**Figure, Supplemental Digital Content 1.** Disease-free survival curves among Stages I and II patients showing A) no significant differences between patients with Bd3 and Bd1 or Bd2; B) worse disease-free survival for patients with PDC G3 than for patients with PDC G1 or PDC G2; C) no significant differences for patients with TTL ≥ 6,000 copies/µL. TB: Tumour budding; H&E: haematoxylin and eosin; PDC: poorly differentiated clusters; TTL: total tumour load.
