Supplementary Figure S2. Scatter plot of mean reads of major families of bacteria across replicates. Fs = Fucus spiralis, D = dry transplant of Fucus vesiculosus, W = watered transplant of Fucus vesiculosus, PC = procedural control of Fucus vesiculosus, Fv = natural Fucus vesiculosus, Fd = Fucus distichus, WC = water column; H = holdfast, R = receptacle, and V = vegetative. Phyla are shown in bold: Cyano = Cyanobacteria and Marin = Marinimicrobia (SAR406 clade).
