Corrigendum

Regarding the paper ‘Individual and contextual factors influencing patient attrition from antiretroviral therapy care in an urban community of Lusaka, Zambia’ by Maurice Musheke, Virginia Bond and Sonja Merten

Published in Journal of the International AIDS Society Supplement 1. Citation: http://www.jiasociety.org/index.php/jias/article/view/17366 | http://dx.doi.org/10.7448/IAS.15.3.17366

The categories in Table 1 are not clear. The correct table is displayed below

Table 1. Characteristics of PLHIV who stopped treatment

| Characteristic (n = 25) | Number of PLHIV |
|------------------------|-----------------|
| **Age**                |                 |
| 18–24 years            | 5               |
| 25–34 years            | 11              |
| 35–44 years            | 3               |
| > 44 years             | 6               |
| **Sex**                |                 |
| Male                   | 8               |
| Female                 | 17              |
| **Marital status**     |                 |
| Single                 | 4               |
| Married                | 12              |
| Divorced/separated     | 7               |
| Widowed                | 2               |
| **Source of livelihood** |             |
| Formal employment      | 4               |
| Informal employment    | 15              |
| Not working/dependant  | 6               |
| **Duration on treatment** |           |
| &lt;12 months          | 8               |
| 1–&lt;2 years          | 6               |
| 2–&lt;3 years          | 6               |
| 3–&lt;4 years          | 2               |
| &gt;4 years            | 3               |
| **Duration not on treatment (up to time of interview)** | |
| 6–&lt;12 months        | 10              |
| 1–&lt;2 years          | 8               |
| 2–&lt;3 years          | 5               |
| 3–&lt;4 years          | 2               |
