Abstract

The reading ability of students in Indonesia is still low. The lack of students' reading comprehension is generally caused by ineffective strategies used by teachers in teaching reading. Students only do silent reading and are asked to answer questions from the text. This study aims to analyze the use of the RAP strategy to teach reading comprehension in EFL classes. This type of research is qualitative. This research is designed in the form of a literature study or literature study. Sources of data are taken from electronic books (e-books), research articles, and other relevant sources. The collected data is then analyzed through qualitative data analysis. Data analysis activities are carried out interactively, and the fourth stage is data collection, data reduction, data presentation, and inference/verification. The results of the study are that RAP strategies can help students to improve memory about the main ideas and details of specific texts, interactive reading strategies that offer many benefits for students in reading activities can help students in understanding texts as well as their reading comprehension, offering students opportunities to practice content, and can be done quickly by the teacher in the reading class. It can be concluded that the RAP strategy is the right strategy that teachers can use to teach reading in the classroom.

Keywords: RAP Strategy, Reading Comprehension, EFL

Introduction

Reading is one of the crucial aspects of language learning. It is an essential skill since it helps students to acquire knowledge. Reading can improve the general English language skills of the students, namely, vocabulary, speaking and writing skills, ideas, facts, and students’ experience experience (Lai, Chen, & Lee, 2019; Szanto, 2020). Reading is the foundation of all learning processes in today’s classroom (Afrianti & Wirman, 2020; Muhammad, Sholichah, & Aziz, 2019; Warshina, 2016). It means that the other language skills such as listening, speaking, and students will not comprehend writing without reading. In other words, students will face difficulties in acquiring any subjects if they have a low
reading literacy level. Therefore, reading is essential for students because it will help their language acquisition (Asna & Mimi, 2016; Pertiwi, Sumarno, & Dwi, 2019).

The ability of students to understand the content of the text is the primary goal of reading in language learning. Reading for understanding is the primary goal of reading itself (Asna & Mimi, 2016; Astuti & Istiarini, 2020). However, understanding the message or intent of the text is not easy and becomes a problem for students. According to the Program for International Student Assessment or PISA, students' reading ability in Indonesia is still low. Indonesia is ranked 72 out of 77 countries with a score of 371 of the OECD countries' average reading ability of 487 (Astuti & Istiarini, 2020). It means that students' reading comprehension level in Indonesia is still far from the competency standard or expected. Most Indonesian students have difficulty understanding the meaning of sentences, objectives, main ideas, and specific ideas of the text (Fitri, 2019; Rasyid & Asrori, 2013). Understanding textual references from a text is also a problem for students and identifying the primary and specific ideas of the text itself (Suwana, Artini, & Piscayanti, 2013). The lack of students' reading comprehension is generally caused by ineffective strategies used by teachers in teaching reading (Anjani, Dantes, & Artawan, 2019; Maryani, Ichsan, & Khairean, 2017; Pertiwi et al., 2019). Students only do silent reading and are asked to answer questions from the text. This means that the teacher does not provide interesting strategies that improve students' reading comprehension. Therefore, the right strategy is needed by teachers in teaching reading in the classroom.

To the problems above, teachers need to use exciting reading strategies that encourage students' reading comprehension. There are many strategies that can be used by teachers in teaching reading, one of which is the RAP strategy. RAP strategy stands for Read, Ask and Put strategy. A paraphrasing strategy consisting of three steps: "Read the paragraph intensively, Ask yourself what the main idea and specific ideas or details are and Put the ideas into your own words." Furthermore, they argue that the RAP strategy is an effective strategy that can improve students' reading comprehension (Surayati, 2018; Suwana et al., 2013). In practice, students will decode the text, but they will carry out other activities in their reading, such as doing analysis, inferring the meaning of the text, and paraphrasing or pouring the ideas they get from the text into their own words. This strategy promotes a more profound understanding process and allows students to perform and achieve better in their reading (Dahlani & Rahman, 2016; Ni’matuzahroh, 2015). Prosedur The paraphrasing procedure, namely the RAP strategy, can help students improve their memory of the main ideas and details in the text and make predictions about what the text tells.

Reading is a way of learning that improves students' abilities and knowledge by obtaining meaning from specific texts (Antara & Aditya, 2019; Mansyur, 2016). Reading is the ability to understand words and the ability to understand what the text is talking about. In other words, it is a collaborative process in which the reader interacts thoughtfully with the text to get the meaning of the sentence or paragraph of the text (Christianti, 2013; Sari, 2019). It is a complex skill that involves the process of seeing and thinking. Reading is categorized as the most complicated process to understand written texts that include the reader's perceptions and thoughts (Astuti & Istiarini, 2020; Maryani et al., 2017). Students need to understand the text they read to be able to get meaning or understand the text. In reading class, reading activities mostly read reading for comprehension (Muhammad et al., 2019; Pertevi et al., 2019; Warsihna, 2016). Students' skills in understanding the text will guide them to increase their knowledge and make them able to obtain new information. For this reason, students are expected to have the ability to find out whether it is general or specific information from a text. The findings of previous studies also state that the RAP strategy can help students understand the text (Sukma & Haryadi, 2016; Suwana et al., 2013). Other research findings also state that the RAP strategy is effective in learning (Mentari, Sukirlan,
& Nurweni, 2018; Zahra & Fitrawati, 2017). There is no in-depth study on the use of RAP strategies to teach reading comprehension in EFL classes. This study aims to analyze the use of the RAP strategy to teach reading comprehension in EFL classes. It is hoped that the RAP strategy can help students understand the text.

