** | 21 | 0.554** | 8 | 0.466** |
| 9 | 0.691** | 22 | 0.524** | 9 | 0.629** |
| 10 | 0.698** | 23 | 0.544** | - | - |
| 11 | 0.495** | - | - | - | - |
| 12 | 0.590** | - | - | - | - |
| 13 | 0.698** | - | - | - | - |

** Significant at the level of 0.01

Table (1) clarifies that all dimension items are significant at the level of (0.01), where correlation of coefficients values for the dimension "lesson planning skills" ranged between (0.499, 0.731), and for the dimension "lesson implementation skills" between (0.496, 0.792), and for the dimension "Evaluation skills" between (0.466, 0.744), all of which are accepted correlation coefficients, and this is an indication of high coherence coefficients, as it indicates high and sufficient validity indicators that can be trusted in the application of the current study tool.

Table (2) clarifies that all dimensions are significant at the level of (0.01), where the values of correlation coefficients for the dimensions ranged between (0.791
and 0.907), which are accepted correlation coefficients, and this is an indication of high coherence coefficients, as it indicates high and sufficient validity indicators that can be trusted in the application of the current study tool.

Table (2) Pearson correlation of coefficients for the dimension items (training needs based on reciprocal teaching among English language teachers) with the dimension total score

| Dimension                | Correlation of coefficient |
|--------------------------|----------------------------|
| lesson planning skills   | 0.847**                    |
| lesson implementation skills | 0.907**                  |
| Evaluation skills        | 0.791**                    |

** Significant at the level of 0.01

(C) Reliability of the study tool:
The researcher calculated reliability using Cronbach's Alpha reliability coefficient, Table (3) shows reliability coefficient for the dimensions of the study tool, as follows:

Table (3) Cronbach's Alpha for reliability of the study tool

| N  | Dimension                  | Number of items | Reliability coefficient |
|----|----------------------------|-----------------|-------------------------|
| 1  | lesson planning skills     | 13              | 0.939                   |
| 2  | lesson implementation skills | 23              | 0.953                   |
| 3  | Evaluation skills          | 9               | 0.904                   |
|    | Total reliability          | 45              | 0.966                   |

Table (3) clarifies that the study questionnaire has a statistically acceptable reliability, where the value of the total reliability coefficient (alpha) reached (0.966) which is a high degree of reliability, as the consistency coefficients of the study tool ranged between (0.904 and 0.953) which indicate high reliability indicators that can be trusted in the application of the current study tool.

Statistical methods used in the current study:
A number of appropriate statistical methods were used using the Statistical Package for Social Sciences which is denoted by the abbreviation (SPSS), then the following statistical methods were calculated:
• Frequencies and percentages to identify the functional characteristics of participants.
• Pearson Correlation coefficient to calculate the validity of the internal consistency of the study tool.
• Cronbach's Alpha to calculate the reliability coefficient of the different dimensions of the study tool.
• "Mean" to know to what extent responses of participants are high or low than the main dimensions (items averages). Taking into consideration that it is useful in arranging dimensions according to the highest mean.
• "Standard Deviation" was calculated to identify the extent to which participants' responses to each item deviated from the study variables items, and for each of the main dimensions of their mean. It is notable that the standard deviation clarifies the dispersion in participants' responses for each of the items of the study variables, in addition to the main dimensions. The closer value from zero, the responses focus and the dispersion decreases in the questionnaire.

Results, Explanation and Discussion:

What are the training needs based reciprocal teaching for secondary school teachers of English in Asseer?

Frequencies, percentages, means, and standard deviation of participants' responses were calculated to determine the training needs based reciprocal teaching for secondary school teachers of English in Asseer.

Table (4) Means, and standard deviation of participants' responses about the training needs based reciprocal teaching for secondary school teachers of English in Asseer

| N  | Reciprocal teaching skills     | Mean  | Standard Deviation | Rank |
|----|--------------------------------|-------|--------------------|------|
| 1  | lesson planning skills         | 3.60  | 0.73               | 1    |
| 2  | lesson implementation skills   | 3.52  | 0.75               | 2    |
| 3  | Evaluation skills              | 3.52  | 0.77               | 3    |
|    | Total reliability              | 0.68  | 3.55               | -    |

Table (4) clarifies that the dimensions of training needs based reciprocal teaching for English language teachers in Asseer included (3) dimensions. They are
respectively arranged according to their mean: (Evaluation skill, Lesson planning skill, Lesson implementation skill. All items came with a "high" training need level; Mean of these dimensions ranged between (3.52, 3.60); These are values in the fourth category of the five-step scale, which indicates a degree of training need (high).The general mean of the dimensions is (3.55, 5.0), with a standard deviation (0.68), and this indicates that there is a high degree of agreement among participants on the training needs based reciprocal teaching among English language teachers at secondary school in the southern region, where the skill of "evaluation" comes the first skill with an overall mean (3.60) and a standard deviation (0.73), followed by the skill of "lesson planning" with mean (3.52) and standard deviation (0.75).

