**Supplemental Figure 1.** Mean “total use” acute headache medication days per month in patients with migraine and self-reported history of aura (PROMISE-1 and PROMISE-2 pooled efficacy population)

Acute headache medications (AHMs) included combination analgesics, ergotamine, opioids, simple analgesics, and triptans.

*a*If multiple drug classes were taken on a single day, day was counted for each drug class (a single day could be counted more than once).