Methods

This type of research is qualitative research. This research is designed in the form of a literature study or literature study. Literature research was conducted to obtain the necessary data through the process of reading library sources. Data sources are taken from electronic books (e-books), research articles, and other relevant sources. The data collected was then analyzed through qualitative data analysis. Data analysis activities are carried out interactively, and the fourth stage is data collection, data reduction, data presentation, and concluding/verification.

Results and Discussion

The Implementation of RAP Strategy, 1) First and Second Meeting. The teacher explains the text, and the teacher trains students to read the text. The teacher asks students to write some tricky words, find the meaning and its synonym. Then, the teacher asks students to make five questions based on the text in which students work in pairs; the teacher selects one group to read their questions. The selected group will choose another group to answer their questions using their own words; the teacher asks students to read another text at home. 2) Third and Fourth Meeting. The teacher gives motivation to students, and the teacher gives another text to students; students will be given time about 10 minutes to read, the teacher asks students to write some tricky words, find the meaning and its synonym, the teacher will select some students to retell the text by using their own words, the teacher asks students to evaluate their learning way in using RAP strategy, asks them the difficulties they faced, their weakness, and the benefit they get.

The RAP strategy has proven to be the right strategy for teaching reading in the classroom for several reasons. The first reason is that the RAP strategy is a reading strategy that supports students to improve their recall of the main ideas and details of a text. The metacognitive strategy based on paraphrasing as the primary point helps students improve their memory about the main ideas and details in the text (Dahlani & Rahman, 2016; Surayatika, 2018). It requires students to text or break it down into smaller units (paragraphs) to remember them. Paraphrasing is a practical understanding strategy that combines students' skills in asking, understanding, and summarizing (Mentari et al., 2018; Zahra & Fitrawati, 2017). By doing this activity in reading, students will be helped process information to understand better the text they read. The RAP strategy is an interactive strategy that is very useful for students in reading. The RAP strategy is beneficial for students because: (1) it can make students active readers. The RAP strategy requires students to actively interact with the text or written material to ask and paraphrase the ideas they get from the text itself. In other words, this strategy involves other activities (asking and putting/paraphrasing) in which students are not passively reading the text (Agathi Dian, Kristiantari, & Ganing, 2015; Warsihna, 2016). (2) Can maintain student concentration. Students must break the text into smaller units (paragraphs) in the reading process to find out the ideas to make students pay attention or focus during reading activities. (3) Can help students to remember information. In addition to the text or breaking it into smaller units, in this strategy, students also emphasize reading the paragraphs intensively in order to find the main idea and details. With text and reading paragraphs in such a way, students will remember what they have read (Surayatika, 2018; Zahra & Fitrawati, 2017).
The RAP strategy helps students to understand the text and emphasize students’ reading comprehension. RAP is one of the strategies that help students to remember what they read. In this strategy, students must read carefully and intensively, asking and paraphrasing or putting the summary to make them more accessible in obtaining information, knowledge, and new vocabulary in entire text or written material (Mentari et al., 2018; Surayatika, 2018). It is a collaborative comprehension strategy that focuses on reading and asking and putting or paraphrasing. Besides, this strategy can also help students retell a story and answer the questions related to the story given in class or task. RAP strategy positively affected students’ reading comprehension, especially for inferential comprehension questions (Hagaman & Reid, 2018; Kemp, 2017). All of the participants in his study, in which three fourth grade students, either maintained reading comprehension or continued improving their reading comprehension two months after the intervention. From this, it can be said that the RAP strategy could increase students’ reading comprehension effectively when it is applied in the instructional process. This strategy positively affects low-achieving students (Leidig et al., 2018; Surayatika, 2018). It will make these students able to progress well in their learning, and their comprehension skill is slightly improved.

The RAP strategy provides an opportunity for students to practice the content of the given text. As already mentioned before, the RAP strategy requires students to read the given text and do other activities such as analyzing, inferring, and paraphrasing the meaning of the text (Dahlani & Rahman, 2016; Surayatika, 2018). Students are facilitated to become independent in comprehending the text. Not only that, but RAP also gives students a chance to increase their reading comprehension in which they can play with their imagination. It will make students more creative in rephrasing. Therefore, RAP is a strategy that develops students' background knowledge besides enhancing their reading skills. The use of the RAP strategy could promote reading comprehension, in which the use of this strategy can make students become active and motivated in participating in the classroom. The RAP strategy is a reading strategy that can be used easily by the teacher in the classroom. It is a simple strategy that can adapt or be adapted in many different functions and activities. It can be used in different levels of education (Leidig et al., 2018; Mentari et al., 2018).

Conclusion

The RAP strategy is an appropriate strategy that teachers can use to teach reading in the classroom because it helps students to improve memory about the main ideas and details of specific texts, interactive reading strategies that offer many benefits for students in reading activities can help students in understanding the text as well as their reading comprehension, offering students with opportunities to practice content, and can be done quickly by teachers in reading classes.