Finally, the skill of "lesson implementation" which comes as the least teaching skills as a teaching need among English language teachers at secondary school with a mean (3.52) and a standard deviation (0.77). This may be due to the importance of educational training in enhancing teachers'skills and competencies related to reciprocal teaching.

The following tables discuss -in some detail- the training needs based on reciprocal teaching for secondary school English language teachers in the southern region; as follows:

Training needs of English language teachers related to lesson planning skill

To determine the training needs of English language teachers related to lesson planning skill; Frequencies, percentages, mean and standard deviation were used for the participants'responses, and the items were arranged according to arithmetic mean for each of them, as follows:
Table (5): Frequencies, percentages, mean and standard deviation of participants’ responses about the training needs of English languageteachers related to lesson planning skill

| N | Items                                                                 | Degree of need | M  | S.D | Rank |
|---|----------------------------------------------------------------------|----------------|-----|-----|------|
|   |                                                                      | very high | high | moderate | low | Very low |       |
|   |                                                                      | F   | %    | F   | %    | F   | %    | F   | %    |       |
| 1 | Determining learning outcomes for teaching English in specific and   | 122 | 38.7 | 126 | 40.0 | 52  | 16.5 | 12  | 3.8  | 3     | 1.0  | 4.12 | 0.88 | 1 |
|   | measurable terms.                                                    |       |      |     |      |     |      |     |      |       |      |      |      |    |
| 2 | Determining stages of reciprocal teaching.                           | 42  | 13.3 | 133 | 42.2 | 100 | 31.7 | 36  | 11.4 | 4     | 1.3  | 3.55 | 0.91 | 3 |
| 3 | Determining educational methods that are appropriate for            | 64  | 20.3 | 104 | 33.0 | 97  | 30.8 | 45  | 14.3 | 5     | 1.6  | 3.56 | 1.02 | 2 |
|   | reciprocal teaching.                                                 |       |      |     |      |     |      |     |      |       |      |      |      |    |
| 4 | Determining methods for preparation to                              | 50  | 15.9 | 110 | 34.9 | 115 | 36.5 | 32  | 10.2 | 8     | 2.5  | 3.51 | 0.96 | 5 |
|   | reciprocal learning appropriately.                                   |       |      |     |      |     |      |     |      |       |      |      |      |    |

|   | reciprocal teaching.                                                 |       |      |     |      |     |      |     |      |       |      |      |      |    |

General mean 3.52 0.75 -
Table (5) clarifies that the dimensions of training needs for English language teachers related to "lesson planning" skill consists of (13) items. (12) items came with a "high" training need level, while one item came with a (moderate) training need which is (13). Mean of the dimension items ranged between (3.36, 4.12). The previous result indicates that participants' responses to the items of training need degree range from (medium - high). The standard deviation of items ranged between (0.88 and 1.07). They are values near around "one", and this indicates the homogeneity of participants' responses on the items of this dimension of training needs of English language teachers related to the skill of "lesson planning".

The general mean for the dimension items was (3.52) with a standard deviation (0.75), and this indicates that there is a high degree of agreement among participants on the training needs of English language teachers related to lesson planning skill, and among the most prominent of these skills (Determining learning outcomes for teaching the English language in specific and measurable terms, as well as identifying educational methods that are appropriate for reciprocal teaching, in addition to identifying steps for implementing reciprocal teaching of an English language lesson, and designing evaluation methods in a manner that takes into account learner differences between students).

Lesson implementation skill

To determine the training needs of English language teachers related to lesson implementation skill; Frequencies, percentages, mean and standard deviation were used for the participants' responses, and the items were arranged according to arithmetic mean for each of them, as follows:
Table (6): Frequencies, percentages, mean and standard deviation of participants’ responses about the training needs of English language teachers related to implementation lesson skill

