Supplemental Figure 1. Lung histopathology, collagen and vimentin expression at one week after rIL-10 treatment (3 doses over 2 days) following LPS exposure. Representative H&E (A panel), Masson’s trichrome for collagen content (B panel), and vimentin (green) with nuclei (DAPI, blue) (C panel) stained lung section images from both treatment groups (N=5 mice/group). Line scale is 100 μm.
