Withdrawal:
Maternal embryonic leucine zipper kinase (MELK) reduces replication stress in glioblastoma cells.

Cenk Kig, Monique Beullens, Lijs Beke, Aleyde Van Eynde, Johannes T. Linders, Dirk Brehmer, and Mathieu Bollen

This article has been withdrawn by the authors. Following the identification of duplications in Figs. 2A, 4C, and 5A, E, and G, the senior authors found that additional panels were not consistent with the primary data. Confronted with these findings, the first author declared randomly choosing some data during final figure assembly. We deeply regret the circumstances and offer our sincere apologies to the scientific community.