| N | Items                                                                 | Degree of need | M   | S.D   | Rank |
|---|------------------------------------------------------------------------|----------------|-----|-------|------|
|   |                                                                        | very high | high | moderate | low | Very low |
| 1 | Preparing the lesson in an interesting and effective way.             | 116         | 36.8 | 99     | 31.4 | 81     | 25.7 | 16 | 5.1 | 3 | 1.0 | 3.98 | 0.96 | 1 |
| 5 | Creating exciting questions for students that make them in the process of continuous thinking during the lesson. | 77          | 24.4 | 98     | 31.1 | 93     | 29.5 | 35 | 11.1 | 12 | 3.8 | 3.61 | 1.09 | 2 |
| 13| Determining the relationship between the components of the lesson and its title. | 64          | 20.3 | 106    | 33.7 | 98     | 31.1 | 39 | 12.4 | 8 | 2.5 | 3.57 | 1.03 | 3 |
| 3 | Dividing students into groups, taking into account learner differences. | 57          | 18.1 | 119    | 37.8 | 93     | 29.5 | 31 | 9.8 | 15 | 4.8 | 3.55 | 1.05 | 4 |

| 9 | Thinking of all possible questions on the topic to be taught.         | 59          | 18.7 | 106    | 33.7 | 102    | 32.4 | 39 | 12.4 | 9 | 2.9 | 3.53 | 1.02 | 6 |
| 17| Identifying the important elements of the topic.                      | 64          | 20.3 | 97     | 30.8 | 103    | 32.7 | 45 | 14.3 | 6 | 1.9 | 3.53 | 1.03 | 7 |
| 21| Encouraging students to group-work to complete tasks.                 | 68          | 21.6 | 81     | 25.7 | 117    | 37.1 | 46 | 14.6 | 3 | 1.0 | 3.52 | 1.02 | 8 |
| 22| Developing students' discussion skills.                                | 61          | 19.4 | 99     | 31.4 | 106    | 33.7 | 42 | 13.3 | 7 | 2.2 | 3.52 | 1.02 | 8 |
| 19| Reforming the text in the students' own style.                        | 65          | 20.6 | 93     | 29.5 | 103    | 32.7 | 49 | 15.6 | 5 | 1.6 | 3.52 | 1.04 | 10 |
| 8 | Formulating hypotheses related to the field of reciprocal teaching.   | 60          | 19.0 | 99     | 31.4 | 104    | 33.0 | 45 | 14.3 | 7 | 2.2 | 3.51 | 1.03 | 11|
| 11| Applying all the knowledge and information that students have in order to answer these questions. | 55          | 17.5 | 107    | 34.0 | 101    | 32.1 | 46 | 14.6 | 6 | 1.9 | 3.50 | 1.00 | 12 |
| 7 | Registering student expectations on the subject of the lesson.        | 47          | 14.9 | 121    | 38.4 | 102    | 32.4 | 32 | 10.2 | 13 | 4.1 | 3.50 | 1.00 | 12 |
| 20| Motivating students to continuous self-learning of the English language. | 55          | 17.5 | 104    | 33.0 | 109    | 34.6 | 37 | 11.7 | 10 | 3.2 | 3.50 | 1.01 | 14 |
| 23| Encouraging students to speak                                        | 56          | 17.8 | 90     | 28.6 | 125    | 39.7 | 41 | 13.0 | 3 | 1.0 | 3.49 | 0.96 | 15 |
Table (6) clarifies that the dimensions of training needs for English language teachers related to "lesson implementation" skill consists of (23) items. (22) items came with a "high" training need level, while one item came with a (moderate) training need which is (2). Mean of the dimension items ranged between (3.34, 3.98). The previous result indicates that participants' responses to the items of training need degree range from (medium - high). The standard deviation of items ranged between (0.96 and 1.09). They are values near around "one", and this indicates the homogeneity of participants' responses on the items of this dimension of training needs of English language teachers related to the skill of "lesson implementation ". The general
mean for the dimension items was (3.52) with a standard deviation (0.77), and this indicates that there is a high degree of agreement among participants on the training needs of English language teachers related to lesson implementation skill, and among the most prominent of these skills (Preparing the lesson in an interesting and effective way, as well as Creating exciting questions for students that make them in the process of continuous thinking during the lesson, in addition to Determining the relationship between the components of the lesson and its title).

**Evaluation skill**

To determine the training needs of English language teachers related to evaluation skill; Frequencies, percentages, mean and standard deviation were used for the participants' responses, and the items were arranged according to arithmetic mean for each of them, as follows:

Table (7) clarifies that the dimensions of training needs for English language teachers related to "Evaluation" skill consists of (9) items. All items came with a "high" training need level. Mean of the items ranged between (3.45, 3.94). The previous result indicates that participants' responses to the items of training need degree range from (medium - high). The standard deviation of items ranged between (0.94 and 1.02). They are values near around "one", and this indicates the homogeneity of participants' responses on the items of this dimension of training needs of English language teachers related to the skill of "Evaluation ". The general mean for the dimension items was (3.60) with a standard deviation (0.73), and this indicates that there is a high degree of agreement among participants on the training needs of English language teachers
related to evaluation skill, and among the most prominent of these skills (Providing diverse and exciting questions for higher-order thinking, as well as Evaluating main learning aspects included in the lesson, in addition to Providing appropriate feedback based on evaluation results and Identifying common mistakes among students).

