Supplementary Information

Fig. S1. LCMS spectrum of CHO-ONB-Br

Fig. S2. LCMS spectrum of CHO-ONB-CHO

LCMS data was analyzed on Schimadzu, LCMS 8045 and the samples were dissolved in THF (1 mgml⁻¹). UV spot light source was used.
The LCMS data for -CHO-ONB-Br depicted the presence of characteristic bromine isotopic peaks\textsuperscript{36} at 364 and 362 of equal intensity and the peaks for -CHO-ONB-CHO was confirmed at M/z 404.1, 405.1.