Table (7): Frequencies, percentages, mean and standard deviation of participants' responses about the training needs of English language teachers related to evaluation skill

| N | Items                                                                 | Degree of need | M | S.D | Rank |
|---|-----------------------------------------------------------------------|----------------|----|-----|------|
|   |                                                                       | very high | high | moderate | low | Very low |                |
|   |                                                                       | F  | %   | F  | %   | F  | %   | F  | %   |      |      |      |
| 7 | Providing diverse and exciting questions for higher-order thinking.  |      |      |      |      |      |      |      |      | 111  | 35.2 | 106  | 33.7 | 75  | 23.8 | 13  | 4.1  | 10  | 3.2  | 3.94 | 1.02 | 1    |
| 1 | Evaluating main learning aspects included in the lesson.             |      |      |      |      |      |      |      |      | 57   | 18.1 | 122  | 38.7 | 97  | 30.8 | 33  | 10.5 | 6   | 1.9  | 3.61 | 0.96 | 2    |
| 5 | Providing appropriate feedback based on evaluation results.          |      |      |      |      |      |      |      |      | 60   | 19.0 | 107  | 34.0 | 111 | 35.2 | 34  | 10.8 | 3   | 1.0  | 3.59 | 0.95 | 3    |
| 3 | Identifying common mistakes among students.                           |      |      |      |      |      |      |      |      | 57   | 18.1 | 115  | 36.5 | 103 | 32.7 | 36  | 11.4 | 4   | 1.3  | 3.59 | 0.95 | 4    |
| 9 | Employing various, appropriate and planned tools.                    |      |      |      |      |      |      |      |      | 57   | 18.1 | 110  | 34.9 | 106 | 33.7 | 41  | 13.0 | 1   | 0.3  | 3.57 | 0.94 | 5    |
| 6 | Using clear, targeted and logical methods to evaluate all students.  |      |      |      |      |      |      |      |      | 62   | 19.7 | 95   | 30.2 | 121 | 38.4 | 32  | 10.2 | 5   | 1.6  | 3.56 | 0.97 | 6    |
| 4 | Benefiting from evaluation results in treating students' mistakes.    |      |      |      |      |      |      |      |      | 57   | 18.1 | 113  | 35.9 | 94  | 29.8 | 47  | 14.9 | 4   | 1.3  | 3.55 | 0.99 | 7    |
| 2 | Diagnosing the difficulties that students face during the lesson.     |      |      |      |      |      |      |      |      | 59   | 18.7 | 98   | 31.1 | 115 | 36.5 | 38  | 12.1 | 5   | 1.6  | 3.53 | 0.98 | 8    |
| 8 | Helping students to self-assess their learning and their colleagues objectively. |      |      |      |      |      |      |      |      | 41   | 13.0 | 111  | 35.2 | 120 | 38.1 | 35  | 11.1 | 8   | 2.5  | 3.45 | 0.94 | 9    |

General mean: 3.60 0.73
What is the proposed training program based on reciprocal teaching for secondary school teachers of English in Asseer?

Through the training needs of secondary school English language teachers in the light of reciprocal teaching skills; The proposed training program was designed in the three dimensions that formed a training need, they are: planning, implementation, and evaluation. The time period for the implementation of the program was set (two days) with eight training hours, and each day contains two training time periods with four training hours (appendix 5). The program was judged and reviewed by the Training and Scholarship Department (Quality and Performance Measurement Department) at the Education Department in Asseer, and some of the experts in the field of curricula and teaching methods. The program included the following procedures:

**Title: A Proposed Training Program for Developing Reciprocal Teaching Skills For Secondary School English Language Teachers.**

**General goal of the program:**
Participant acquires the most important skills needed for reciprocal teaching.

**Detailed objectives:**
At the end of the training program, the trainee is expected to be able to:

- Explain the concept of reciprocal teaching strategy.
- Clarify the principles of reciprocal teaching strategy.
- Explain the importance of reciprocal teaching strategy.
- Explain the work stages during reciprocal teaching strategy.
- Demonstrates the advantages of reciprocal teaching.
strategy.

- Clarify the characteristics of reciprocal teaching strategy.
- Clarify the necessary criteria of reciprocal teaching strategy.
- Acquire reciprocal teaching strategy skills.
- Recognize the teacher's role in reciprocal teaching strategy.
- Recognize the learner's role in reciprocal teaching strategy.
- Implement detailed procedures for the application of reciprocal teaching in its various stages.

The general principles on which the program is based

The current program is based on:

- Preparing the program in light of the reciprocal teaching skills.
- Paying attention to training needs checklist of English language teachers at secondary school.
- Ensuring the teacher 's (trainee) positivity and activity through his interest in achieving the goals of the program.
- Achieving interaction and participation between the trainer and the teachers.
- Linking past experiences of the trained teachers with the current experiences in teaching reality by encouraging them to perform realistic learning educational tasks.
- Combining different methods of training, such as: self-learning, cooperative learning, etc.

Program components:

The program components were defined to achieve the previous goals, and it was taken into consideration that the program builds on the knowledge that teachers possess with addition to it, where the trained teacher
has the knowledge necessary to teach English at secondary school, and the trainer adds training on reciprocal teaching skills.

**How to prepare the program:**

In preparing the program, the researcher relied on the theoretical framework and previous studies in reciprocal teaching skills and in-service teacher training programs.

**Mechanism of activating the program:**

The program is based on the philosophy of active participation between teachers with each other, and with the researcher, during the acquisition and development of English language teaching skills in light of reciprocal teaching skills.

**Techniques used in the program:**

- Lecture and group discussion.
- Cooperation: between the researcher and the teachers.
- Comparison.
- Self-evaluation.
- Feedback.

**The main strategies in the program:**

- Brainstorming.
- Micro-teaching.
- Seminars.
- Lectures.
- Group discussion.
- Practical/field Training.

**Teaching aids used in implementing the program:**

Teaching aids and tools used in the program vary according to the skill being trained, and what contributes to achieving the goals. These tools include:
• computer.
• Data Show.
• Training worksheets.
• Power Point.
• colored pens and papers.
• Paperboard Stand.

The foundations that were used in designing the training program:
• Previous research and studies.
• Reciprocal teaching skills.
• Characteristics of building training programs.
• Training needs.

Target groups of the training program:
Secondary School English Language Teachers.

Trainers:
The program can be carried out by:
• An expert in curricula and teaching methods.
• English Language Supervisor.

Duration of the training program:
• The number of training days for the program (two days).
• The number of training hours for the program is (8) hours.
• The number of training sessions for the program is 4.
• Duration of one session (two hours).

Program design:
The program follows Gerlach and Ely Instructional Design Model as stated by Al-Riyashi (2014) which is best suited to designing the current research program as shown in the following figure:
The training period takes two days, with two training sessions a day. Each session takes two hours, as in the Table (8):

**Findings:**

The current search findings revealed the following:

- There is a high degree of agreement among participants on the training needs based on reciprocal teaching among English language teachers at secondary school in the southern region. "Evaluation skill" comes first among reciprocal teaching skills, followed by lesson planning skill, and came last implementation of the lesson skill as the least teaching skills needed for teachers of English at secondary school.
- There is a high degree of agreement among participants on the training needs for teachers of English related to lesson planning skill.
- There is a high degree of agreement among participants on the training needs for teachers of English related to lesson implementation skill.
- There is a high degree of agreement among participants on the training needs for teachers of English related to evaluation skill.
Table (8) schedule for training program

Recommendation

In light of the current findings, the research recommends the following:

- Adopting a proposed training program for developing reciprocal teaching skills for secondary school English language teachers within the training plans in the professional development centers of the education departments of Ministry of Education.

- Providing the opportunity to English language teachers to complete postgraduate studies (Master - PhD) to enhance their skills and teaching capabilities, as the findings showed that all English language teachers at secondary school in Asseer have only Bachelor’s as academic qualification.

- Paying attention to training English language teachers in the secondary stage continuously, through holding courses, training programs and workshops for training in modern strategies and teaching methods that are appropriate for teaching English language.

- Making reciprocal teaching strategy as a part in field education for prospective teachers, which has an effective role in raising the level of professional development and teaching skills of prospective teachers.

- Analyzing the content of the English language at secondary school, in order to gain knowledge about the best teaching methods that suit the content.

- The necessity of taking into consideration the international standards for language teachers in the twenty-first century, in preparing modern training programs to qualify and train English language teachers before and during service.
• Holding seminars and conferences to discuss the modern and appropriate methods of teaching English by teachers and supervisors.

• Establishing partnerships between education departments, colleges of education, and languages and translation colleges to benefit from studies and research related to teaching English.
